Made in Ireland

Manufactured in  
GMP Certified Facilities

Sugar Free

Gluten Free

No artificial colours  
or flavours

## Benefits of taking Revitalive Food Supplement Oral Sprays

**Convenient** – Taking your daily dose of vitamins has never been easier. Revitalive is perfect for the everyday consumer to lead a healthier lifestyle. Our supplements can be taken on the move and in a matter of seconds. This is a far easier option than tablets, capsules and powders.

**Easy to swallow** – Surveys show that approximately 40% of people have difficulty swallowing tablets and capsules. This can also be a difficult task for people with sensory issues. Revitalive is the perfect option to maintain daily vitamin requirements without the added stress of swallowing tablets and capsules.

**Better Absorption** – Every person absorbs supplements differently. However, according to research when taking tablet supplements only 10% to 20% of the vitamins and minerals get absorbed into the bloodstream. Meanwhile, the body will take in over 90% of a liquid supplements. This is because a swallowed pill first passes through the harsh environment of the stomach and must be metabolized through the liver or kidneys. Stomach acid can destroy a portion of the nutrients in supplements, and any toxic build up in the liver also impedes absorption. When you use a Revitalive spray, it gets absorbed directly into the bloodstream through the vascular tissue in your mouth. The result is your body absorbs the substance faster and more efficiently.

**Cleaner Ingredients** - Capsules and tablets usually contain fillers, binding agents, and artificial colouring, as well as gelatine and the other ingredients that make up the capsule itself. Revitalive supplements contain fewer and cleaner ingredients that include the vitamins, water, and natural flavouring.

**Easier on the Stomach** - Many people avoid taking supplements because they tend to upset their stomach. Revitalive sprays bypass the stomach for better absorption without the worry of stomach discomfort.
