FMGT Installation Instructions

Installing this rubber floormat on your Vespa GT, GTS or GTV is a snap. Simply remove your Vespa's outer left and right floorboard strips (they pull right out), align the rubber posts on the bottom of the mat to the holes in your floorboard, and pop it in place.

You can also simply snip off the rubber posts on the mat and keep your floorboard strips intact, if you prefer.

Special thanks to Sabino for the photos!
