

SPARK & BELL

Universal lighting care Sheet

Cleaning instructions:

At Spark and Bell we take great pride in offering customers the ability to customize their lights. However, offering different materials for individual lights, complicates the issue of cleaning.

Raw brass:

Raw brass is a soft unfinished metal and as such will tarnish and patina over time. we recommend cleaning regularly with a soft clean cloth, if you wish to return your light to its original condition, we suggest a mild metal polish such as Brasso.

Powder coated:

Powder coating is a hard wearing painted finish which is baked on to increase durability. We recommend cleaning regularly with a soft clean cloth only. As with all painted finishes exposure to high temperatures and strong sunlight can lead to fading.

Specialist coatings:

Satin, Nickel, Old English and Bronze are all pre applied finishes that prevent tarnishing. This coating is easily damaged with chemicals and therefore metal cleaners are not recommended. To maintain the finish we suggest a clean regularly with a soft clean cloth.

Wood, Glass and Ceramics:

Shades made from wood, glass and bone china are fine to be wiped with a soft damp cloth. However, many of our shades are hand thrown and unglazed (not glossy) these can absorb liquid. For this reason we suggest, only using a soft clean cloth.

If you have any questions about the care of your lights dont hesitate to contact us
