PRODUCTS:

GRAVITY Bioethanol Fire with Glass Panels

ZEN Bioethanol Fire in Mirrored Finish

H (Height): 400 mm / 15.74"

D (Depth): The product can protrude outside the fireplace opening, as long as the flame is within the hole. We recommend that the grate is placed as far back in the firebox as possible to create the most realistic illusion of a real fireplace.

W (Width): There is no requisite width for the fireplace, however the grate will look more aesthetically pleasing with at least a small gap either side of the product.
