For Automated and Manual Staining of Blood Smears
For Automated and Manual Staining of Blood Smears •
Classic, Traditional Textbook Coloration •

The unique combination of these products has been developed for the use in automated and manual staining of blood smears for hematological studies. These special 5-step processes (featured on the Camco® Wright Stain label) provides stained blood smears of classic tradition with textbook colors utilizing our Camco® Wright Stain, Camco® Fixative and Camco® Wright Stain Buffer pH 7.15 or pH 6.8

400, CAMCO® Wright Stain is highly refined, modified and purified alcoholic Wright Stain solution. This specially formulated stain makes analysis of the smear much easier.

401, CAMCO® Fixative is methanol-based fixative to set the blood smears as the first step in the 5-step processes. Also may be used for any fixing purposes where Methanol fixing is needed.

402, CAMCO® Wright Stain Buffer pH 7.15. Each 4.4 g vial is enough to prepare 1 gallon of pH 7.15 buffer solution for use in the 5-step staining process. The buffer is helpful with the development of the correct, clear nuclear color scheme.

412, CAMCO® Wright Stain Buffer pH 6.8 Each 4.4 g vial is enough to prepare 1 gallon of pH 6.8 buffer solution for use in the 5-step staining process. The buffer is helpful with the development of the correct, clear nuclear color scheme.
