

PRO-PC-12, 12-Station HD 12V Portable Battery Recovery Charger

Part #: 746X871

Model #: PRO-PC-12

NSN: 6130-01-670-6428

Description:

This Portable Battery Recovery Charger is a 12V, 6A per channel, 12-Station charging unit that uses universal electrical input and can be used worldwide. This recovery charger can be connected to any type or size of 12V lead-acid battery (VRLA, AGM, Gel or flooded cell) regardless of brand or capacity. Each of the twelve charge stations operate independently and in isolation from one another. This allows any combination of batteries to be recovered and recharged at the same time.

One switch operation and easy to understand LEDs simplify operation and minimize operator training. There is no risk of overheating or overcharging the battery.

This recovery charger is based on the same proven technology as the larger roll around HD PC-12 Pallet Charger with some significant upgrades. This model is equipped with 3 cooling fans for batter air flow, is much lighter (47lbs vs 90lbs) and takes up much less space.

Specifications:

Input Electrical	100-250V
Input Current	15 Amps Max
Output Electrical	6 Amps per Channel; 12 Channels
Enclosure Type	Sand steel enclosure
Enclosure Dimensions	11.65" x 15" x 16.75"
LEDs	Battery Disconnected, Bad Battery, Recovery Charge, Pulse Charge, Charge Complete
Leads	8' - 14 AWG
Termination	Battery clamps
Weight	47 lbs
