

# ORALMAT

## Miracle in a bottle

### PRODUCT SPECIFICATIONS

Each dose contains: Secale cereale, extract equivalent dry herb young 2 m.

Known qualities: Anti-viral, anti-bacterial, anti-fungal, anti-inflammatory, and analgesic. The formula has also demonstrated powerful immune boosting and immunomodulating properties.

#### Manufacturer's recommendations:

Respiratory irritation and difficulties, sinus congestion and headache, cough, cold, sore throat, flu, mouth ulcers and wounds, chronic fatigue.

Suggested use: Adults apply 3 drops under the tongue 3 times each day after eating and drinking and especially before bedtime. Children apply 1 drop under the tongue before bed time.

\* Not to be given to children under 6 years.

#### New Rye Extract Formula From Australia – The World's Most "Asthmatic" Country

A true health revolution is taking place in Australia – the country with the world's highest incidence of asthma. One natural liquid preparation is finally liberating thousands from the vicious cycle of "life-stopping" respiratory symptoms and dependence on toxic steroid and anti-inflammatory drugs.

There are few health conditions as frightening as asthma. If you or someone close to you struggles with it – or respiratory difficulties of any kind – you are well aware of the symptoms. Living in fear of the next asthma attack \* having to "rest" for hours, even days, until your breathing difficulties have ceased \* struggling to breathe through the heavy weight of congestion. But what may be equally as disturbing are the risks involved in steroid-based asthma drugs and inhalers, which cause side effects ranging from stomach ulcers to cataracts to life-threatening heart problems. Millions of Americans are still trapped in the cycle of dependency on toxic inhalers for the management of their symptoms. And up until now, there wasn't much choice.

The nutritional breakthrough that is revolutionising asthma and allergy care in Australia is called Oralmat, a patented liquid extract of Secale cereale, more commonly known as rye grass.

This surprisingly potent extract upgrades

and modulates your immune response – increasing your resistance to allergens, irritants, viruses, bacteria and other toxic invaders that lead to respiratory difficulty, severe coughs, asthma and allergy attacks, and sinus congestion and headaches.

Because it's taken sublingually – just 3 drops of this pleasant-tasting liquid under the tongue, 2 or 3 times a day – Oralmat is rapidly absorbed into the mucous membranes of the mouth. The potent healing constituents of rye grass remain intact, bypassing the digestive acids, and relief is rapid.

In addition, the patented process of growing, extraction, stabilisation and purification increase the biological activity of the immune-boosting polysaccharides and hormone-like nutrients possessed by rye. And five years of clinical and laboratory testing use has revealed Oralmat to be completely gluten free and pollen free. In fact, not a single adverse response has been reported.

\*Rapid relief from laboured, strangled breathing

The exciting reports of Oralmat's success include:

- Relaxed, calm, natural breathing
- "Very impressive" results with allergies and hay fever
- Strangled breathing relieved quickly
- Coughs, colds, and flu eradicated
- Complete clearing of sinuses
- Sore throats soothed

The clinical evidence has been so overwhelmingly positive that even the conservative medical community can no longer ignore the healing potential of Oralmat.

Oralmat's remarkable success has spread rapidly throughout Europe, and several European pharmaceutical companies have expressed interest in marketing this potent formula as a prescription medication. For now, however, this potent extract can be obtained without prescription.

\*How does Oralmat work?

How Oralmat works is still somewhat mysterious, but chemical analysis has revealed six active ingredients: phytoestrogens (including the well documented hormone-regulator genistein), co-enzyme Q10, squalene, and the potent immunity booster beta 1.3 glucan. Though researchers are still searching for the particular nutrient or nutrient combination in rye responsible for its overall healing power, we know that the individual constituents of rye extract have been proven in clinical and laboratory studies to:

- Increase the immune system's ability to identify, weaken and destroy virus, fungal and bacterial infections.
- Increase bone marrow production – our white and red blood cells originate in bone marrow.
- Aid in the energy-production within the cell.
- Increase the body's resistance to fungal infections.
- Protect against the toxic effects of radiation therapy.
- Help stimulate macrophage activity to remove plaque build-up in arteries.
- Neutralise free radicals

A number of doctors have theorized that Oralmat is an "immunomodulator" which helps your body achieve homeostasis – a biochemical equilibrium. When your body is in homeostasis, it automatically monitors and regulates the production and use of nutrients, immune chemicals, and hormones, despite potentially threatening changes in the external environment – such as invasion by bacteria and allergens.

One health professional who'd been suffering with asthma, and had "tried everything," is finally able to safely, effectively relieve her symptoms with Oralmat – and she prescribes it to her patients. "It's having incredible results. We're all excited about this research."

**CASE HISTORY:** One 83-year-old wheelchair-bound woman with asthma and emphysema spent at least 2 hours a day on a nebulising machine. She also had a severe cough for years. Four days after starting to take Oralmat, her cough had disappeared and she was able to reduce her medication. Three days later, her chest had cleared so dramatically that she was able to walk several blocks unaided.

**CASE HISTORY:** Mrs. Jeanette Leach of Durban, South Africa had been suffering from chronic allergic asthma for the last three and a half years, during which period she had been taking "the strongest of drugs". Within two weeks of taking Oralmat she experienced a "favourable reaction" and three weeks later her chest had cleared, her coughing had stopped and she was sleeping through the night undisturbed.

Children also enjoy rapid relief: "[My daughter] hasn't had an attack since we've been using Oralmat. It's been great. Now the drops go everywhere we go, and as soon as the symptoms start, we just administer the

*"Having never prescribed an herbal medication during my 25 years as a doctor, the efficacy and broad spectrum of activity of Oralmat surprised me. The manufacturers appear to have achieved an important medical breakthrough capable of invoking both systemic and localised immense responses. Clinically, because of its "normalising" effects, the extract appears to be a powerful immunomodulator. The therapeutic potential of such a product is substantial, to say the least. It could replace many traditional medications . . ."*

– Dr Chris Reynolds

The damp, tropical climate of the Southern and Southeastern United States is a well known allergy/asthma area of the world. "The damp tropical climate allows for a plethora of allergens. Even some of my worst allergy patients responded very well to the drops."

In addition to providing relief from respiratory irritation and difficulty, Oralmat has also been observed to support a number of immunomodulating, anti-inflammatory actions including:

- Suppression of viral infections – including herpes zoster and simplex.
- Reversal of chronic fatigue, particularly in patients with Multiple Sclerosis, post-viremia, and other causes.
- Prevention of the deterioration in immune capability – as measured by activated lymphocyte studies – in the immunologically vulnerable.
- Relief of dental pain, and pain of oral thrush.
- Lowered insulin requirements for diabetics.
- Improvement in expectoration from coughs caused by upper respiratory tract infection or allergy.

# Oralmat™

A natural therapeutic phenomenon made in Australia and sold throughout the world.

## What is Oralmat?

Oralmat solution is a patented extract of the young rye plant, *secale cereale*, which is harvested at the peak of its nutrient-rich life, while the rye grass is still green. It is Australian, Therapeutic Goods Administration (TGA) listed.

## Biodynamically grown

The rye grass used in the manufacture of Oralmat is cultivated from biodynamically grown *secale cereale* grain. The biodynamic preparations were developed out of indications by Dr Rudolf Steiner in 1924. A cow horn manure preparation is used to enliven the soil, increasing the microflora and availability of nutrients and trace elements.

## Myriad of nutrients

The biodynamically grown *secale cereale* plant is rich in certain chemicals such as: beta 1, 3-glucan, squalene, co-enzyme Q10, phyto-oestrogens, genistein, daidzein, matairesinol and phyto-sterols and sterolins. It also contains trace amounts of certain minerals, vitamins, enzymes and amino and fatty acids.

Therapeutic actions of the individual constituents of *secale cereale* have been well researched and documented. The clinical effect of Oralmat however, depends on a delicate balance of these nutrients and other constituent parts that make up the *secale* plant which together act synergistically, wherein the whole is *greater* than the sum of its parts.

## Immune modulator

Oralmat Drops Solution has clinically and generally demonstrated its ability to invoke both localized and systemic immune responses. The synergistic phenomenon that exists between the constituents induce potent effects in the body, some of which translate to Oralmat's ability

to normalize the body's delicate biochemical functions, boost energy levels and improve quality of life.

There are innumerable testimonials from users and the medical profession alluding to immune modulating activities, which reflect in reports of phenomenal healing of inflammation, viruses, infectious diseases, allergies, wound healing and many other medical indications from the use of Oralmat products, namely Oralmat Drops Solution, Oralmat Wound Healing Spray and Acno Cream.

Controlled clinical trials conducted on Oralmat substantiate its therapeutic effects and also reveal some of the unseen phenomena.

### **Asthma relief**

In April 1999 the John Hunter Hospital in New South Wales, Australia completed a controlled clinical trial on the effectiveness of Oralmat Drops Solution in mild to moderate adult asthmatics.

During the study, patients taking Oralmat reported improved well-being and asthma symptoms, an improved ability to exercise and they experienced significantly improved lung function.

The physicians who conducted the clinical trial ended their report by saying that in view of their report, clinicians may choose to give qualified support to the use of Oralmat by patients who are seeking complementary asthma treatment.

### **Child asthmatic relief**

The results of the adult asthmatics trial and reports of children getting quick relief from the symptoms of asthma with the use of Oralmat Drops Solution prompted a trial on asthmatic children. Dr. Cohen, the Professor of Complementary Medicine at RMIT University Bundora Campus in Melbourne, Australia is carrying out a controlled clinical trial in asthmatic children. On completion of the trial and publication of the results in a prestigious, refereed medical journal, Professor Cohen has indicated his intention to give lectures worldwide on the benefits of Oralmat as a non-toxic, safe-to-use natural treatment for asthma, without side effects.

## **Inhibits growth of breast cancer cells by 89 percent**

An evaluation of an extract of rye grass, *secale cereale* (Oralmat™) for anti-neoplastic (anti-tumor) activity in vitro using 5 cancer cell lines has recently been conducted. The evaluation was carried out by the Department of Pharmacy, Faculty of Health Sciences, University of the Witwatersrand, South Africa.

Professor Moodley and Ntyiso Shengwenyana who carried out the evaluation reported that the rye extract caused a concentration-related inhibition of cell proliferation in all the cancer cell lines. Calculated in percentages, the level of inhibition reached for each cancer cell line is shown below:

1. Liver Carcinoma – 89%
2. Chronic Myelogenous Leukemia – 78%
3. Renal Cancer – 52%
4. Breast Cancer – 89%
5. Liver Cancer – 55%

This inhibition, they said, was equal to or greater than that produced by commonly used cytotoxic drugs. Furthermore, they added, the observation also suggests that the agent (*secale cereale*) is not simply cytotoxic to the cancer cell lines.

Their evaluations support what many other independent studies have shown: that phyto-oestrogens, such as lignans and isoflavones found in the *secale* plant, block the action on tumor growth factors, reducing the growth and spread of different types of cancers and angiogenesis.

The *secale* plant also contains phyto-sterols and sterolins. These plant fats have been shown to modulate the functions of the immune system T-cells by enhancing their cellular division and secretion of important soluble factors called lymphokine-activated killer cells. This revelation is supported in the following chapter.

## **Increases white blood T-cell count in HIV patients**

In the 2001, Vol. 16 edition of the Journal of Orthomolecular Medicine is an article by Dr. Daniel Rubin and Dr. Stephen Levine on Oralmat as a primary immune activator. Titled Oralmat and HIV disease, they report five cases which clinically illustrate the therapeutic effect of Oralmat

being useful in increasing sedation and relaxation. And furthermore they said, the results indicate a specific kinetic profile for secale cereale.

## **Wound healing enhancement**

Wounds, such as burns, abrasions and varicose ulcers, undergoing healing tend to develop extensive and chronic inflammation, extensive granulation tissue and contraction, thereby slowing the healing process.

Acno cream has proven to be an effective normalizing and anti-inflammatory agent replacing many traditional non-steroidal anti-inflammatory drugs (NSAIDS) treatments. Chronic and elevated conditions tend towards normal as Acno cream works to speed up the healing process by enhancing migration of epithelial cells bridging the gap in the wound.

## **Pain relief**

Acno cream has shown remarkable topical analgesic and skin softening effects.

## **Pre-menstrual syndrome (PMS) and menopause relief**

Numerous chemists and practitioners throughout Australia are prescribing Oralmat Drops Solution to women seeking relief from PMS and menopause symptoms. The majority of users not only get the relief they want, they also report experiencing relief four times faster than from the use of any other product, and without side effects.

## **Estrogen-replacement therapy**

In the July, 1998 edition of the Journal of Clinical Endocrinology & Metabolism is an article on phyto-estrogens as adaptogens.

The article refers to phyto-estrogens containing isoflavones, which are estrogen-like constituents that act as adaptogens, and explains how an adaptogen works: If you have an excessive amount of estrogen, these substances help block the estrogen from entering estrogen receptor sites. And if there is not enough estrogen, they fill the gap. That is what is meant by adaptogenic; they (isoflavones) have been shown to have both estrogenic and anti-estrogenic properties.

Drops Solution on people with HIV disease. In all five cases the T-cell count rose and viral load dropped after administration of Oralmat.

The article brings to the attention of the reader the multi-tiered functionality that Oralmat has because, it not only has positive effects on the immune systems via augmentation of the natural defenses which most likely includes mobilization of the latent CD4+ Leukocyte population, it also interacts at the neurohormonal level by improving quality of life.

The physicians said that improvement of the immuno-logical status of a person with HIV disease is a landmark event in their individual health, as well as the health of all people. And based on the five cases presented in the Journal along with their continued clinical experience similar to the reports, they believe that Oralmat Drops Solution should be recommended for all people, and any stage of HIV disease.

### **Activates the central nervous system**

The director of Neuropsychology Laboratory at Swinburne University in Victoria, Australia recently conducted a project examining the effects of Oralmat Drops Solution on the human electroencephalogram (EEG).

The EEG profile of 25 participants was examined. The purpose of the research was to examine the power of the delta and theta, alpha and beta frequency bands of the human EEG after administration of Oralmat Drops Solution. The EEG profile has historically been used in psychopharmacology to identify the action of a new drug/substance on the human brain.

The results indicate the administration of secale cereale (Oralmat™) significantly increased delta activity and reduced beta activity, particularly at frontal brain electrode sites. Frontal areas of the brain have been implicated in human executive functioning as well as in inhibitory processes. These functions are thought to govern various emotional and behavioral processes collectively underlying subjective states, mood, personality and the experience of emotions. This may help explain the behavioral and/or emotional effects reported by consumers of the secale cereale.

There is no doubt, the investigators said, that Oralmat Drops Solution is active in the central nervous system. Results signify Oralmat drops

The findings of this and other studies on specific plant compounds give insight into the therapeutic phenomenon that Oralmat Drops Solution possesses. Phyto-estrogens, such as those found in the secale plant, can be considered as a safe alternative to estrogen-replacement therapy, and helpful also for those with too much estrogen. Oralmat Drops Solution offers symptomatic relief, and without side effects.

### **Estrogenization—environmental pseudo-estrogen prevention**

Phyto-estrogens, such as those found in the secale plant, work to restore the body's delicate hormone balance by blocking the effects of excessive estrogen – whether from synthetic or natural sources. Oralmat Drops Solution is an effective preventative and treatment for the hormone driven cancers due to environmental pollutants called pseudo-estrogens, or false estrogens.

### **How does Oralmat work?**

The ~~controlled~~ conditions of growing the secale cereale plant and patented method of extraction preserves the integrity of the natural biochemical immune complement of phyto-nutrients. The activated ingredients in Oralmat work to restore the integrity of the body's cells. On a metabolic level, the body treats secale cereale chemicals as substances originating from within the body and, through digestion, utilizes them to produce all sorts of substances for the body's ongoing needs. The body uses its own chemical processes, through its adrenal glands and endocrine reticulum, to convert the precursors found in secale cereale to its well-needed hormones, glyco-proteins and other biological compounds.

### **A dietary supplement for well-being**

Oralmat Drops Solution works to normalize the immune system, giving rise to body homeostasis. This benefits users by not only getting relief from specific ailments such as asthma but also by enhancing their overall health and thereby reducing the risk of contracting other ailments and diseases.

Oralmat Drops Solution provides health-conscious consumers with a nutrient-rich dietary supplement and its long-term use is recommended to help maintain general health and well-being.
