

SPARK & BELL

Instruction Sheet

Thank you for purchasing our lights. All of our lights are designed and hand-made in the UK and are made to meet the requirements of UK and EU standards. When you're ready to install your light, make sure you hand the instructions to a qualified electrician. With that in mind please:

- Shut off the power before installing
- Do NOT exceed the wattage listed on the label
- These lights are for INDOOR USE ONLY
- Always make sure any surface close to the bulb is at least 30mm away to prevent fire hazard
- Ensure fixings are appropriate for the mounting surface
- Screws provided may not be suitable

Parts Included:

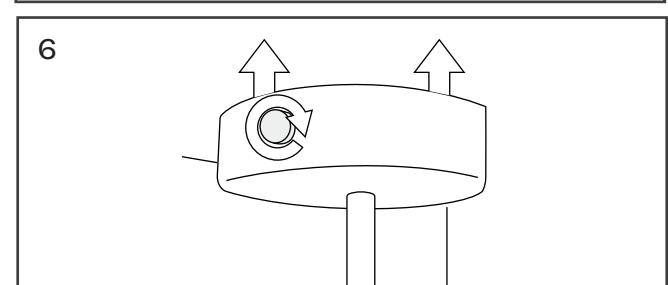

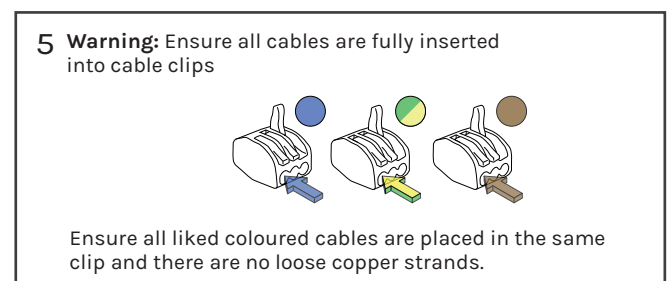

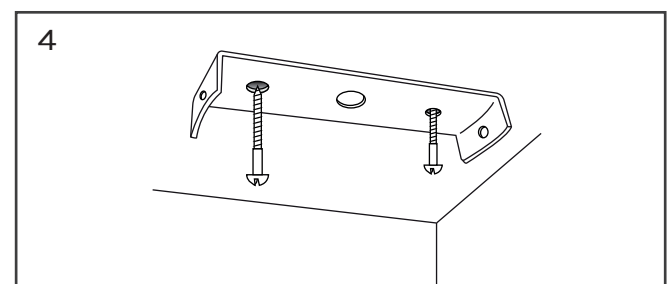

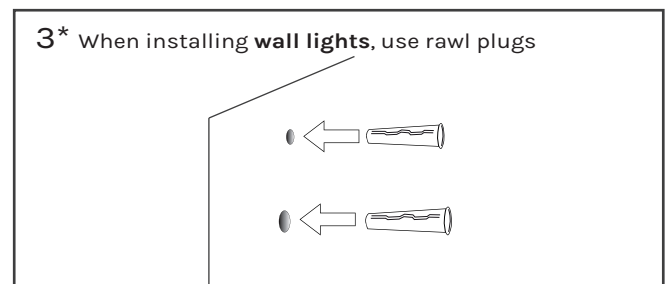

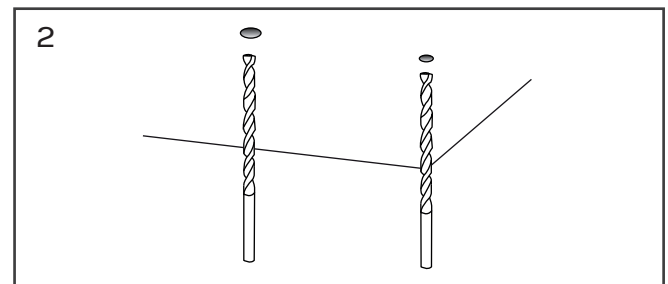

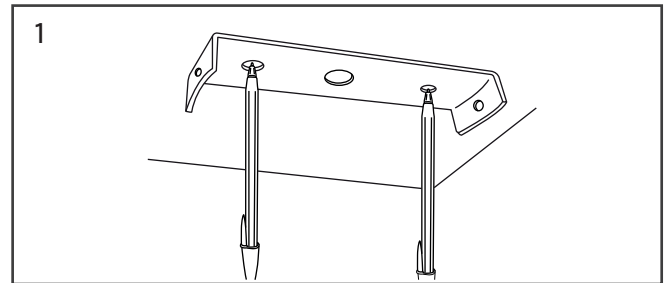

You will need:

- Electric Drill
- Screwdriver

Adjusting The Fabric Cable:

1

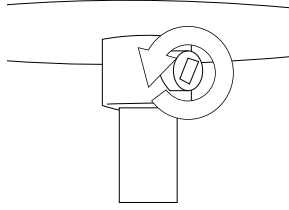

WARNING: Terminals must be relieved from strain or twisting.

After adjusting, ensure all cables are fully secure in the terminals.

2

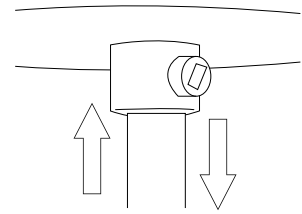

Release grub screw with 4mm flat head screwdriver.

ENSURE light is properly supported before loosening the grub screw

3

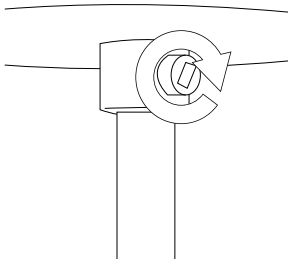

Adjust fabric cable to desired length.

Ensure there is at least 80mm left behind the sconce.

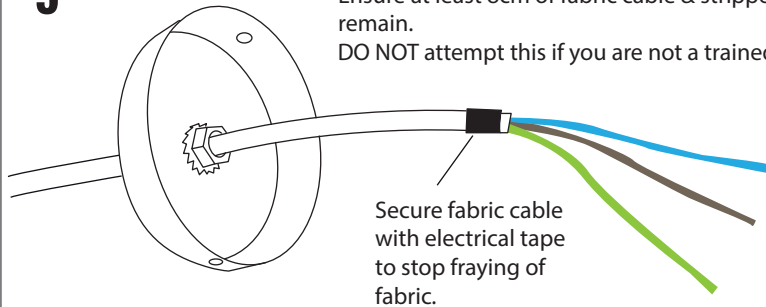

4

Re-tighten screw to same tightness as before.

5

Ask your electrician to carefully strip the excess fabric & PVC cable cover remaining on the inside of the sconce. Ensure at least 8cm of fabric cable & stripped cable remain. **DO NOT** attempt this if you are not a trained electrician.

Secure fabric cable with electrical tape to stop fraying of fabric.
