

DUAL MODE

Dual-Mode, Dual-Color LED Warning and Scene Lighting adds safety for both responding and on-scene!

DUAL MODE

The ability of one single lamp to effectively perform the task of two

iLED

The iLED Series delivers unprecedented functionality with the ability to switch between warning mode and powerful white lights making this light extremely versatile for any application.

REVOLUTION

The Revolution Series provides award winning warning and illumination in two different dual mode options:

- Revolution Warning is a NFPA compliant and Triple-K compliant warning light, can be ordered dual mode to act as additional scene lighting.
- Revolution Multifunction (MFR) is a single light head with dual color capable warning light, and high intensity tilt down scene light.

SCORPION

The 970L Scorpion and 970B Black Widow: Dual-mode lightbars which can switch from NFPA Warning Mode to intense, bright white flood and spot lights to illuminate your scene.

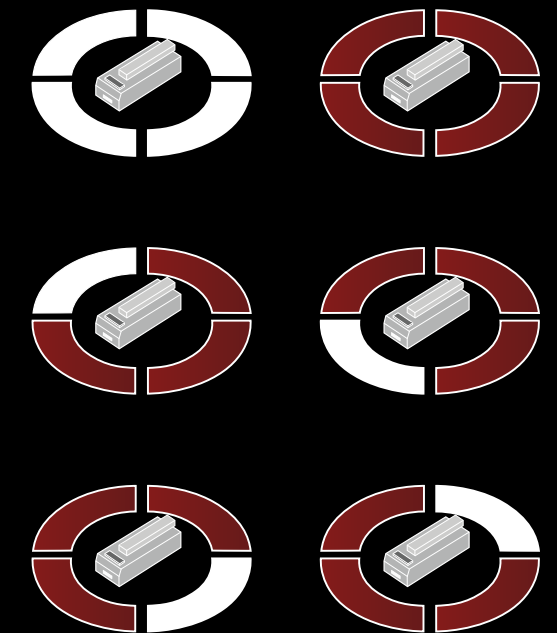

Effective Warning AND Intense Illumination from a single lamp.

TRX

With dual-color mode the TRX can switch between powerful white flood lights or amber light for fog, dust, snow, rain, or smoke making the TRX series lightbar adaptable to any condition.

Side Selectable Warning and Illumination

Side-selectable White-out Illumination helps reduce distraction on scene from flashing lights, while increasing visibility.

Dual-Mode, Dual-Color provides warning and illumination in one unit with a flip of a switch.
