

JULY, 2011

Product Update

Dear Customer

As the Analytical Science industry continues to develop, gas chromatographers are moving towards integrated systems that provide flexibility in their GC methods. In response to this trend, SGE recently launched the microfluidic SilFlow™ platform which facilitates a broad range of GC functions such as Backflush, Dean's Switching and column or sample splitting.

A consequence of these evolving GC methodologies has been reduced demand for a number of SGE's GC Accessories. While these accessories have served scientists well for many years, SGE has made the decision to discontinue the manufacture of the products listed below, effective December 31, 2011. SGE will continue to support owners of these instruments with technical support and replacement parts until 2018.

Instrument	Part Number
Pyrojector II	095000
Olfactory Detector Outlet (ODO II)™	093510
MS NoVent II™	113440
gc-Backflush	093352
Air Sharp™	093390
MDS 6890™	0933490 and 0933491
Unitrex	0932900 and 0932902

SGE will continue to innovate and provide new solutions for the GC user whether it is a smart SilTite™ connection to simplify your chromatography, or a microfluidic SilFlow™ solution for complex multi-dimensional separations. For further information please contact your local SGE office.
