The articulating arm allows you to rotate, turn, and tilt for your optimal positioning. Heavy- duty materials and construction.

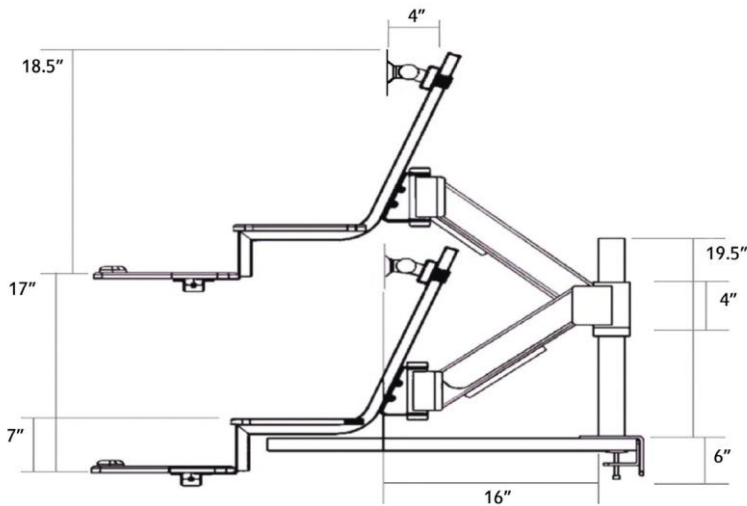

THE RISING WORKSTATION

About Product

The Rising Workstations Sit Stand Workstation securely clamps to your existing desk so you can alternate between sitting and standing while you work. It allows you to achieve an ergonomic position thanks to the height adjustable monitor mount, work shelf and keyboard or mouse tray. The base installs to the back of your desk using a clamp mount and works for desks and tables 32" or less in depth. Unique feature is its locking pneumatic adjustment mechanism. Pressing the lever allows the riser to adjust in height, and letting go locks the arm in place. Pneumatic height adjustment, which works easily by pressing the pneumatic lever under an upper writing surface platform, allows for 17" of vertical movement.

You can articulate the arm in multiple directions to suit how you work. In addition to the vertical range of motion, this also has a full 360 degrees of motion around the mounting arm, so the monitor and keyboard arm can swivel around for added versatility. There is inbuilt cable management to help you keep your desktop tidy. You can adjust the monitor mount and keyboard tray independently to achieve an ergonomic position to suit you.

Specifications

- ➔ One-Touch Height Adjustment for Sit-Stand Ergonomics.
- ➔ Lever raises or lowers pneumatic arm for smooth height adjustment.
- ➔ Lever attaches to left or right side of keyboard tray.
- ➔ Sections move together for seamless sit-stand transitions.
