

# DIY BIO ETHANOL INSERT FOR ELECTRIC FIREPLACES

THE BEAUTY OF A REAL FLAME  
DESIGNED TO REPLACE  
YOUR ELECTRIC FIREPLACE.

DIY Bio Ethanol Insert is the perfect solution for replacing your old standard electric fireplace or a redundant gas fire opening. You can now easily create your dream fireplace with a mantelpiece of your choice.

It has been specially designed to fit our Mini Basket, holding a Mini Burner of a 750 ml capacity and including a special set with the Coal pack. The spacer brings the unit forward to compensate for less depth at the back (if needed).

At the same time, the double thickness and the heat shield at the back provide a durable heat protection for your wall as the unique venting system pushes the heat out quickly into the room.

## FEATURES:

- Dimensions: 47.5 W, 60 H, 4.5 cm minimum D
- Capacity of the burner: 750 ml
- Burning time per refill: 2.5–4 h
- Heat output: 2–2.5 kW (regulated)

Fully adjustable  
burner

**Brilliant natural flame alternative to an electric fire, which you can fit yourself and it's cost effective too!**

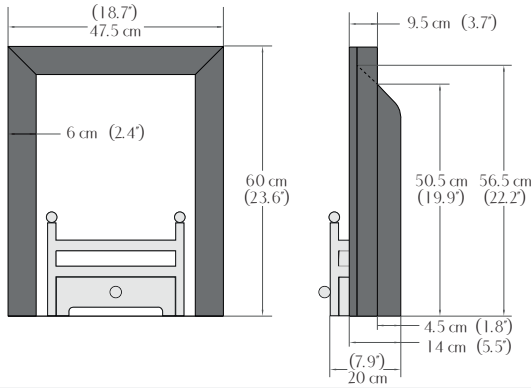

We are really delighted with our new purchase! We have a modern house with no chimney, so wood burners and gas fires were an expensive choice. We don't really need heat, but were after the cosy ambience that only natural flame offers.

Really easy to fit, quick delivery, and brilliant customer service. Both the product and the company highly recommended!

*Bettina*

BIO FIRES

## WHAT MAKES OUR FIRES BETTER than SIMILAR ALTERNATIVES?

- **Fragrance Diffuser**
- **Improved safety:** Extra thick stainless steel lid – for super smooth flame control, preventing heat buckling & jamming when shutting off
- Sleek and smart look
- **Laboratory tested**
- **Elegant Control Tool**
- **Our Small Burner is TÜV tested and approved**
