

THE ENZYME CATALAZE

How beautiful is that! This enzyme can convert 600 thousand reactants to products in one second. How can you be lazy when your doing that much work. Enzymes enable us to make 2 million red blood cells in one minute! We need ENZYMES!

Precious Enzymes are the most effective, systemic enzyme formulation available today. It is manufactured by Specialty Enzymes & Biochemical's. Dr Vic Rathi (PhD Entomologist, PhD Pharmacologist) has taken the founders (DR Beard, Dr Wolf and Dr Ransberger) of systemic enzyme therapy to the next level. This is state of the art, backed by clinical trials. Call us for details.

The primary functions of Precious Enzymes:

Fight inflammation

Digest fibrosis (scar tissue)

Modulate the immune system

Cleanse the blood & remove blood clots

Fight Viruses and Bacteria

Reduce pain

Lower cholesterol & Blood pressure

Improve digestion

Increase energy

Accelerate wound healing.

Precious Enzymes are: 100% vegetarian; NO toxic level ever recorded; Safe for pregnant women and breast feeding mothers; no artificial colours, yeast or gluten. Lactose free and no harmful fillers. Even a baby could take them and yet they are so powerful they can destroy Cancer cells!

The following is a list of conditions that will be helped by taking Systemic Enzymes:

Anemia, anxiety, Autoimmune diseases, Backache, Breast lumps, Cancer, Cardiovascular disease, Colitis, Crohn disease, Colds, Cystitis, Canker sore, Chronic fatigue, Constipation, Diarrhoea, Diverticulosis, Eczema, Fatigue, Fibro myalgia, Food allergies, Gout, Headache, Hypertension, Hypoglycaemia, Heartburn, Hepatitis, Hiatal hernia, Herpes zoster, Inflammation, Kidney stones, Lactose intolerance, Liver problems, Mucous congestion, Multiple sclerosis, Obesity, Peptic ulcer, Polymyalgia, Premenstrual syndrome, Psoriasis, Sinusitis, Thrombosis. To name but a few.

How do they work

Anti-Aging. Because our enzyme production declines after age 27, supplementation is necessary.

Pain relief by breaking down inflammatory mediators and exogenous proteins.

Anti-Viral action by digesting protein coating of the virus and giving the immune system ammunition.

Energy is increased because enzymes increase the function of all our organs and muscles by the cascade effect which activates and brings about the production of some 2,700 other enzymes. Remember, nothing happens in the body without enzymes.

Fibrosis & Scar tissue is removed by being digested.

Sclerotic plaque (Arthrosclerosis) is digested by the proteolytic enzymes and cholesterol/fat is metabolised by lipases.

Inflammation is reduced by breaking down cyclical prostaglandins, digestion of protein markers on bugs which leads to their death, PGD2 synthesis

Blood pressure is reduced by dissolving the plaque, digesting scar tissue in the glomerulus, and removing metabolic waste from the blood.

Allergy reactions are alleviated by improved digestion as these enzymes work in the digestive system on their way out of the body. Foreign proteins causing the immune response are broken down and immune complexes are regulated.

Cancer cells are destroyed as are its defence mechanisms by the destruction; 1. of the tumours protective coating, 2. of the antibody antigen complexes, 3. by activation of the immune cells and finally 4. by improved overall health.

Why enzymes? Well, don't you want to look and feel younger, Don't you want more energy and vitality?

What ailments do enzymes help with? It would be easier to list what ailments they don't help with.

Who needs Enzyme Supplements? YOU!

The effects of poor diet, stress, pollution and a whole list of other factors demand that we replenish the enzymes our body requires us to have. But most importantly our enzyme production starts declining after age 27. By age 33 a professional footy player goes to the coach and says "I feel I have to give up professional football, I'm just not recovering enough from the last game. My injuries are taking their toll. They linger from game to game". By age 60 we have half the enzymes of a 20 year old. We start to allocate enzymes to the more important areas, primarily the organs. Which means the first place we notice enzyme deficiency is in the muscle, bones, cartilage and connective tissue. That amounts to aches, pains and stiffness. This keeps getting worse as we get older. We get weaker as scar tissue builds up. Our energy declines. If you give these enzymes a go, you will begin to reverse the above slow, degenerative, insidious onset of the dreaded old age. What have you got to lose? From my experience and many others, these enzymes are fantastic. Here's what I experienced. At age 25 I got married and went to Fiji for our honeymoon. I saw the young Fijians climb the coconut trees like monkeys. That's walking up the trunk with the soles of the feet against the tree. This takes great strength. I tried it and only got 2 meters up and had to wrap arms and legs around the trunk. I then slid down taking all the skin off my arms and legs. I was embarrassed. Back then I was playing sport, doing gym and running (I thought I was fit). Well about 6 months ago I was walking the dog on the oval. I had been taking the enzymes for about 3 months. I was feeling pretty frisky and decided to try and walk up the tall goal post like a monkey. I did it! Around the oval to the other goal post and I did it again. My wife was amazed. I haven't played sport, gone to the gym, or ran for 15 years! Couple this with driving a desk since leaving uni and WOW!

The strength I feel is different to what I have felt in years. I can prove this if you really want, but all you have to do is try them for yourself, you won't be disappointed, I guaranty it. In all my years this is the most amazing thing I have experienced. Just about every other supplement I have tried has done very little if anything. The magic trio is Evolution, Cell

Food, and Precious Enzymes. 95% of all problems would be eliminated by taking these. Guaranteed to make a difference!

What's in this stuff?

Peptizyme®SP: Absorbs released amino acids. Selectively locates the desired amino acids. Repairs muscles. Boost energy levels. Useful for body builders, to have leaner body mass, and/or protein utilization. Clinical studies show that Peptizyme SP induces fibrinolytic, anti-inflammatory and anti-oedema properties. Profound reduction of pain. An alternative for NSAIDs. Digest fat and reduce deposits of adipose and cholesterol.

Serratia peptidase (Serrapeptase): It is more powerful and has a broader pH range than pancreatic enzymes like Trypsin and Chymotrypsin. Pain reliever substitute for (Aspirin or Tylenol). Activates plasmin "the bodies naturally released fibrinolytic enzyme". Thins mucus secreted by the mucus membrane "beneficial to sinusitis sufferers". Emulsify deposits of cholesterol, calcium and fibrin resulting in heart disease. Dissolve the Isoprin bond (protein Shell) on viruses rendering the virus useless. Serratia peptidase is particularly beneficial in fibrocystic breast disease as well as upper respiratory tract conditions like sinusitis, bronchitis, asthma, and chronic obstructive pulmonary disease due to its ability to improve the structure and function of the mucus lining. Suppression of oedema, activation of fibrinolysis, reduction of immune complexes (antibody-antigen conglomerates), and proteolytic modification of cell-surface adhesion molecules which guide inflammatory cells to their targets. (Such adhesion molecules are known to play an important role in the development of arthritis and other autoimmune diseases.) It's also thought that the analgesic effect of Serratia peptidase is due to its cleavage of bradykinin, a messenger molecule involved in pain signalling.

Protease: Protease breaks down proteins thus allergies, leaky gut syndrome, toxic gut, and even some skin diseases like psoriasis are helped. Keep the intestine free of yeast (Candida), bacteria, protozoa and other parasites.

Bromelain: Reduces arthritic pain. Anti-coagulant & blood thinner. Activate immune response. Anti-inflammatory for rheumatism. Helps dermatological conditions. Beneficial for sepsis, autoimmune disorders, and protein utilization deficiencies.

Papain: Aids digestion, reduces flatulence gas/bloating, diarrhoea, and cramps. Helps keep skin healthy and soft. Anti-inflammatory properties known to reduce pain/stiffness of arthritis. Speeds wound healing.

Amylase: Digest carbohydrates

Lactase: Digests lactose. Lactose intolerant causes symptoms including cramps, gas, and diarrhoea.

Lipase: Break down dietary fats into an absorbable form and removing fats from storage. Lessens the load on the gallbladder, liver and the pancreas. Protein absorption from fatty foods is improved and remove fats from storage.

Rutin: Strengthen capillaries and connective tissue. Reduces inflammation. Anti-histamine and antiviral properties. Effective at protecting blood vessels. Increases wound healing.

Amla: Rich source of vitamin C, a powerful anti-oxidant. Beneficial for stomach ailments, anaemia, gynaecological problems and nosebleeds. Reduces fever. Effective as a Nerve, brain and hair tonic. Helps balance hyperacidity and balance PH levels.

Recommended dosage: Take at least 45min before food or 1hr after. The minimum dose is 1 capsules, 3 times a day. Increase this until you feel a difference. Be prepared for things to get worse before getting better. You may notice changes in as little as 3 days or it may take 3 weeks.

Warning: the blood cleaning properties of these enzymes means you will have to reduce your blood thinning medication as your blood improves. Check your blood thickness as you go. Otherwise these enzymes are safe, I have taken 80/day and know someone taking 100/day.

Interaction with other supplements: There are no known negative interactions with other supplements. Vitamins are co-enzymes and minerals are co-factors to enzymes. Enzymes can't work without vitamins and minerals. Vitamins and minerals cant work without enzymes.

How Precious Enzymes are made: The fruit enzymes along with the Amla and Rutin are from fruit grown in organic plantations. The Protease and Serrapeptase are each lab grown in a protein (fungus) medium. The enzymes are extracted using safe techniques to assure only the enzymes are in the product. Purity is assured.

Storage: Exposure to heat over 60°C not recommended. Store in a cool, dry place, with the lid on.

Enterically coated: a medicinal preparation allowing the enzymes to pass through the stomach unaltered and not destroyed by the intestines.
