

RESET A SYSTEM IN 30 SECONDS

The **Bartec USA QST200 Battery Management Reset Tool** gives technicians access to the necessary functions that were previously only available on complicated and expensive scan tools. The QST200 completes the battery relearn step in seconds. On average, the total time required by the technician to reset a system will be 30 seconds. The QST200 covers all makes and models with a simple make, model, year selection process. Functions include the ability to reset the battery systems settings in order to cater to new battery fitment, code clearing on vehicles and other features and component tests that are relevant to the diagnosis and maintenance of the battery management system.

CHARGES, CONDITIONS AND MAINTAINS VEHICLE BATTERIES

The **PulseTech 10-Watt Solar Pulse Solar Charger Maintainer**, No. SP-10, charges, maintains and desulfates all 12V lead-acid batteries including VRLA, AGM, gel and flooded cell without danger of overcharging or overheating. It's ideal for charging three to four 12V lead-acid batteries connected in parallel, helping to ensure that batteries remain in peak condition. The SP-10 incorporates PulseTech's patented Pulse Technology which removes sulfates from the battery plates and returns the battery to a like-new state capable of holding a full charge and extending battery life up to three times, the company says. It's protected with a clear polyurethane plastic coating that makes it virtually indestructible and impervious to weather, aging and damage from everyday knocks and bumps. Weatherproof and with multiple mounting options, the panel dimensions are 12.41" long by 9.85" wide by 0.2" high. When mounted on a vehicle or equipment, the SP-10 is an entirely automatic battery conditioning and charge/maintenance system. The SP-10 comes with a five-year limited warranty.
