

IFAB AED

the world's first body worn AED and bleed control kit

Covert and overt options for military, medical, close protection, and civilian use. Thanks to the **IFAB** and **CellAED®**, it is now possible to carry an AED, as well as life- saving bleed control kit including the 'Big Four' you'll need to control traumatic haemorrhaging wherever you go. This is unprecedented and will change the way we operate in austere and hostile environments, on the street, and in the workplace, as well as in discreet close protection settings.

The first-of-its-kind **Individual First Aid Belt (IFAB)** gives users unparalleled peace of mind knowing that they have the core equipment required to save a life on their person, at all times.

The IFAB is made up of two main components:

THE MAGCORE

- The mounting platform for the IFAB. It has two metal plates that line up with reciprocating magnets on the second component, the **MAGCARD™**. It is low profile and sits comfortably on the user's lower back/waist.
- The **MAGCORE** comes in two variants:
 - The **MAGCORE Molle** attaches to any existing molle pals retention system
 - The **MAGCORE Belt** attaches to any belt up to two inches in width.

THE MAGCARD

- Attaches to the **MAGCORE** via its bespoke rare earth magnets with more than 12kg pull, and Velcro. Its pouches and sleeves, made of the highest quality materials, carry the AED and all the kit you need to control the bleed.

The **IFAB AED** with full control bleed kit weighs less than a kilogram (dependant on products included), and measures 31cm by 12.7cm.

Price: £760.00

Lead time: If product is in stock, 1-2 weeks. If not in stock, up to 8 weeks. Please enquire for accurate, up-to-date lead times.
