

ASSEMBLY INSTRUCTIONS

Follow the steps below to assemble your Inkegnito. You are one step closer to a glass of something great.

STEP 1

If the base is not pre-installed, attach the base to the bottom of the cabinet using the included screws.

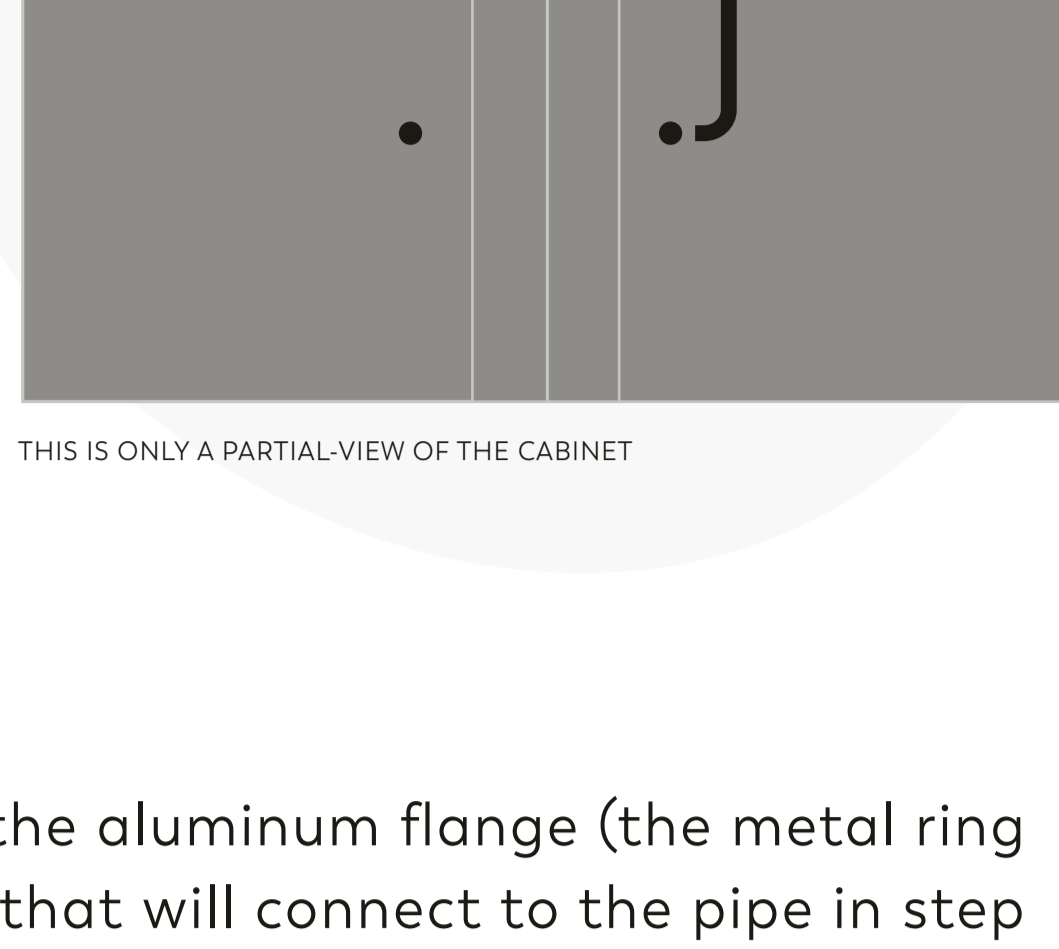

INCLUDED: 10 screws total, 2" long

VIEW FROM THE BOTTOM OF THE CABINET

STEP 2

Install the cabinet pulls into the pre-drilled holes using the included screws

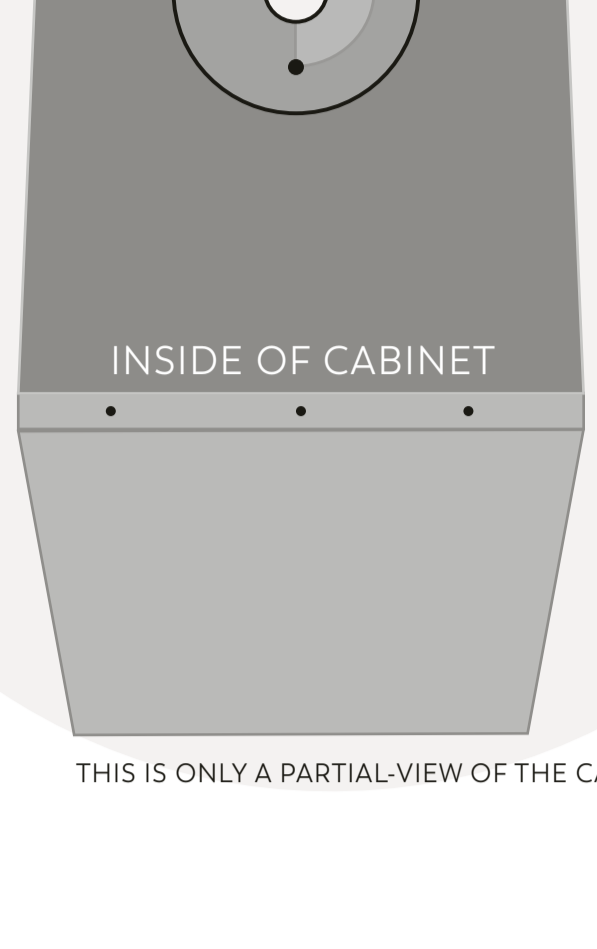

THIS IS ONLY A PARTIAL-VIEW OF THE CABINET

STEP 3

Attach the aluminum flange (the metal ring of steel that will connect to the pipe in step 4) to the underside of cabinet. The top of the flange will fit snugly in the hole of the cabinet. Secure the flange in place using the four wood screws.

TIP: Make sure the half-moon cutout is facing up and to the right

INSIDE OF CABINET

THIS IS ONLY A PARTIAL-VIEW OF THE CABINET

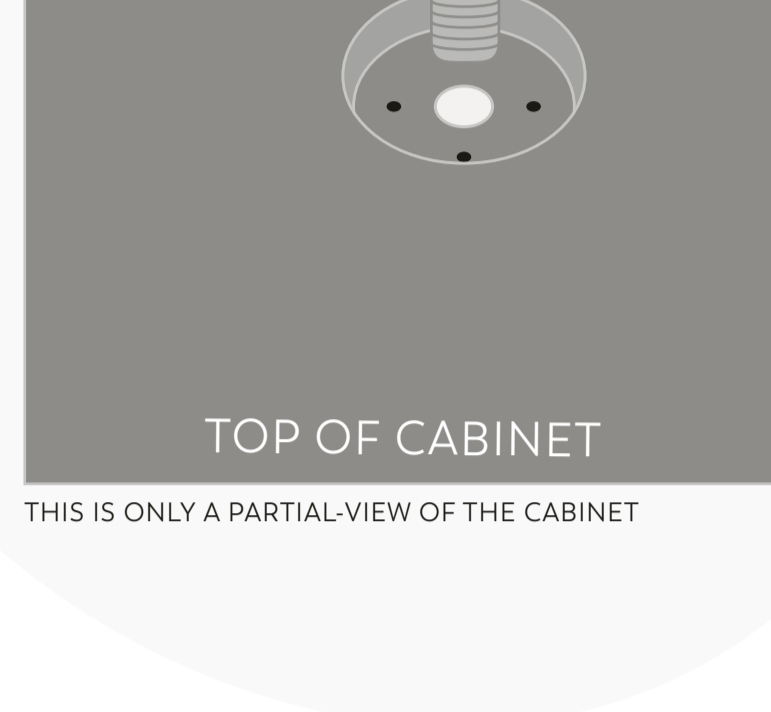

COMPLETED

STEP 4

Install the aluminum tube by screwing it into the flange. The threads on the tube will be facing down.

TIP: Don't over tighten flange should be hand tightened so it is not loose.

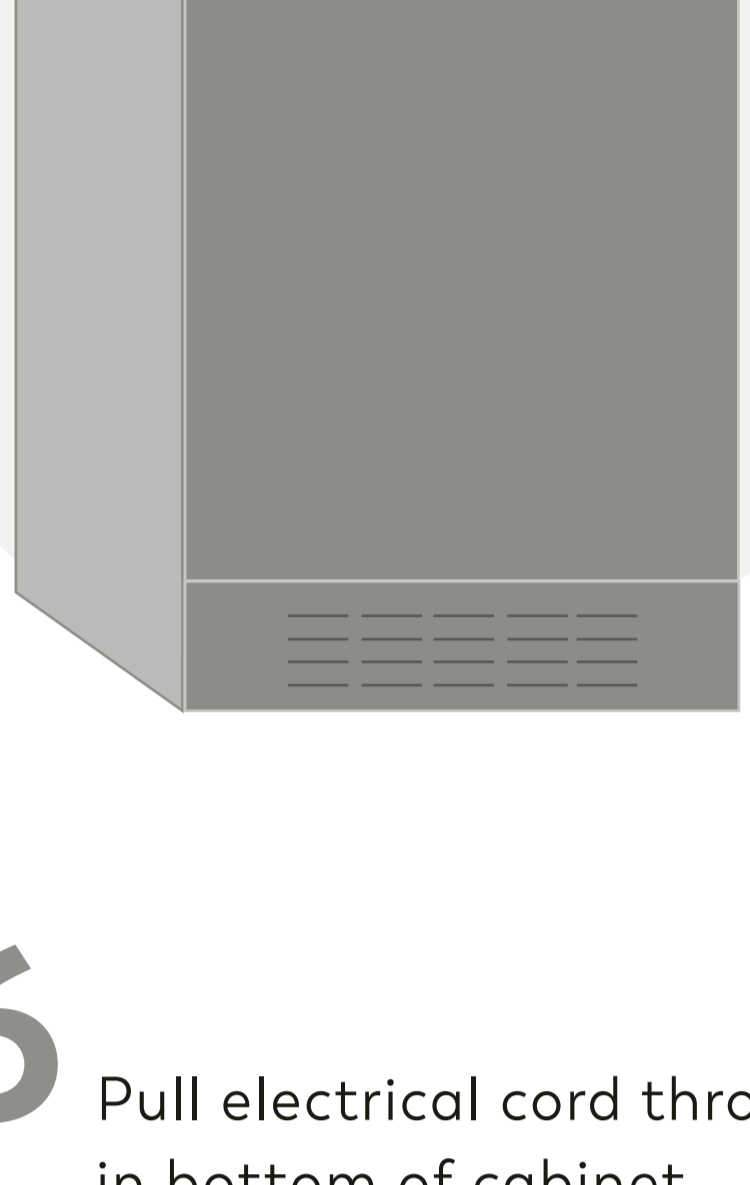

TOP OF CABINET

THIS IS ONLY A PARTIAL-VIEW OF THE CABINET

STEP 5

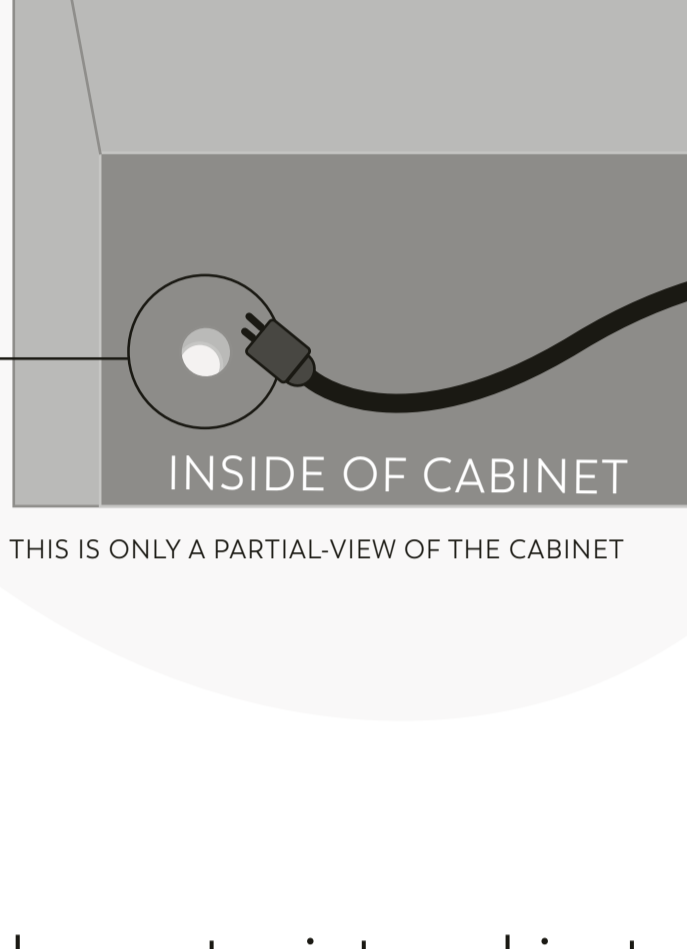

Unpack kegerator and remove all packing material.

TIP: Be sure to remove plastic cap inserted on the top of the kegerator

STEP 6

Pull electrical cord through the hole in bottom of cabinet

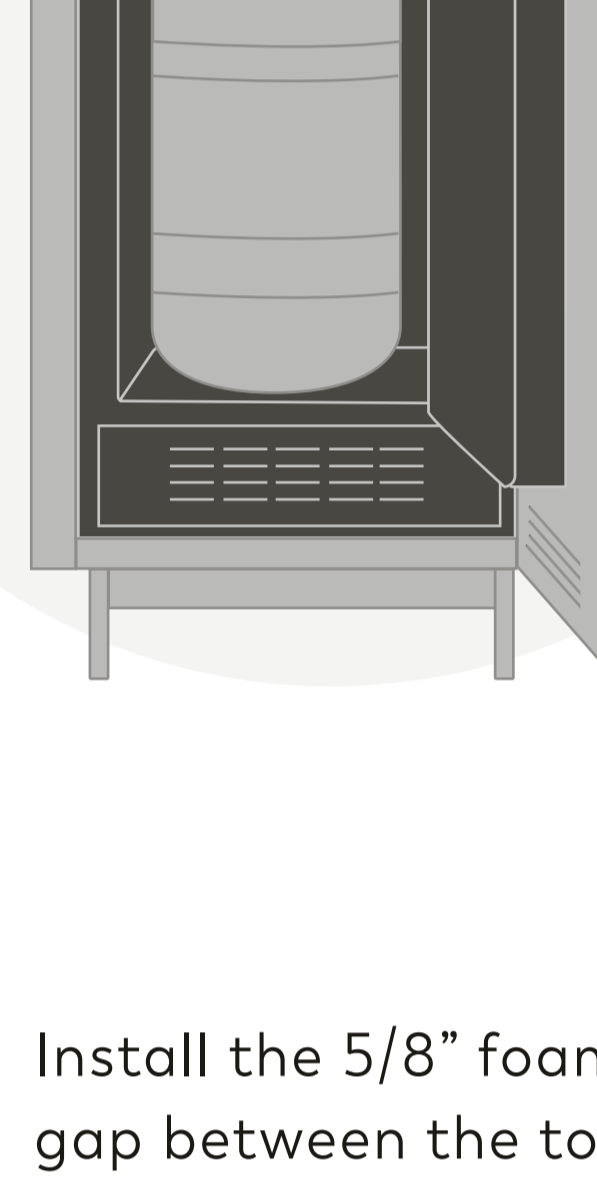

INSIDE OF CABINET

THIS IS ONLY A PARTIAL-VIEW OF THE CABINET

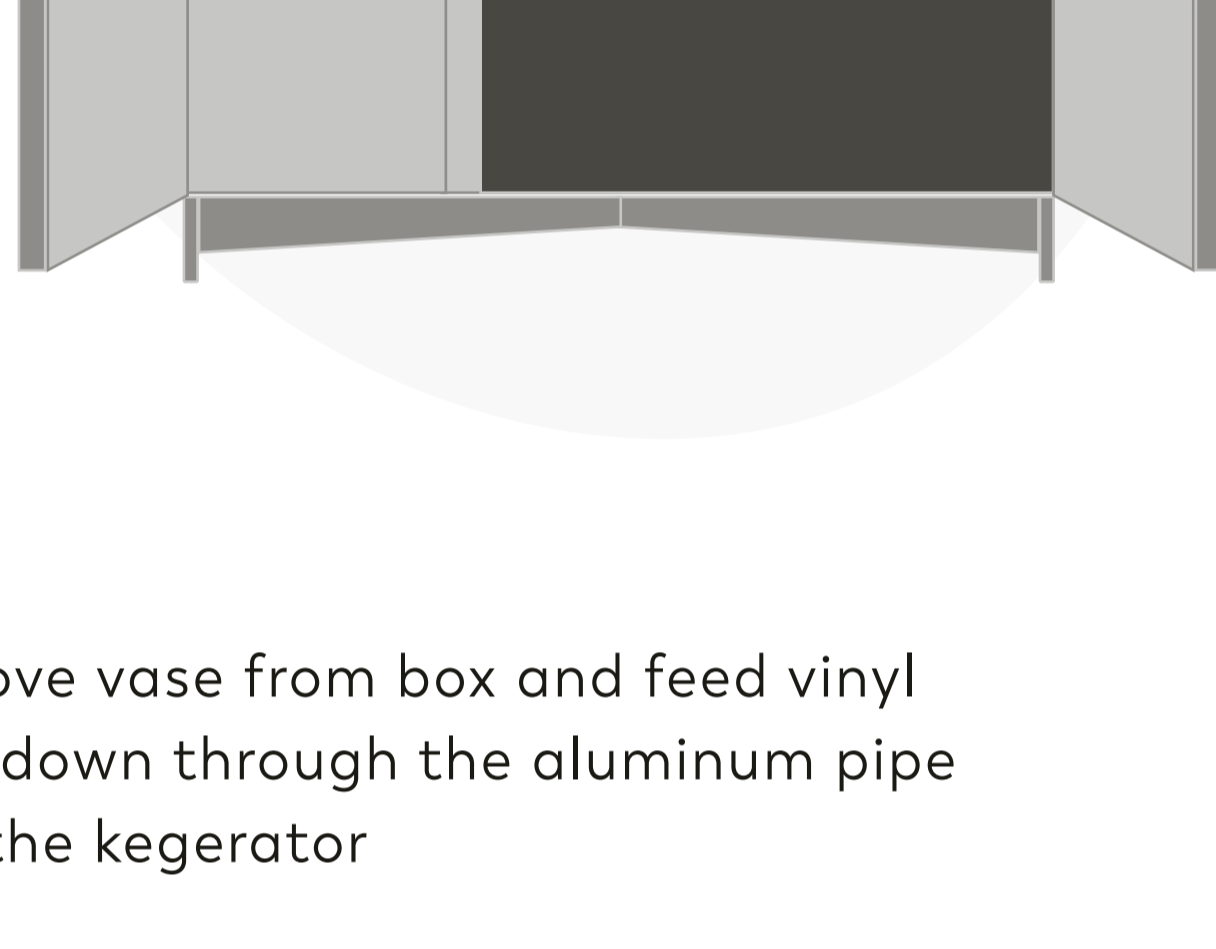

STEP 7

Carefully slide kegerator into cabinet and align the holes on top of kegerator and on top of cabinet/flange.

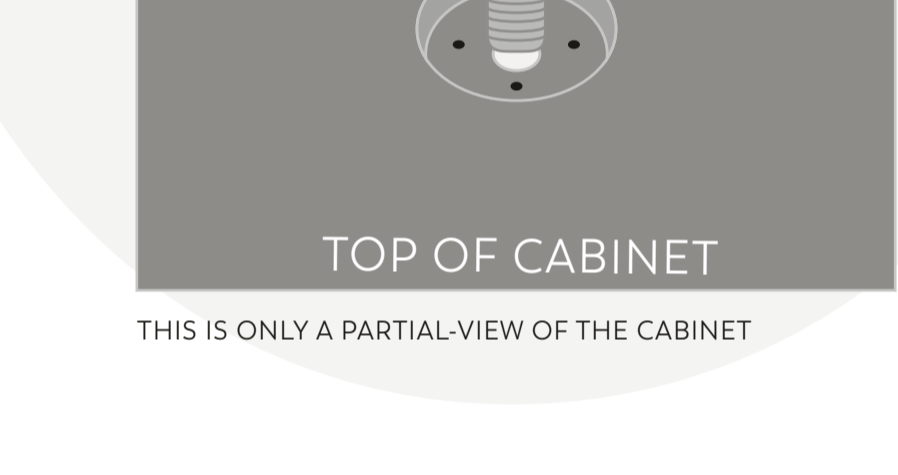

STEP 8

Install the 5/8" foam insulation in the gap between the top of fridge and the underside of the aluminum flange inside the cabinet.

STEP 9

Remove vase from box and feed vinyl tube down through the aluminum pipe into the kegerator

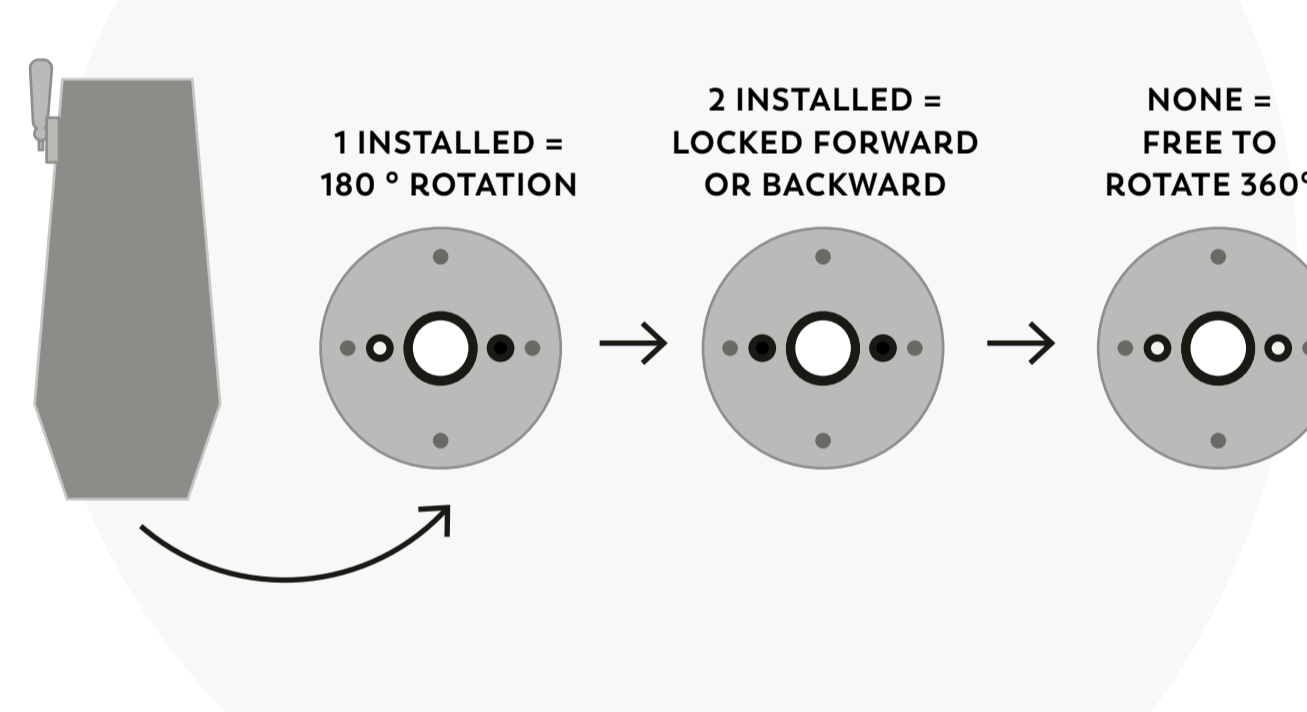

TOP OF CABINET

THIS IS ONLY A PARTIAL-VIEW OF THE CABINET

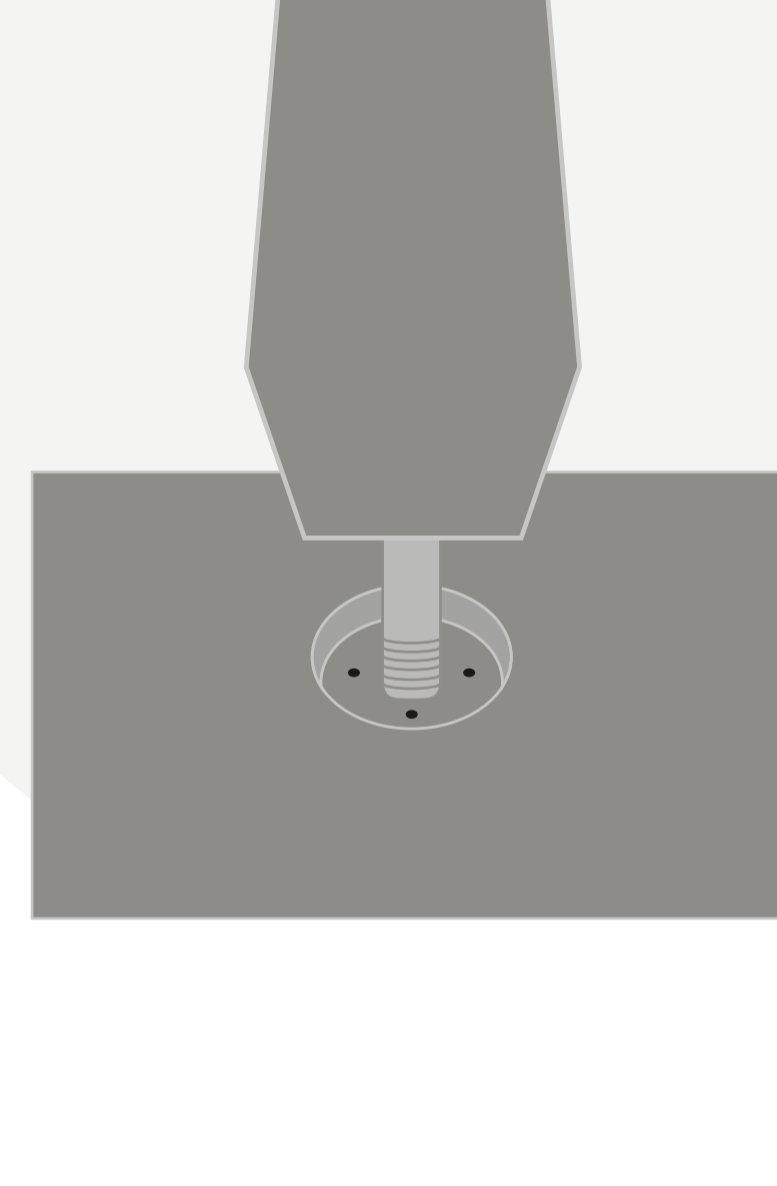

STEP 10

On the bottom of the vase, the black set screws are used to allow the tap to lock or rotate. The set screws in relation to the half moon on the flange, determine what direction your tap can rotate. It can also prevent rotation by locking in the forward or backward facing directions

STEP 11

Lower the tap tower on to the aluminum tube and line up your set screws with the half moon.

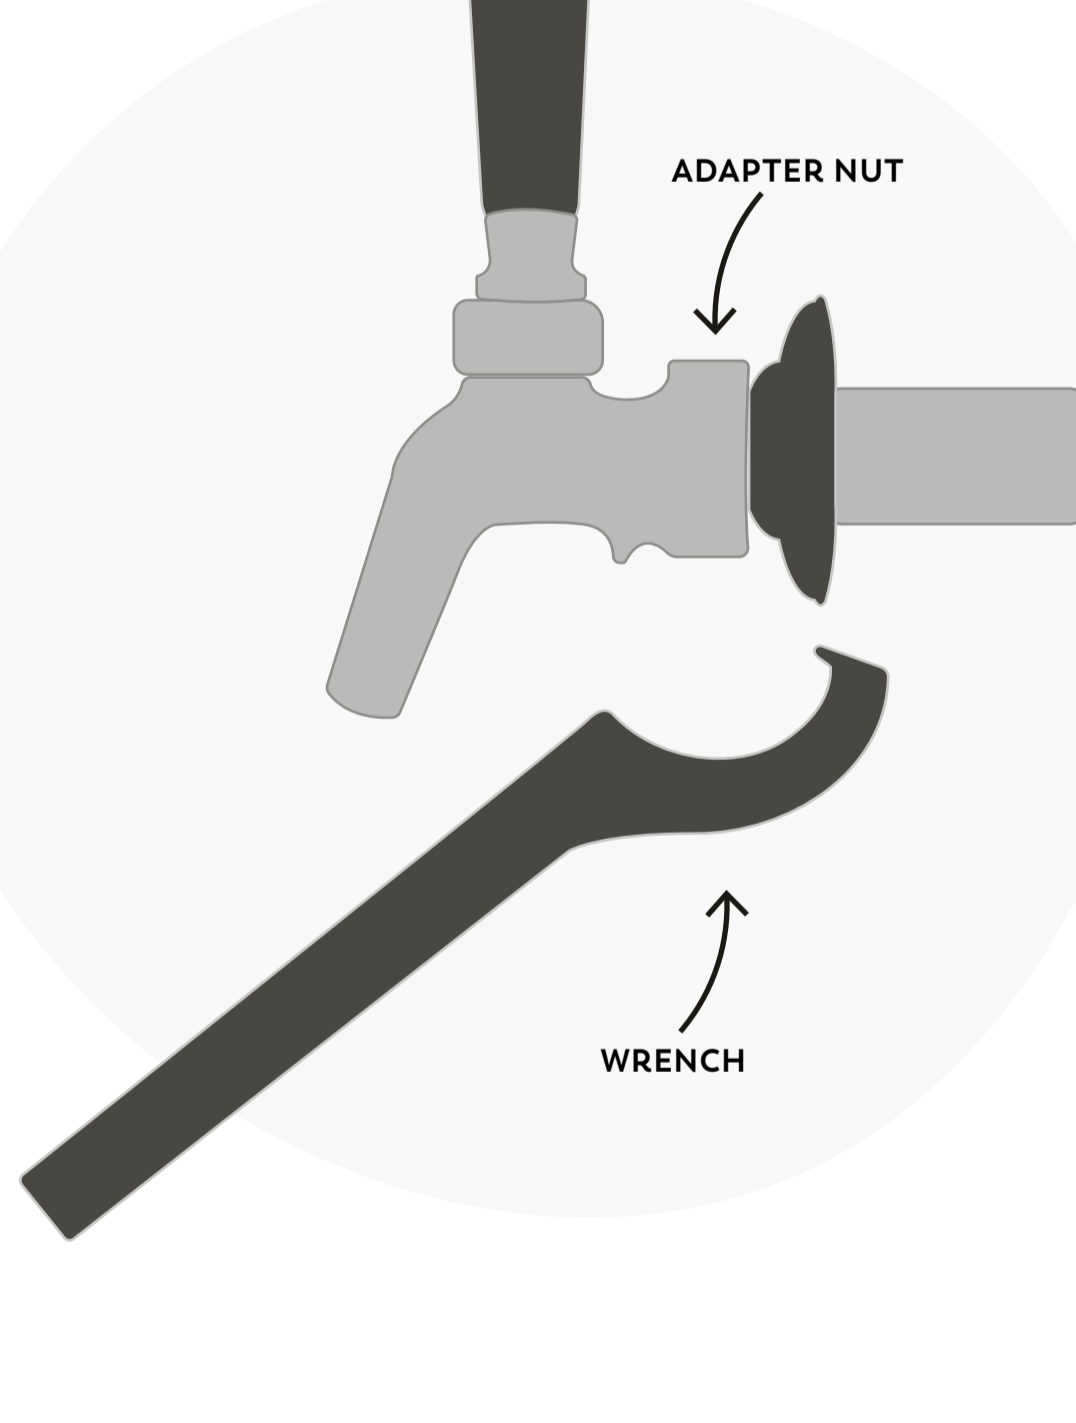

STEP 12

INSTALL TAP FAUCET

Take faucet and align it upright so the handle is facing the ceiling. Place firmly against the adapter connection of the tap tower and hand tighten the round nut to secure the faucet in place. The faucet wrench will be used to tighten further.

Using one hand to firmly hold the tap in place, align the nubs on the wrench with the hole of the adapter nut and tighten further. Obtaining a tight fit but don't overtighten such that the round nut begins to deform.

TIP: These are reverse-threaded so remember, **lefty-tighty, righty-loosey!**

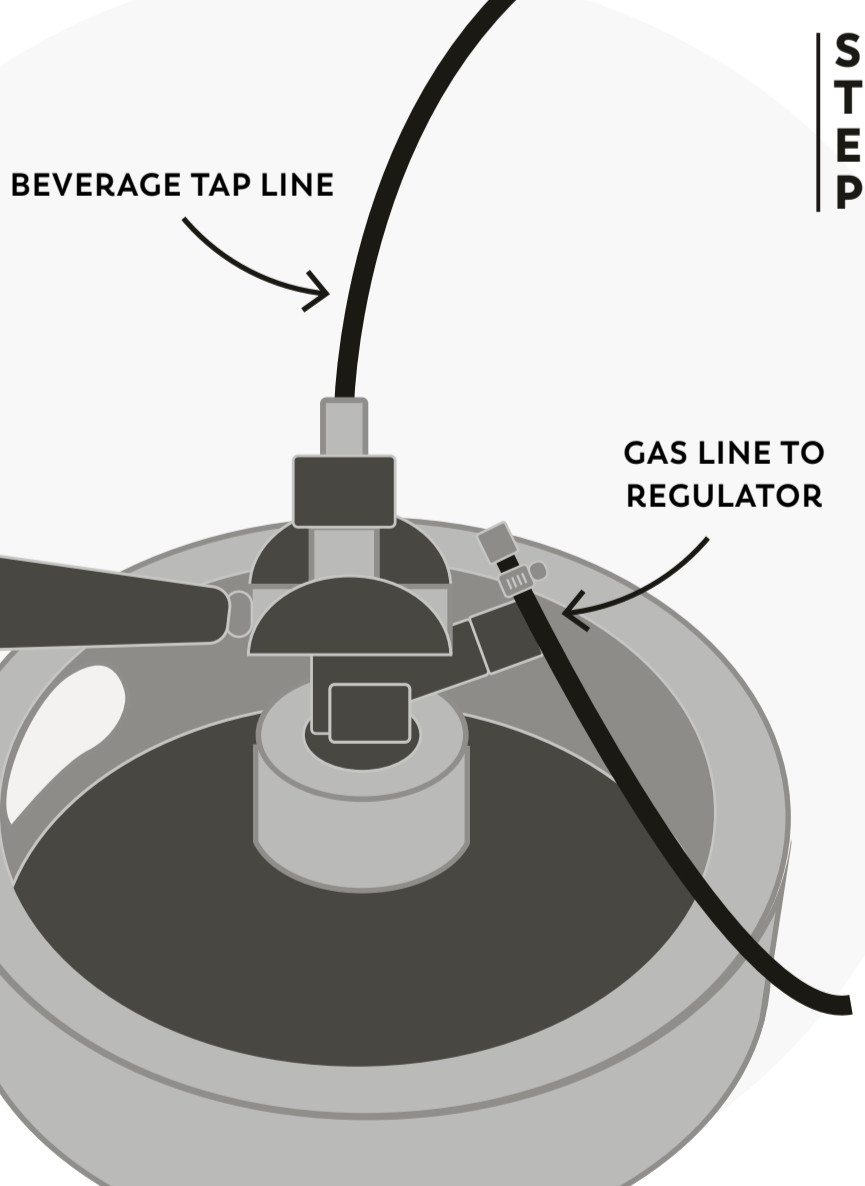

ADAPTER NUT

WRENCH

STEP 13

Slide the hose clamps over both lines. Connect 3/8" clear vinyl beverage line to the top of the keg coupling. Then connect the colored (red or blue) gas line to the side of the coupling. Secure in place with hose clamps.

TIP: Soak the lines in hot water for 60 seconds before you connect the lines to make them more pliable and easier to install on the barbed fittings of the coupling

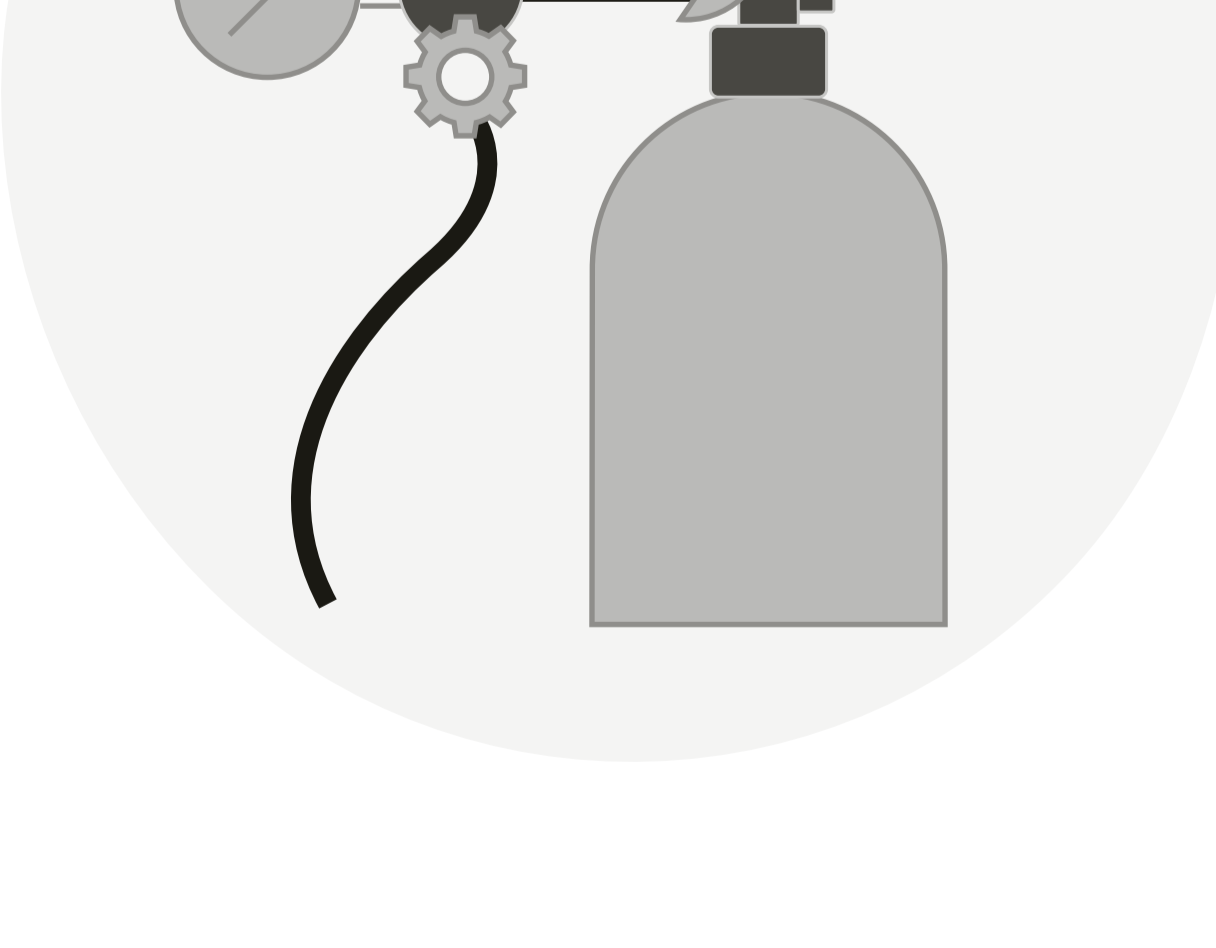

BEVERAGE TAP LINE

GAS LINE TO REGULATOR

STEP 14

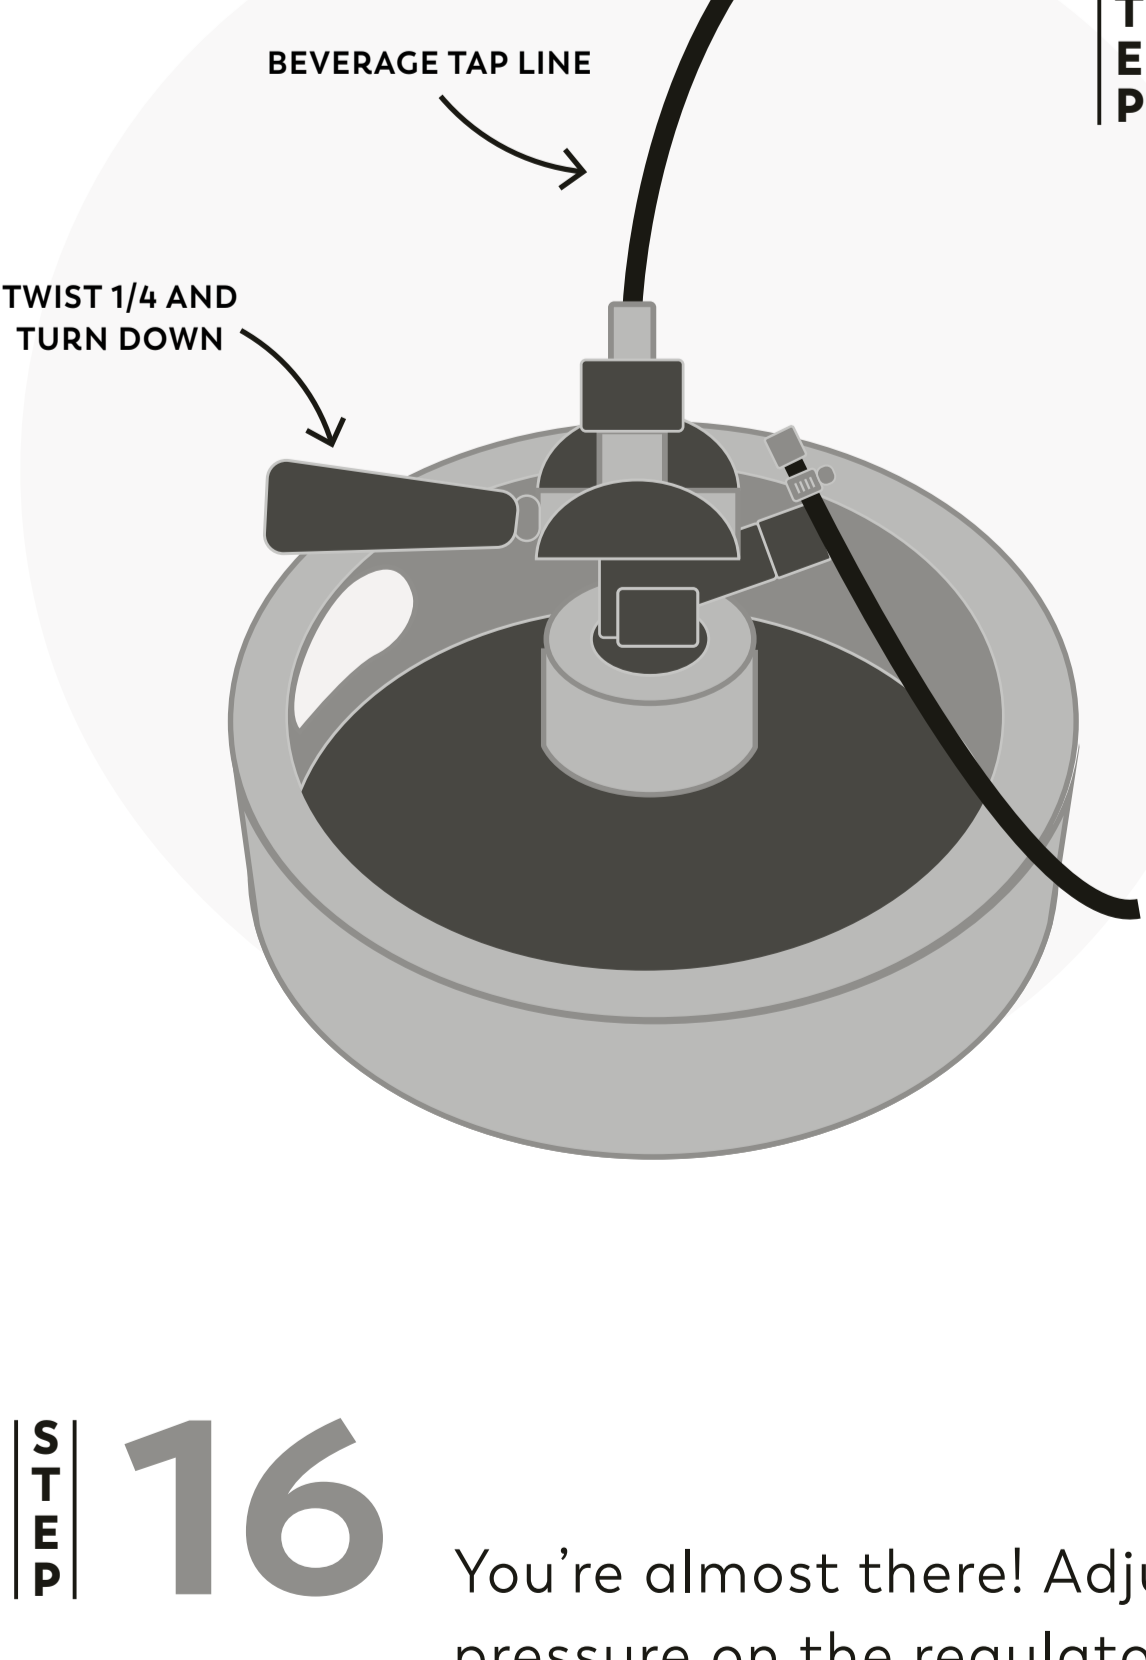

Connect the CO2 tank to the regulator with an adjustable wrench. Make sure the rubber washer is in place before finally tightening the connection.

STEP 15

Make sure the faucet is closed (handle pushed back) before tapping the keg.

To tap the keg, twist the coupling down into the keg, 1/4 turn to connect it, and press the lever down to lock the coupling in place.

BEVERAGE TAP LINE

TWIST 1/4 AND TURN DOWN

STEP 16

You're almost there! Adjust the pressure on the regulator to get your perfect pour.

TIP: Use Beverage Factory's How to Set Up a Draft Beer Regulator to a CO2 Tank Video for help <https://youtu.be/Qa7P5qKf1e4>

ADJUST PRESSURE TO GET YOUR PERFECT POUR

THERE YOU HAVE IT. NOW WHAT ARE YOU WAITING FOR?
