

Independent Maize Trial – Waikato

This independent trial run by PastureFirst in Waikato, NZ was a plot replicated field trial conducted between October 2023 and February 2024 to evaluate the effect of EM Fert Enhance on maize yield.

The results showed a statistically significant increase in yield was achieved by using EM Fert Enhance - 34.1t, over the control - 30.0t. EM Fert Enhance was applied at a rate of 2 x 10Kg per ha applications and provided a significant economic response over the control.
