

GROWLERWERKS APPROVED GAS CHARGERS

The uKeg is a pressurized container that keeps the beverage within fresh and pressurized, dispensing it through an integrated tap faucet. The gas source for the uKeg is provided by a device referred to as a “Cartridge”. These cartridges, depending on the gas needed, are also known as chargers, soda chargers, nitro chargers, or simply gas cartridges.

GrowlerWerks approves the use of GrowlerWerks brand cartridges which are tested to be of the highest quality and the uKeg is designed to work with the specific size of these cartridges. These can be purchased directly from the GrowlerWerks website or from other approved retailers. If the GrowlerWerks brand is not available, several other cartridge brands are known to be compatible with the uKeg, including Whip-It and Best Whip brands. GrowlerWerks does not guarantee that these brands will work with the uKeg as the specifications of the cartridges for those brands may change over time and any damage caused by a non-GrowlerWerks brand will void the warranty.

GrowlerWerks will extend the warranty to cover use with a non-GrowlerWerks brand of gas cartridge provided that the cartridge meets the following specifications:

1. Contains 8 or 16 grams of gas, depending on cartridge size
2. Designated “Food Grade”
3. Uses an unthreaded connection port
4. Has a protective coating for use in damp environments
5. Is compliant with the Size Reference provided below

SIZE REFERENCE (drawings are 1 to 1 scale):
