

Night Master Trident

Lamping was once a necessity in my career but has now progressed to an enjoyable pastime. Back in the day, we used big lamps and needed to work as a slick team between the lamper and shooter to ensure the target was illuminated and shot seamlessly. Over the years there have been great advancements in night vision and thermal technology but there is still something pleasurable about using a lamp.

I have been lucky enough to get my hands on the Night Master Trident. This lamp has a lot of features built into a small frame. The Trident received its name due to the Tri-LED bulbs built into the body. The three bulbs vary depending on the unit and specifications you require. The unit I have contains white, red and amber LEDs, which make a perfect trio for traditional lamping. There are also variations with infrared bulbs for the night vision enthusiast. An operator can easily flick between different bulbs with a quick twist of the dial. This makes the lamp very versatile and does away with the hassle of swapping filters or different heads to the lamp. The LEDs are also switched without affecting anything else, and swiftly if the situation requires. It can pick up eyes with its beam out to 1,000m and clearly identify quarry across the range of LEDs out to 350m.

As is the case with all Night Master products, the build quality is fantastic. The impression is that the lamp is certainly built to last. The bracket provided with the lamp is ideal for mounting the Trident onto your rifle scope.

Night Master also sells a range of additional attachments that can be used in conjunction with the Trident, including a pistol grip that converts the lamp into a perfect handheld unit. The beam can be

focused to produce a tighter and bright field of view down range, as with other Night Master lamps. The quiet power button on the rear of the lamp also allows the brightness to be dimmed by twisting.

I am really impressed with this new tool for night-time shooting and it will be an ideal piece of kit for rabbiting, ratting or foxing in a range of situations. The team at Night Master has produced a fantastic and well thought-out product. ■
