

Platinum Upright Fridge/Freezer Mounting Kit Installation Guide

Parts List

- 1 x Top Piece - which allows for the door to be left or right opening.
- 2 x Side Pieces
- 4 x Screws
- 4 x Washers
- 9 x Blind Rivets

What you'll need to complete the install:

- 1 x Drill
- 1 x Rivet Gun

Installation Guide:

Each piece included in the mounting kit contains pre-drilled holes. These pre-drilled holes are the **ONLY** place the mounting kit should be attached, failure to do so may void the warranty of the fridge.

To attach the mounting bracket to the cabinet, use the rivets supplied and a rivet gun. We also suggest that it is fitted within the first 50mm of the front of the cabinet.

Once attached, it adds an additional 25mm to the height and 50mm to the width (25mm each side) of the cabinet.

Please note: check that the screws supplied are the correct type for your set-up. The type and length will differ depending on where you are mounting the fridge.
