

SATRAD iSeries GoKit

Network Innovations' SATRAD GoKits enable reliable communication where traditional landlines are costly, unavailable or susceptible to hazardous natural or man-made events.

Applications

- Unattended radio repeater to provide cost effective radio coverage for search and rescue operations
- Portable kit for emergency deployment when terrestrial infrastructure becomes unavailable
- Temporary communications hub for rapid temporary deployment

Communications on the Move

The communications backhaul utilises a portable L-Band solution with a compact antenna. L-Band is a frequency that can withstand harsh weather conditions. This is an important consideration when setting up communications infrastructure suitable for disaster or maritime applications.

GoKit Features

SATRAD Go Kits provide many options and features including:

- IP67 enclosure
- Hot swap battery pack capability
- Compatible with SATRAD Battery Packs
- Handset with illuminated LCD display
- Integrated 10-watt amplifier with speaker
- AC power supply
- Integrated radio capability
- Compact size
- Lightweight
