

In our TINY Collagen product, we use Bovine Hydrolyzed Collagen and comes from grass-fed cattle. The raw material is produced without synthetic binders, unnecessary additives, fillers, and additives as well as artificial colors and preservatives. The collagen powder manufactured in Germany is produced to the highest quality standards and is free from genetic engineering, gluten, lactose, soy, yeast, and allergens; in other words, it is a pure collagen bovine protein. The active ingredient collagen hydrolyzate type I was obtained by enzymatic cleavage.
