

Sliding Doors

Best for: Tight bathrooms

A glass sliding shower door is very common and slides open and closed on a track attached to the floor and ceiling. It's also known as a bypass door. This style of glass shower door is ideal for narrow bathrooms with closely-spaced fixtures where there's no room for a hinged door. However, the shower itself needs to be wide enough for one glass door to slide completely over to the other side.

Sliding shower doors are considered framed or semi-frameless (the tracks may or may not be considered as frames). Framed sliding shower glass doors will typically cost less than semi-frameless sliding doors.

Pros

Common and affordable

Good for small bathrooms

Cons

Tracks can be trip hazards

Tracks can corrode

Sturdy design

Not as modern an
aesthetic
