UPPER CONTROL ARM ATTACHMENT

IMPORTANT NOTE:
 During assembly, upper & lower spacers are specific. Failure to follow these instructions will result in damage of all components.

Upper spacer has 9/16" hole

Lower spacer has 3/4" hole

Important Note:
 When removing the factory upper control arm bolt, you will need to bend the inner fender well on both sides of the truck. Once installation is complete, bend it back to its original position.

INSTALLATION NOTES

The factory manual is required for torque specifications on all hardware. This procedure will involve the removal and re-installation of many parts. Always use factory replacements for worn or damaged parts. Always use new cotter keys during re-installation.

Some items are not shown for clarity.

In order to retain 4 wheel drive, new axles must be purchased from Total Chaos. Please call for more information.

Page 2

Apply generous amounts of teflon based grease to outside of sleeves and I.D. of urethane bushings.
(Teflon based grease is available from Total Chaos. Part # - Superlube)

Torque item #18 to 100ft lbs.

Page 5

Torque item #27 to 100ft lbs.

Item #33 - Weld as shown, inline with rear lower a-arm shock tab face. Grind frame to bare metal before proceeding to weld. Placement of brake hardline may need to be adjusted on frame before welding.

Page 6

After installation is complete (shocks installed), adjust limit strap so that there is a 1/4" gap between the high misalignment spacer and the uniball cup on the upper control arm (see model below). Limit straps will stretch over time and will need to be adjusted periodically to prevent damage to shocks and uniball components.
