

# QORE PERFORMANCE

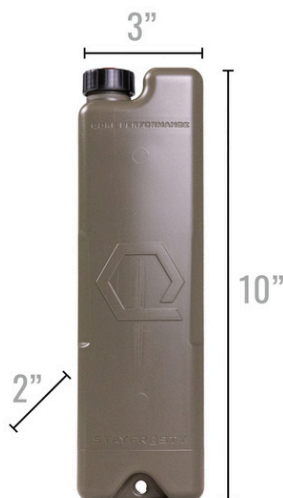

HEAT INJURY PREVENTION SOLUTIONS FOR ENTERPRISE + GOVERNMENT

## ICEFLASK

COOLING | HEATING | HYDRATION

**ICEFLASK** is a 16.9oz/500ml water bottle that also delivers 23 watts of conductive cooling or 17 watts of conductive heating to end-users by matching the dimensions of a PRC-152 MBITR radio, fitting seamlessly into NATO -152 radio pouches. Conceived by Felix of Redbeard Tactical, it enhances warfighter performance and mounts to **ICEPLATE EXO® Gen 3** or any plate carrier with Velcro loop fields using the ICEFLASK Wing Holster, or MOLLE surfaces via the ICEFLASK MOLLE Holster. ICEFLASK is also ideal for civilian activities like camping, hiking, over-landing, and tailgating, replacing disposable "sacrificial bags of ice" with a reusable, sustainable solution. This versatile tool provides personal cooling, heating, and hydration when worn, and serves as a stackable, durable cooling or heating block for coolers and insulated bags, excelling in both tactical and outdoor settings.

"Even limited wear of active cooling systems during rest breaks results in physiological improvement. Systems like those marketed by Qore Performance allow users to achieve superhuman efforts by extended tolerance even during heavy exertional efforts!"

-Dr. Erik Patton, Thermal Physiology + The Environment
