

# 975 LOW PROFILE LIGHTBAR

Available in 16" to 75" lengths

Lorem ipsum

TOMAR's 975™ Lightbar brings the performance and ruggedness of our 970 Scorpion™ and Black Widow™ Lightbars to a single-sided design. With the same extruded aluminum housing found in our full-sized Lightbars, 975 offers unprecedented strength in design. The individual modules can be specified in 3 and 6 LED single color or 12 LED dual-color and offer selectable options such as powerful forward-facing or tilt-down scene lights and optical STROBECOM II™ infrared strobe preemption emitters. With a rear mounting track running the length of the bar, 975 can be easily adapted to your build. Bring the power of performance of a full-sized lightbar in a compact design to your next build!
