

Ultherapy®

SEE THE BEAUTY OF SOUND™

Garrett and Frank Brady

Redefining FACIAL Rejuvenation

Ultherapy can help you achieve a fresher, more youthful look from your brow to your décolletage. Using ultrasound technology, which includes imaging similar to when you are pregnant, Ultherapy allows consultants to see the layers of skin tissue they are treating. This ensures the energy from the treatment is delivered where it will be most beneficial.

How does it work?

Ultherapy works by stimulating collagen production by delivering focused ultrasound energy to the layers of the skin typically addressed in cosmetic surgery. This energy initiates the body's own natural response to stimulate the growth of fresh, new collagen and strengthen weak collagen.

When will I see the results?

You may see some initial effects, such as improved resurfacing and tone of the skin, but the ultimate results will take place over a two-to-three month period. This is due to the regrowth of new collagen.

What does Ultherapy feel like?

As the ultrasound is delivered, you will feel tiny amounts of energy.

Where can I get the Ultherapy treatment?

We recommend you avail of the complimentary consultation with Dr. Garrett Brady, Medical Director of Lowell Medical. He is a Facial Aesthetic Surgeon with over 15 years clinical experience in Maxillofacial surgery, and more recently lead specialist in Ultherapy treatments in Ireland. At Lowell Medical, we make a commitment to a discreet and personal approach which is relaxed and informal. You will be treated by Ireland's leading facial surgeons.

BENEFITS OF ULTHERAPY

1. A single non-invasive treatment
2. No downtime
3. Natural results
4. No toxins or fillers
4. It's ultrasound
5. No sun restrictions

The new and improved Ultherapy procedure now treats closer to the skin surface. Ultherapy is the only non-invasive FDA-approved treatment to lift skin on the face, neck and décolletage.
