

Skidoo Turbo Oil Supply Line

There is an oil line to each rave valve.

Remove the hose from the mag side rave valve

Disconnect the line at the plastic check valve, you will leave the short line and check valve intact connected to the one on the engine.

The mag side oil line will connect to the turbocharger.

Remove the line from the PTO side rave valve at the white check valve

Connect our supplied tee to this line and use a clamp on it

On each end of the tee there are hoses coming off it

Connect one to each of the plastic check valves on the rave valves

Be sure to fill the lines with your two stroke oil before connecting them a little syringe works great for this

You also need to put some oil into the turbo with syringe prior to hooking line up to turbocharger (15cc of two stroke oil)

Pictures coming soon...
