

SilberTurbos Handheld Flasher Instructions

Thank you for the purchase of the Silber Turbos Handheld Flasher. Please follow these instructions to reflash your vehicle.

Step 1: Fully Charge Handheld Device, your device comes with a 110v adapter and charging cord.

Step 2: Turn the handheld device on.

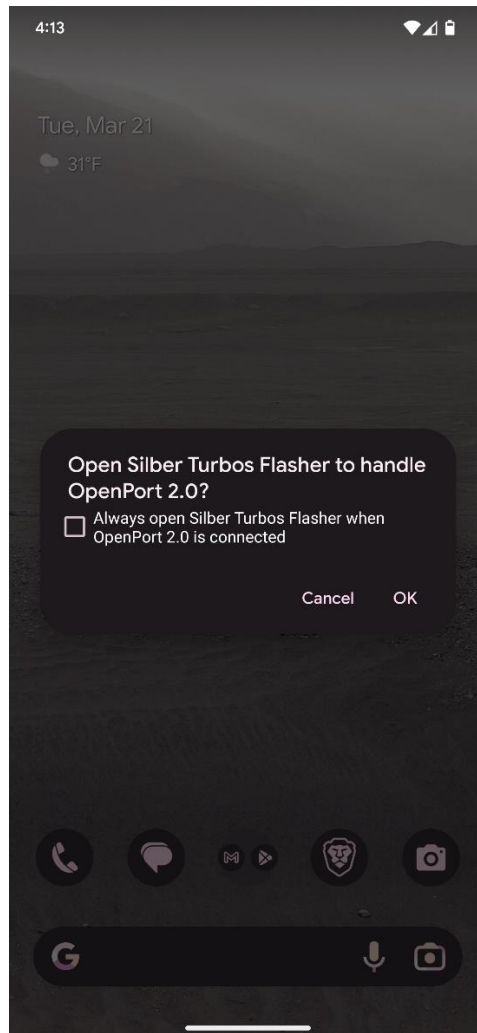

Step 3: Connect the handheld device to your WIFI. Go to settings, then select network and internet, then select WIFI, then select your local WIFI network. You may have to enter your WIFI password if you have a secure WIFI network.

Step 8: When you select the file you want to flash, you will get another pop up. **When you get this pop up you will now connect the reflash cable to your vehicle, and also connect the 12v battery. (Make sure you 12v battery is fully charged. Most flashes fail because of a low battery during flashing.)** The device will have a progress bar scroll across the screen during the flashing process.
