HYALURONIC ACID

FROM CHICKEN COLLAGEN TYPE II

Premier Labs presents Biocell™ Chicken Sternum Collagen Type II, the next generation in the treatment of osteoarthritis, joint pain, rheumatoid arthritis and skin health & appearance.

What is collagen?

Collagen is a protein that makes up about 25% of the protein in the human body. There are 14 different types of collagen with Type II being the most predominant. It is important to the structural integrity of connective tissue located throughout most of the body, especially bone, cartilage, tendons, and ligaments.

Benefits of Chicken Collagen II:

BioCell Chicken Collagen is an abundant source of Collagen II that is the main structure building block of joint cartilage patented BioCell Chicken Collagen II is easy to absorb providing nourishment directly to the joints. Its absorption rate is around 70% to 90% and is naturally rich in proteoglycans such as Glucosamine Sulfate, Chrondroitin Sulfate, and Hyaluronic Acid. It is an impressive pain reliever and integral part of synovial fluid that lubricates the joint(s).

Other Benefits of Hyaluronic Acid:

Besides having anti-inflammatory properties and maintaining the effective lubricating qualities of synovial fluid, it is required to form other healthy proteoglycan structures, which are critical to the production of articular cartilage. It also helps to maintain the shape of the eye and assists phagocytes to travel through connective tissue during development and wound repair. It is an important element of skin tissue which declines with age, and when taken orally may support skin health and elasticity from the inside out. Can be made into a cream for topical use on the skin for improved softness and smoothness.

Rheumatoid Arthritis:

Double-blind studies have shown that the ingestion of Chicken Collagen II can reverse the symptoms of rheumatoid arthritis.

For best results:

- Start by taking (2) tablets of Neo Flex twice a day with meals, which contains 500mg of Chicken Collagen
- After two weeks, add (1) 500mg capsule of Chicken Collagen II to your (4) tablets daily of Neor Flex for another two weeks.
- Start your fifth week by taking (2) 500mg capsules of Chicken Collagen II with (4) tablets of Neo Flex until week seven.
- Week seven you will be taking (3) capsules of Cacken Collagen II with (4) tablets daily of Neo Flex.
- You will now be getting 2000 mg a day of Chicken Collagen Type II. Continue taking (3) capsules daily with (4) tablets of Neo Flex for a minimum of 8 to 12 weeks.
- After that you might be able to reduce the Chicken Collagen intake, depending on how one feels.
