

# HOW TO FIT YOUR SNUGSPRO

## STEP 1. IDENTIFY YOUR LEFT AND RIGHT SNUG

Look at the colour of the engrave on your Snugs.  
Blue represents the left ear and red represents the  
right ear

## STEP 2. ATTACH TO YOUR EARPHONE

The Snug has been designed to fit the earphone. Ensure you attach the right Snug to the right earphone, and vice versa. If you have True Wireless earphones, the sensors should line up correctly, and the Snug will click into place

## STEP 3. PLACE IN YOUR EAR

Put the ear canal part of the Snug into your ear first. Secure in place by tucking the top of the Snug into your helix. Always take the Snug out of your ear by removing from the helix first. As they are custom fit to the exact shape of your ears, they should naturally slot into the correct, comfortable position

## STEP 4. CHECK THE FIT

Test out your SnugsPro. If you have any concerns with the fit, please let us know and we can remake your Snugs with adjustments
