# sample Flying Monkey - 2.0 Heavy Hitter Disposable - Blueberry Cookies - 0000264

Sample ID SD221021-016 (53939)		Matrix Concentrate (Inhalable Cannabis Good)
Tested for White Label Leaf		
Sampled -	Received Oct 21, 2022	

Analyses executed CANX

Laboratory note: The estimated concentration of the unknown peak in the sample is 6.00% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or d9-THC. At this time there are no reference standards available for (+)d8-THC (+)d8-THC (+)d8-THC is a different compound from the main (-)d8-THC canabinal and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)d8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and d9-THC with the majority, if not all, of the concentration being (+)d8-THC. Total (+/-) D8 Concentration is estimated to be: 6111%

QA Testing

### sample Flying Monkey - 2.0 Heavy Hitter Disposable - Girl Scout Cookies - 0000257

Sample ID SD221021-010 (53933)		Matrix Concentrate (Inhalable Cannabis Good)	)
Tested for White Label Leaf			
Sampled -	Received Oct 21, 2022		Reported Oct 28, 2022

Analyses executed CANX

Laboratory note: The estimated concentration of the unknown peak in the sample is 4.10% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or d9-THC. At this time there are no reference standards available for (+)d8-THC, (+)d8-THC is a different compound from the main (-)d8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available to be 47.35%.

# sample Flying Monkey - 2.0 Heavy Hitter Disposable - Grape Ape - 0000255

Received Oct 21, 2022

# Sample ID SD221021-032 (53930) Matrix Concentrate (Inhalable Cannabis Good)

Tested for White Label Leaf Sampled -Analyses executed CANX

Reported Oct 26, 2022

LOD LOO Bosult Bosult

Reported Oct 26, 20.

Laboratory note: The estimated concentration of the unknown peak in the sample is 5.95% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or d9-THC. At this time there are no reference standards available for (+)d8-THC. (+)d8-THC is a different compound from the main (-)d8-THC cannabinoid and, therefore, these two compounds may have different efficacles. Using the most advanced instruments and techniques available in is estimated to be 592.8% (-)d8-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and d9-THC with the majority. If not all, of the concentration being (+)d8-THC. Total (+/-) D8 Concentration is estimated to be 59.2%

## sample Flying Monkey - 2.0 Heavy Hitter Disposable - Green Crack - 0000254

Sample ID SD221021-031 (53929)		Matrix Concentrate (Inhalable Cannabis Good)	
Tested for White Label Leaf			
Sampled -	Received Oct 21, 2022	Reported Oct 26, 2022	

Analyses executed CANX

Laboratory note: The estimated concentration of the unknown peak in the sample is 5.05% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or 09-THC. At this time there are no reference standards available for (+)d8-THC. (+)d8-THC is a different compound from the main (-)d8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available. The sample is 5.05% | Currently PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and 09-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and 09-THC with the majority, if not all, of the concentration being (+)d8-THC. Total (+/-) D8 concentration is estimated to be: 59.14%.

PharmLabs San Diego | 3421 Hancock St, Second Floor, San Diego, CA 92110 | 619.356.0898 | ISO/IEC 17025:2017 Certification L17-427-1 "This report shall not be reproduced except in full, without the written approval of the lab. This report is for informational purposes only and should not be used to diagnose, treat or prevent any disease. Results are only for samples and batches indicated. Results are reported on an "as received" basis, unless indicated otherwise. When a Pass/Fall status is reported, that status is intended to be in accordance with federal, state and local lows which are required for the customer to be in compliance. The measurement of uncertainty is not included in the Pass/Fall evolution unless explicition unless explicition, state or local lows and has been reported on the retrificate of analysis. Ressurement of uncertainty is available upon request.

### sample Flying Monkey - 2.0 Heavy Hitter Disposable - Watermelon Zkittles - 0000256

Sample ID SD221021-009 (5393)	I) Mo	itrix Concentrate (Inhalable Cannabis Good)
Tested for White Label Leaf		
Sampled -	Received Oct 21, 2022	Reported Oct 28, 2022
Anglusos executed CANX		

Laboratory note: The estimated concentration of the unknown peak in the sample is 4.14% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)84-THC or d9-THC. At this time there are no reference standards available for (+)28-THC, (+)48-THC is a different compound from the main (-)48-THC cannobinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)28-THC and 49-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)28-THC with the majority. If not all, of the concentration being (+)28-THC. Total d8-THC is problematic to be 522.25%.
