1st grade student with a seizure disorder. None of his print was legible in the classroom.

BEFORE was with a near point model and continuous verbal cues for every letter. In class, he did not place any letters on the line nor write left to right unless cued for every letter, as in this sample.

AFTER only 4 SMHP sessions.

R still needs a printed model, but NO additional assistance.

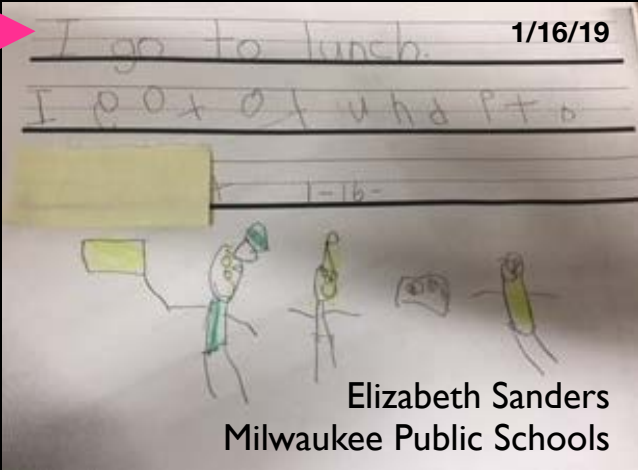

He also prints his name with 100% legibility including correct line placement.

Left to right directionality is pretty consistent now.

Margo had a stroke impacting her right side. The CVA was actually a few years old before she began working with Sarah, her new OT. Margo was willing to use her non-dominant left hand. The Acorn writing sample shows how she wrote her name before learning anything about the Size Matters Handwriting Program. The Butterfly page is after one session talking about letter size. The alphabet page is less than one month later. Sarah works at a Skilled Nursing Facility. Margo is 81.
