

# Setting up your accounts

To be able to send your grids to Grid Player (our free iOS app) or to Online Grids you will need to sign in to a Smartbox Account.

To enable others to edit your grids remotely, you will need to sign in to both a Smartbox account and a Dropbox account.

Click on **Settings** in the Menu bar, and then **Accounts**.

Click on the Smartbox icon. If you already have a Smartbox account, click **Existing Account**. If not, click **New Account**.

## Existing account

Enter the email address associated with your Smartbox account and your password, and **Sign In**.

## New account

Enter your email address, then choose and confirm your password. Click to confirm that you agree to our terms of use and privacy policy (click on the links to read them) and then **Create Account**.

A screenshot of the "Sign up" form. It features a back arrow icon and the title "Sign up". Below the title are three input fields: "Email", "Password", and "Confirm password". At the bottom, there is a checkbox labeled "No" followed by the text "I agree to the [terms of use](#) and [privacy policy](#)". At the very bottom right, there are two buttons: "Create Account" and "Cancel".

# Linking a Dropbox account

Dropbox is a free service which allows you to store your files online, and keep them in sync across devices. Grid 3 uses Dropbox to allow Remote Editing of grid sets.

On the **Accounts** settings page, click on **Dropbox** and then **Connect**:

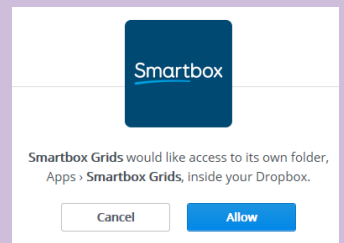

If you already have a Dropbox account, sign in with your email address and Dropbox password.

If you don't have an account, click on the link at the bottom to create one.

A white rectangular form with a light purple border. At the top, it says 'Sign in to Dropbox to link with Smartbox Grids'. Below this are two input fields: 'Email' and 'Password'. Under the 'Email' field is a blue link that says 'Forgot your password?'. To the right of the 'Password' field is a blue button that says 'Sign in'. At the bottom of the form is a blue link that says 'New to Dropbox? Create an account'.

You will now need to allow Grid 3 access to its own folder inside your Dropbox – this is where your grid sets will be stored for Remote Editing. Click on the **Allow** button.

Now that your accounts are set up, you are ready to share your grid sets to Grid Player and Online Grids and your grid sets are ready to be edited remotely.
