

Old news: We already know by now that any of PulseTech's multi-station chargers can charge multiple different types of batteries simultaneously, right?

New news: We have a brand-new member of the PulseTech family; the Bench Top 6 station charger. Designed for the shops that want the capability and advanced technology of the Pallet or BenchTop 12 station chargers, but in a smaller package.

Common Features for all multi-station chargers, including the new Bench Top 6:

- One switch operation (on/off with easy to read LED indicators indicating battery status).
- Smart technology; Auto Diagnose, Recover, Charge and Maintain.
- Patented, High Frequency Pulse Technology removes sulfate crystals.
- Works on all 12V (24V for Dual 24) lead acid battery types; VRLA, AGM, flooded and gel.
- Universal power input; 100 to 250Vac operation anywhere in the world.
- Reverse polarity protected, ruggedized military casings, and Replaceable charging cards, cables and more (with NSNs) on the Pallet, Bench Top 12 & 6 station chargers.
- **All have independent charging channels operating in isolation from one another;**
 - > Simultaneously charge any combination of batteries (VRLA / AGM, Gel or flooded cell)
 - > Fully automated systems which diagnose the condition of each individual battery and automatically provides the appropriate charge for maximum battery

Pallet Charger
Part# 746X820
NSN 6130-01-532-7711

Bench Top 12 Station
Part# 746X871
NSN: Pending

NEW - Bench Top 6 Station
Part# 746X860
NSN: Pending

Dual 2 Station 24V Charger
Part# 746X840
NSN: 6130-01-609-9818

Example: BenchTop 12 station charger engaging 12 batteries simultaneously, while still mounted on M1 Tank.

Example: Pallet Charger engaging 12 batteries of various types simultaneously.

Are you getting some long ESDs on requisitions for BSES kits or Pallet Chargers? We want you to know this is NOT a PulseTech delay, and we have inventory to fill requisitions. If your unit falls into this category we suggest you contact the CECOM Item Manager directly for status updates. The more feedback CECOM gets from the field the better they will understand the urgency for units. Another option is to purchase directly via GSA-Advantage vs using the NSN and supply system.

BSES Kit breakdown: Kit NSN: 6130-01-541-9731

- 1ea ProHD Charger (NSN 6130-01-500-3401)
- 1ea Pallet Charger (NSN 6130-01-532-7711)
- 1ea Pro-12 Maintainer (NSN 6130-01-535-2718)
- 1ea 490PT+ Digital Analyzer (NSN 6130-01-510-9594)
- 10ea MBT-1 Mini Load tester (NSN 6130-01-463-8499)

Are you stationed someplace that gets a good amount of sunlight? If so, you may want to look at adding solar capability to your BMMP. The 2 examples below are the most widely used 24V systems. These systems both produce 6.3 Watts, have High Frequency Pulsation, are extremely rugged, and very easy to install.

The **24 V Pulse Solar Charger NSN 6130-01-487-0035** at left is hard wired on the platform and comes with a complete mounting kit.

The **24V Solar Pulse Charge Monitor System NSN 613-01-558-5371** at right plugs into the slave receptacle and is secured to the vehicle via a supplied Velcro strap.

Reminder: On-site BMMP training and technical assistance visits are available to ALL Military organizations. Don't start from scratch, we also have a complete example battery maintenance SOP our FSRs can send you! For questions about gear, specs, troubleshooting, or would like to discuss a training / assistance visit please contact your supporting FSR.
