

# Creating jump cells

Jump cells allow a user to move between different pages in a grid set.

In Edit mode, click on an empty cell and **Create Cell**. Click **Jump** to then **OK**.

Find the desired grid in the list, select it and click **OK** to create the jump cell.

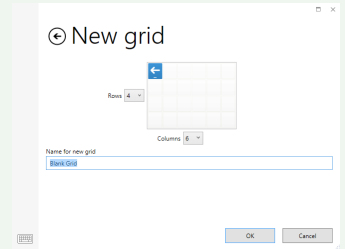

## ★ Tip

You can quickly make or edit a jump cell with **Ctrl+J**.

# Creating jump cells

## Jump to a new grid

Click **New Grid**, select the number of rows and columns, give the grid a name and click **OK**. New grids will always contain a jump back cell.

## Jump to a copy of an existing grid

To use an existing grid as a template for a new one, select the grid, click **Copy Grid**, give the new grid a name and click **OK**.

## Jump home or jump back

These two special jump cells will take the user either to their home grid, or the grid they were on previously.

## ★ Tip

Use Follow Jump to navigate to your new grid without leaving Edit mode. You can also follow a jump with **Ctrl+F**.
