

# Controlled Drug Ordering

Order your CD prescriptions &  
track the flow of medicine

# What is CD Ordering?

---

One of our newest features in our Web Tracker solution is Controlled Drug Ordering and Tracking. The system is fully functional across UH Bristol NHS Foundation Trust as of June 2020.

This product in Web Tracker allows for ordering of controlled drugs as well as managing stock and tracking controlled medicines. This allows you to process orders safely and track deliveries up to its destination in a full digital solution.

# CD Ordering's Main Features

- 1** | Book in prescriptions
- 2** | Schedule prescriptions
- 3** | Track prescriptions
- 4** | View outstanding orders
- 5** | Add comments to CD orders
- 6** | Safety check via authorisation
- 7** | Download or print delivery lists
- 8** | Order and track CD stock straight from the system

# From Arrival to Destination

---

## Step 1

Book in your prescriptions

## Step 2

Print your label and place it on the specific prescription

## Step 3

Track deliveries as they are scanned with bluetooth wireless scanners throughout their journey

# What our customers say

---

“ At UH Bristol we do Controlled Drug checks for each ward. This is done at night. Previously any shortages for medicines would be written in our carbon book. There usually would be towers of books waiting in dispensaries. The implementation of these shortages would usually happen late morning, early afternoon. With the implementation of Web Tracker we’ve seen a massive productivity change where those medicine are dispensed by 11am rather than being ordered by 11am. It’s a big revelation. You just save yourself the transition time of getting the book down to pharmacy.

**- Finbarr Canney, Clinical Informatics Pharmacist at  
University Hospitals Bristol and Weston NHS Foundation Trust**

# Benefits of using CD Ordering

*Sits alongside other software products which can result into savings of £15,000 in license fees*

---

*Removes the need for CD ordering book*

---

*Use on desktop, laptop, tablet or mobile*

---

*In comparison to paper-based system, Controlled Drugs are dispensed approximately 2-3 hours earlier each day*

# Easily locate your prescriptions

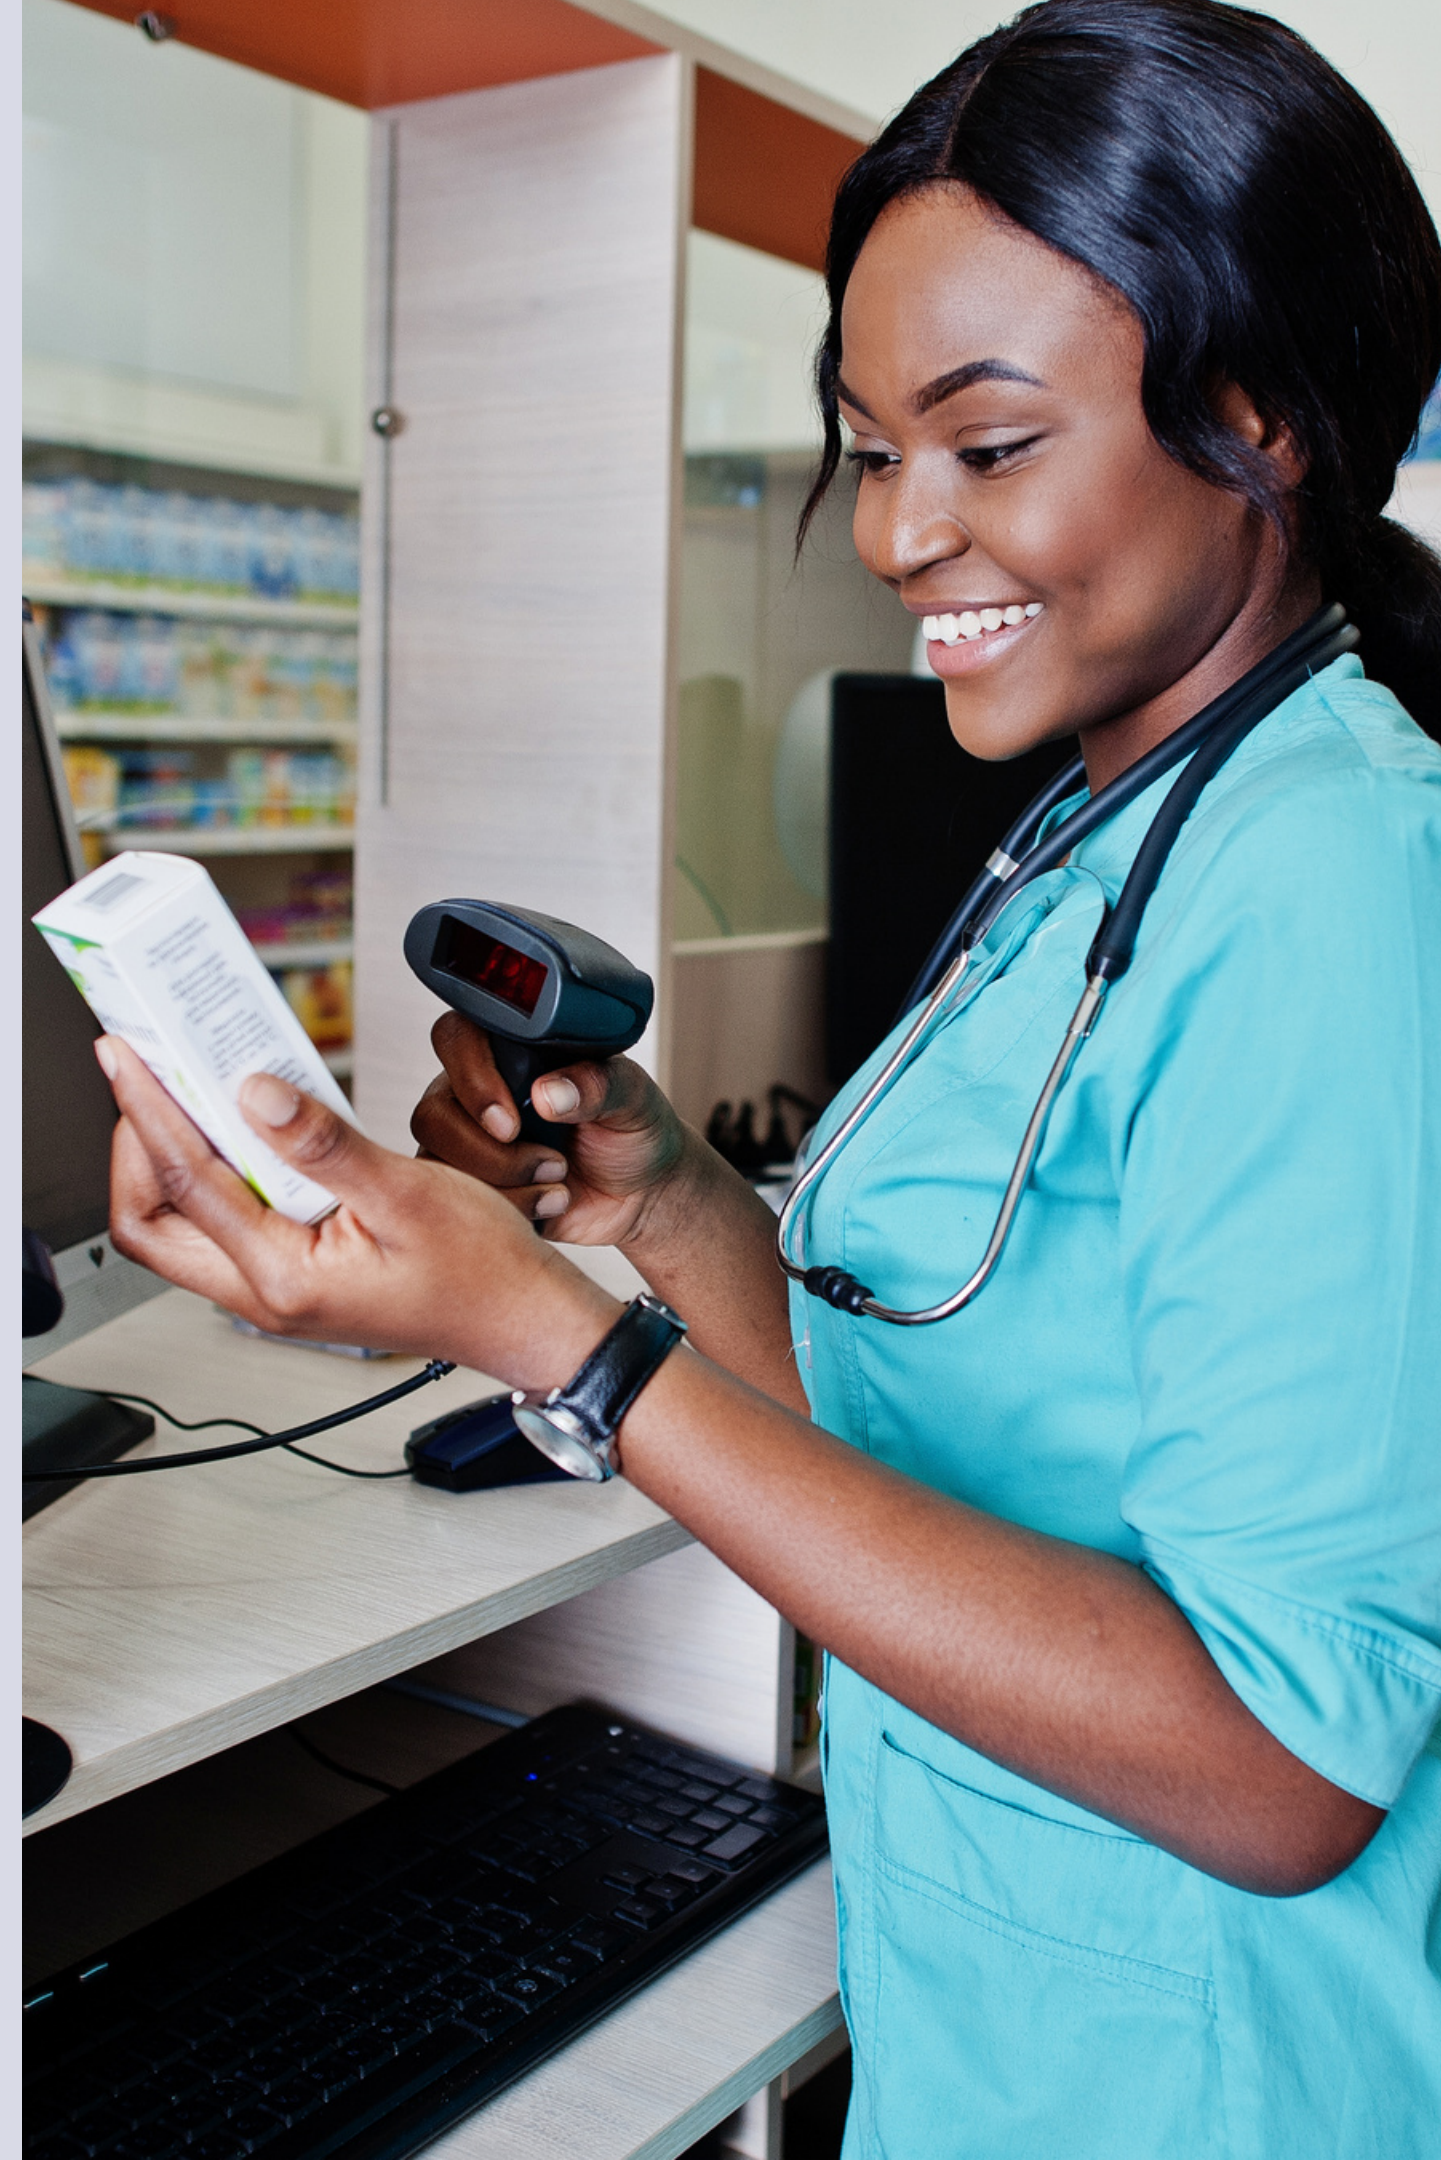

---

Nurses can see **prescription status information** as soon as you set it so there is no need for repeated calls from the ward to check on prescriptions.

Labelling and scanning technology means that you will always know where prescriptions are. If you use slots, you can accurately locate any prescription.

The system enables you to accurately **manage workloads** by pre-planning regular prescriptions you can control what the workload looks like for any given day.

The solution can be configured to fit your current business processes or amended to suit a best-practice approach.

# Simplicity

---

## **Search Medicine**

You're a quick search away from finding the right medicine in the system. By just typing in the name of the Controlled Drugs your team straight away finds the medicine they wish to order.

## **Simplified Medicine Workflow**

Rather than clunky, paper-heavy books, the system brings you a simplified flow to manage your Controlled Drugs.

## **Safety checks for CD order**

*Book. Approve. Schedule.*

For CD orders in particular the right safety procedures are of high importance.

The CD Ordering system prompts you to authorise booked-in prescriptions. Without authorisation from for example a dedicated registered nurse CD orders cannot go through.

This safety check ensures you comply with the regulation as set out by the Care Quality Commission (CQC), and allows you to prove you have done so.

Once approved you can schedule your booked in prescription in full knowledge you've done the necessary checks.

# Verification check

---

The person who places an order can enter their Royal College number. This is used to verify the person placing the order is registered.

This information can be permanently stored on the system for the duration of the registration as well as the verification date. This helps future orders to be processed smoothly.

# Compliance with dm+d

---

The Dictionary of medicines and devices (dm+d) is the recognised NHS standard for communicating medicines information.

Our CD Ordering platform adheres to the standards set out in the dm+d.

As NHS organisations make use of this dictionary on different systems, the CD Ordering system will be intuitive for your staff.

**Who are we?**

Promatica Digital Solutions

# **ABOUT PROMATICA DIGITAL**

Promatica Digital was set up as digital solutions for the NHS grew in importance.

With over 25 years of experience working across the NHS, Promatica Digital has a unique perspective. With this insight we create solutions that actually make a difference and design software that is easy to use for people working in health and social care.

# Our other digital solutions

---

## **Temp Tracker**

Monitors medical fridge temperature, helping you comply to CQC requirements

## **Quality Portal**

Quality Portal is a patient safety reporting tool allowing you to manage and improve quality in your healthcare organisation

## **Document Library**

Digital Library provides a full document management and training solution enabling staff to access all the documents/operational policies

## **Contract Tracker**

A key tool to support contract monitoring and performance and ascertain value for money

## **Social Rx**

A full social prescribing solution including software for health and care organisations
