

PRO-PC-6, 6-Station HD 12V Portable Recovery Battery Charger

Part #: 746X860

Model #: PRO-PC-6

NSN: 6130-01-670-6729

Description:

The 6-Station HD Portable Battery Recovery Charger is a 12V, 6A per channel charging unit that uses universal electrical input and can be used worldwide. This charger can be connected to any type or size of 12V lead-acid battery (VRLA, AGM, Gel or flooded cell) regardless of brand or capacity. Each of the six charge stations operate independently and in isolation from one another. This allows any combination of batteries to be recovered and recharged at the same time.

One switch operation and easy to understand LEDs simplify operation and minimize operator training. There is no risk of overheating or overcharging the battery.

This charger is a smaller version of the 12-Station HD 12V Portable Battery Charger which is based on the same proven technology as the larger roll around HD PC-12 Pallet Charger with some significant upgrades. The HD Portable Chargers are equipped with multiple cooling fans for better air flow, are much lighter and take up much less space.

Specifications:

Input Electrical	100-250V
Input Current	15 Amps Max
Output Electrical	6 Amps per Channel; 6 Channels
Enclosure Type	Sand steel enclosure
Enclosure Dimensions	5.25" x 15" x 16.75"
LEDs	Battery Disconnected, Bad Battery, Recovery Charge, Pulse Charge, Charge Complete
Leads	8' - 14 AWG
Termination	Battery clamps
Weight	22 lbs
