

APPALACHIAN
Tanzite StoneDecks

A photograph of a modern wooden deck with a dark brown railing. The deck is built on a grassy lawn. In the background, there is a house with light-colored horizontal siding and a prominent brick chimney. A window is visible on the house. The text 'STONE MAKES THE BEST DECK' is overlaid in large, bold, orange letters.

Tanzite StoneDecks

What's better than Lifetime Warranty?

Tanzite STONEDECKS are made of natural stone, and what can you really do to stone, which is why we warranty it for life.

A photograph of an outdoor deck with wooden planks and a white railing. In the background, there is a wooden table and chairs with white cushions. The scene is set against a red brick wall. The lighting suggests a sunny day, with shadows cast across the deck. An orange rectangular graphic is in the top left corner, and another is in the bottom left corner.

ABOUT TANZITE

Tanzite STONEDECKS is a Canadian-developed, patent-pending, stone tile decking product. Used to build and resurface decks, stairs, landings, balconies, rooftops, patios and walkways.

Like man-made diamonds, Tanzite is a stone made using incredible heat and pressure.

This ensures you get a perfect stone, that is the perfect colour and will last in the harsh outdoors for a lifetime.

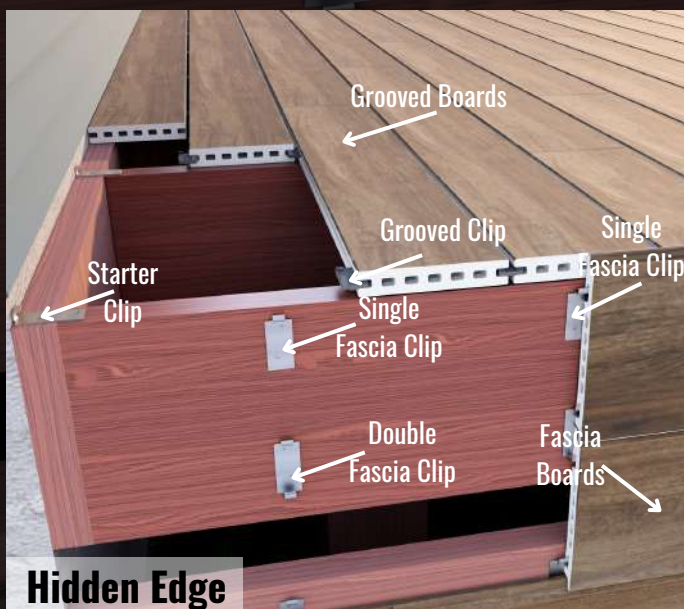

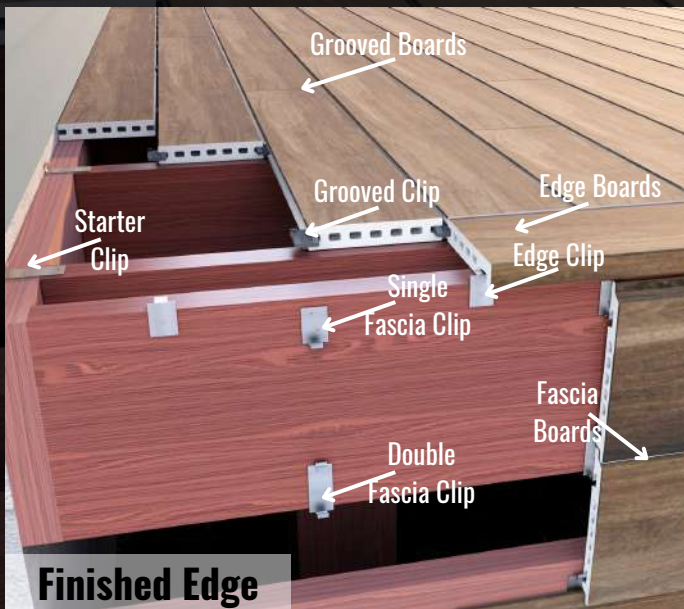

Appalachian Collection

This is what a low-maintenance deck should be! Tanzite Appalachian Collection is a stone decking system that installs with hidden fasteners so there are no visible screws! The cost, installation, and deck structure are similar to Composite decking however, this is NOT made of plastic. It is literally stone that we make the same way mother nature does, using extreme pressure and heat to melt together the perfect-shaped stone for your deck.

How It Works

The Appalachian decking system is built over a new, or existing, deck frame made from wood, or metal. It works great for elevated decks, docks, stairs, or installed on the ground.

Appalachian Collection

- Doesn't scratch, isn't slippery, stays cooler
- Easily installs over wood framing
- Easily installs over metal deck framing
- Rain falls through the boards
- Non-destructive installation easy to reuse
- Does not contain plastic or PFAs or other chemicals
- Made using sustainable materials
- Durable long life. High-quality low replacement.
- Easy to replace breakages
- No chemicals required for maintenance
- Designed to reduce construction waste

Composite

- Easily scratches
- Gets extremely hot in the sun
- Easily installs over a wood frame
- Rain falls through the boards
- Colors don't look very realistic
- Has a rough texture while still being slippery when wet
- Warranties are extremely limited
- Can't be waterproof
- Can't cover existing decking
- Can't cover concrete
- Can't handle a pressure washer
- Can't use cleaning chemicals
- Expands and contracts so much that it's hard for joints to look proper
- Is made with plastic

Appalachian Colors

Aged Teak

The beautiful variations of light browns through to medium browns and gray tones make Aged Teak perfect for subtle interest on any modern deck.

American Walnut

This classic dark brown color provides the same richness to your outdoor living space that it has been providing to indoor flooring and woodworking for well over a century.

Driftwood

This luring color has a high contrast gray's reminiscent of wood that has won many battles against wind and water throughout its time. It's modern, yet enduring.

Silver Maple

The coolest of our colors excels on both South facing decks by challenging the sun's heat, and on North facing decks by brightening a shady space.

White Ash

A staple choice often seen in both traditional and modern Farmhouse style homes. White Ash is loved for its timeless look and ability to brighten a space through its light brown tones.

Ebony

This rich black color adds a touch of timeless sophistication to your deck, whether used on its own or paired with other colors. Elevate your outdoor space with Ebony's versatile and enduring elegance.

Option 1

Option 2

Option 3

Look & Color

Set your samples next to each other and rate how realistic and beautiful each one looks.

Does it work with the siding?

Set each sample where the project will be built and rate how much you like the look.

How Hot Does it Get?

Set your samples in direct sunlight for a while and see how warm they got.

Does it Scratch?

Use a knife, or a sharp rock to mimic years of use of your deck, like moving chairs around.

Can You Clean it?

Use your pressure washer to see if they get damaged. or will cleaning chemical hurt the finish over time?

Will it Melt?

To mimic dropping a steak hot off the bbq, heat up a metal knife to see it leaves a mark.

Is it Slippery?

While you're pressure washing them, see how slippery each sample is when wet.

Environmental Impact

Does the product contribute to deforestation or use non-recyclable plastics?

Total Score

Combine your score from each test to determine which sample would be best for your project!
