

From global humanitarian organizations to disaster relief, volunteer groups offer critical services to vulnerable people in hostile areas. In the past, perhaps one or two group leaders may have carried a satellite phone in case of an emergency, and these phones may have only been powered on when absolutely necessary. This posed significant challenges as it meant teams couldn't be tracked or communicated with unless devices were on, and not all members were accounted for during high-risk situations.

EVERYWHERE Communications, a leading provider of satellite communication solutions in remote and challenging environments, selected inReach satellite communicators¹ to integrate with their EVERYWHERE smartphone app and EVERYWHERE Hub. Combined, these create the EVERYWHERE Team Monitoring Platform.

The platform delivers a global incident command system, location monitoring and AES-256 message encryption that works off the Iridium® satellite network. This provides managers and dispatchers with consistent situational awareness of field-deployed personnel by using both real-time and historical track points.

Jake Bailey, vice president of product and customer success at EVERYWHERE Communications, said, "One of our customers deployed out on a first-wave Disaster Assistance Response Team (DART) for an earthquake response and used the EVERYWHERE app paired to their Garmin inReach all week. They were able to track all their vehicles in the field, even in the really remote villages, while maintaining communications, check-ins and progress and movement updates with their Global Security Operations Center (GSOC).

"They were so glad to have robust communications and accountability in place for fidelity on staff locations."

INDUSTRY: SATELLITE SERVICES

Location: Annapolis, Maryland

Established: 2018

Website: everywherecomms.com

THE NEED

Ability for devices to interface with the EVERYWHERE platform.

Team tracking and location monitoring.

Secure messaging.

SOS emergency response capability.

THE SOLUTION

[inReach satellite communicators](#) were chosen for their reliable communication and tracking capabilities and their ability to integrate with EVERYWHERE's intuitive web portal.

INREACH MINI 2

Lightweight and compact satellite communicator
