

Respond first with confidence. It can make all the difference.

The world's first body worn AED and bleed control kit.

Thanks to the IFAB™ and CellaAED®, it is now possible to carry an AED, as well as life-saving bleed control kit including the 'Big Four' you'll need to control traumatic haemorrhaging wherever you go. This is unprecedented and will change the way we operate in austere and hostile environments, on the street, and in the workplace, as well as indiscreet close protection settings.

The first-of-its-kind Individual First Aid Belt (IFAB™) gives users unparalleled peace of mind knowing that they have the core equipment required to save a life on their person, at all times.

Covert and overt options available for military, medical, close protection and civilian use.

Our products are designed by military veterans and active close protection professionals, and are made using high quality, military grade materials.

Price: £760

IFAB AED

The IFAB™ is made up of two main components:

THE MAGCORE™

Is the mounting platform for the IFAB™. It has two metal plates that line up with reciprocating magnets on the second component, the MAGCARD™. It is low profile and sits comfortably on the user's lower back/waist. The MAGCORE™ comes in two variants:

1. The MAGCORE Molle™ attaches to any existing molle pals retention system
2. The MAGCORE Belt™ attaches to any belt up to two inches in width.

THE MAGCARD™

It attaches to the MAGCORE™ via its bespoke rare earth magnets with more than 12kg pull, and velcro. Its pouches and sleeves, made of the highest quality materials, carry the AED and all the kit you need to control the bleed.

The IFAB AED™ with full control bleed kit weighs less than a kilogram (dependant on products included), and measures 31cm by 12.7cm.
