

Word lists offer a convenient way of quickly adding words or phrases to a grid, using cells which automatically populate from a list.

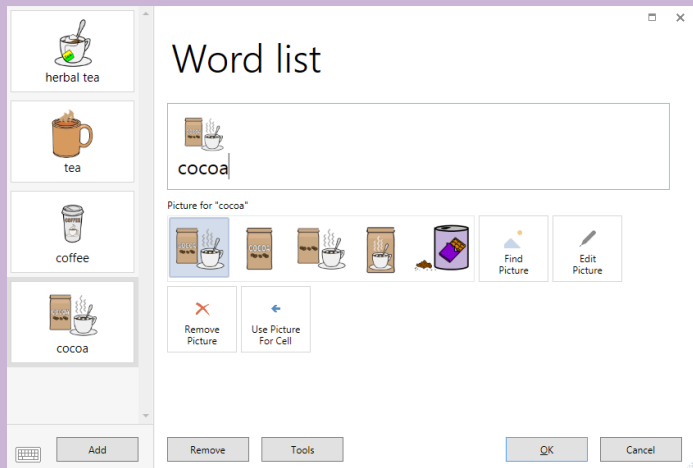

Creating a word list

Highlight all the cells which will be populated by your word list, click **Create Cell** and select **Word List** from the Chat and Writing category, and click **OK**. Select any of your blank word list cells and click **Edit**.

Start typing the words for your list, pressing **Enter** after each one. You can choose alternative pictures with **Find Picture**.

The order of words can be changed by dragging them up or down the list.

If your list is longer than the number of cells available, a **More** cell will automatically appear allowing you to scroll through more content.

★ Tip

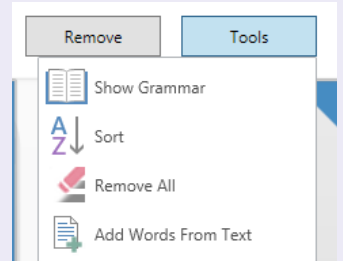

Word lists can easily be modified 'on the go' without even entering edit mode. Tap on the menu bar, then **Word List**.

Add words from text

You can create a word list using text from a web page, email, document or anywhere else. Highlight the text and copy it to the clipboard.

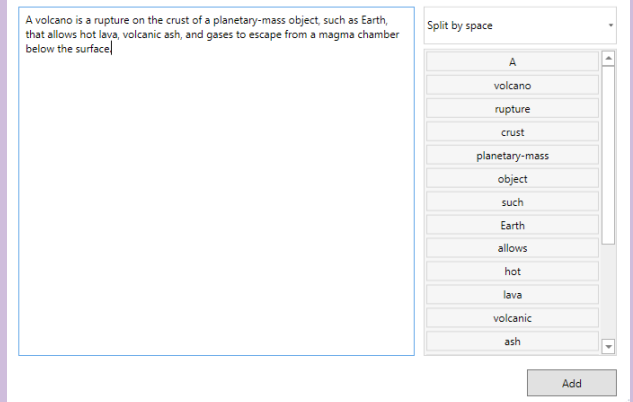

Begin editing your word list, and click on **Tools**, then **Add Words From Text**.

Right click in the blank text area, and **Paste**.

Choose whether you want to split the text after each line or each space.

← Add Words From Text

Once you are happy with your list, click **Add**. You can now change pictures and modify the order if necessary, then click **OK**.

★ Tip

Small words such as 'is' and 'the' are automatically removed. You can remove any other unwanted words manually by highlighting them in the text area and pressing delete.
