My M.A.T.E Pet Protect & Shine Spray

My M.A.T.E Pet Protect & Shine Spray

Ingredients

- Australian Tea Tree Leaf Extracts
- Coconut Oil
- Australian Eucalyptus Oil Extract
- Australian Citronella Oil
- Australian Rosalina Oil
- Australian Lemon Myrtle Oil
- Peppermint Oil
- Aloe Vera Extract

Benefits

- Shiny Coat
- Easy Grooming
- Deodorising
- Natural Insect Repellent
- No Harsh Chemicals
- Leaves Pet Smelling Fresh
- Australian Made

My M.A.T.E Pet Protect & Shine Benefits

About this product:- This product has been uniquely formulated from some of nature's best non toxic ingredients. The combination of ingredients has an exotic, delicate and soothing fragrance. The ingredients conditions your pet's coat, for ultra smooth and shiny texture and makes them smell instantly fresh.

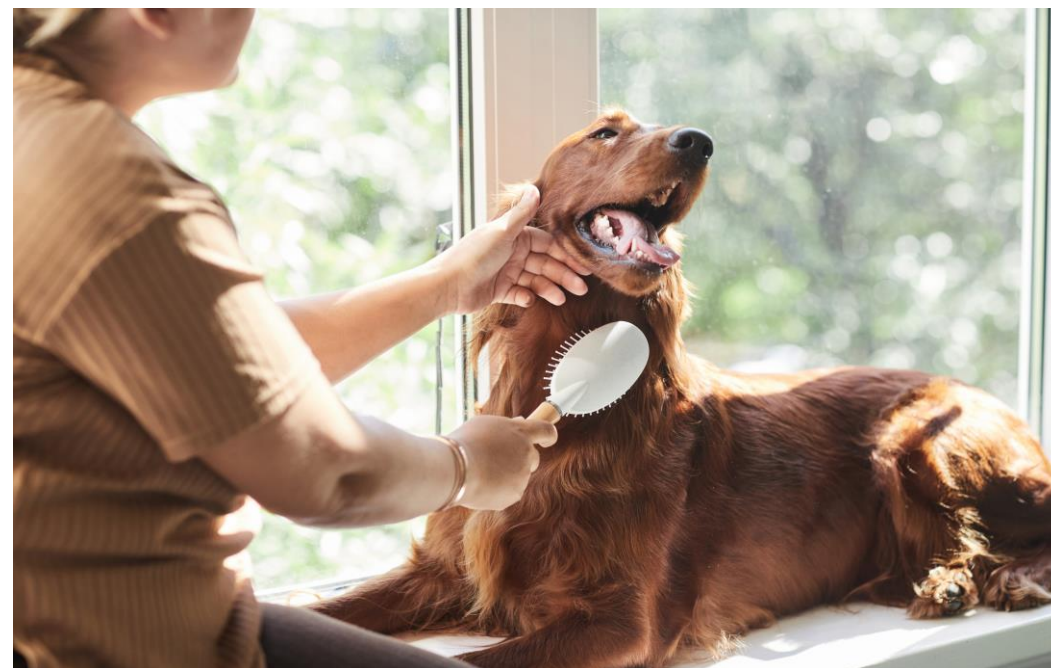

My M.A.T.E Pet Protect and Shine not only makes grooming easy, it also refreshes your pet and efficiently masks, deodorizes and neutralizes pet odours while nourishing and brightening the coat at the same time.

- No Harsh Chemicals:-** Paradise Nutrients avoids using harsh chemicals in our pet products, choosing only the best natural ingredients for the benefits of your pets.

- Made In Australia:-** Made in our cosmetic manufacturing facility and maintaining our uncompromising quality standards across the entire process, even from growing some of our ingredients to manufacturing and packaging. All Paradise Nutrients products are manufactured exclusively in Australia.

Use Only on Animals. Safety:- Always keep out of reach of children.

Animal Use Only. Unsuitable for felines (cats)

Coconut Oil

Coconut oil is a natural ingredient that offers many benefits when used on your pet's coat. Coconut oil is a rich source of fatty acids that can nourish and hydrate the coat, preventing dryness and breakage.

Lauric acid in Coconut oil has a low weight and straight structure, which allows Coconut oil to easily penetrate the hair shaft. This unique structural quality makes Coconut oil great for hair because it can deeply restore hydration, reduce dandruff, repair split ends and prevent hair protein loss.

Coconut oil can also add a natural shine. On its own, Coconut oil would not make an effective coat spray as some Coconut oil blends can be greasy and messy - which is why we formulated an easy, non-greasy coconut ingredient for your pet.

Coconut oil also contains vitamin C, vitamin D, Iron, Calcium, vitamin A, vitamin D, vitamin C, vitamin B1, vitamin B2, vitamin B3, vitamin B5, vitamin B6, vitamin B12, Choline, Vitamin K and Vitamin E.

Melaleuca Alternifolia

There are around 140 compounds that make up the extracts from this amazing tree. Traditionally Melaleuca Alternifolia has been used topically as a medical aid because of its anti-bacterial, antifungal, antiviral and antimould properties.

Paradise Nutrients includes Tea tree extracts from the whole plant not just from the oil. This is because the whole tree has many helpful medicinal benefits for both man and animals.

The benefits from Tea tree are numerous as it has been proven to contain certain compounds and minerals that support a healthy immune system. It is thought that many viruses, bacteria, fungus and mould thrive in a pet's living environment, especially in stables. This is where PN's Pet Protect and Shine Spray has the potential to deter or kill those harmful pathogens that your pet may be exposed to.

Original Quality and Safety

The Tea tree oil and Melaleuca extracts that are used in PN products come from an area in Australia where the Mother trees are still standing. These trees have been tested to be over 1000 years old. The compounds in these trees and their offspring contain the original DNA which guarantees original quality and superior strength of the extracts.

It is also well documented that Tea tree oil contains some volatile compounds composed of terpene hydrocarbons, mainly monoterpenes, sesquiterpene and their associated alcohols. Terpenes are volatile, aromatic hydrocarbons and may be considered polymers. Paradise Nutrients removes these volatile compounds through a special process without affecting the quality of the active ingredients.

Many Tea tree oils are from GMO Tea tree seedlings, which when tested contain higher levels of the hydrocarbons than the oil that comes from our original Mother tree seedlings.

Eucalyptus oil

The Australian aborigines used Eucalyptus leaves to treat wounds and prevent infection as well as repelling mosquitoes and other biting insects that can carry diseases. Avoiding their bites is our best defence. The compounds from Eucalyptus are an effective natural insect repellent for your pet.

The insect repellent activity of Eucalyptus oils has been due to the components such as 1,8-cineole, citronellal, citronellol, citronellyl acetate, p-cymene, eucamalol, limonene, linalool, α -pinene, γ -terpinene and α -terpineol.

Antifungal components in Eucalyptus oil is an excellent ingredient for pets as it helps to repel flies and insects as well as combats the yeast-like fungus, *Malassezia*, the most common cause of flaky skin and dandruff. Its anti-inflammatory and pain-relieving properties, coupled with its natural cooling sensation, makes Eucalyptus ideal for soothing sun damaged skin. Its antibacterial properties also protect the skin from infection.

Aloe Vera is high in Vitamins & Minerals:

Aloe Vera is the most ideal natural ingredient for moisturising skin. It contains humectants - substances that attract water from the air or from deeper inside the skin - it's thought to be especially beneficial for dry skin types. Aloe Vera specifically contains mucopolysaccharides, which binds moisture into the skin. It also has cohesive effects by sticking together flaking epidermal skin cells, resulting in softer skin and improved skin integrity.

Aloe Vera also contains a compound called Glucomannan, which can help with wound and sunburn healing by improving collagen production. That healing is helped along by antioxidant vitamins C and E. Furthermore, the antibacterial properties allow Aloe Vera to be useful for the treatment of minor cuts and wounds to prevent infection.

Aloe Vera contains many Vitamins including A, C, E, Folic Acid, Choline, B1, B2, B3 (Niacin) and B6. Aloe Vera is also one of the few plants that contains vitamin B12. Some of the 20 minerals found in Aloe Vera include: Calcium, Magnesium, Zinc, Chromium, Selenium, Sodium, Iron, Potassium, Copper and Manganese.

Aloe Helps Reduce Inflammation.

Aloe Vera contains 12 substances including B Sisterole, which can help to slow down or inhibit inflammation. This may be able to help with painful joints due to stiffness and help improve joint flexibility.

Citronella Oil

Citronella oil is a naturally occurring insect and animal repellent distilled from two grass varieties. It is yellow to brown and has a grassy/floral smell. Citronella oil is a mixture of many components. The exact composition varies by grass variety. However, the main components are citronellol, citronellal and geraniol. Citronella oil is also commonly found in foods and beverages as a flavouring agent. It is Generally Recognized as Safe (GRAS) as a food additive by Food and Drug Administrations.

Lemon grass, is one of the plants used in Citronella. It is rich in folic acid, folate, zinc, magnesium, copper, potassium, iron, phosphorus, manganese, calcium and vitamins A, B and C. Lemongrass is one of the most beneficial food items to add to your weekly diet. Also known as fever grass, Lemongrass tastes and smells like lemon, but is sweeter and milder. It has been used for centuries to treat lots of health issues and conditions.

Dried or fresh, Lemongrass boasts plenty of beneficial medicinal properties such as anti-inflammatory, analgesic, anti-depressant, antiseptic, antipyretic, antibacterial, astringent, antifungal, carminative, febrifuge, diuretic, galactagogue, sedative, insecticidal and has anticancer, properties.

Rosalina Essential Oil

One of the latest native Australian botanicals to be introduced as an effective essential oil is Rosalina Oil. Also known as Melaleuca Ericifolia or Lavender Tea tree oil, it carries a spicy lemony and floral aroma.

It is also commonly known as Swamp paperbark. It shares some of the same constituents as Eucalyptus, Tea tree and Lavender and is often substituted as a more pleasant smelling than Tea tree essential oil.

Above all Rosalina Essential Oil benefits, it is best known to enhance respiratory health, skin health and the mind in humans, pets and horses. Due to its powerful antibacterial properties, along with the natural Linalool and Eucalyptol content, it is known to ease skin disorders, skin irritations and rashes whilst balancing oily or dry skin.

Peppermint Benefits for Pets

Observations show effective and positive results using Peppermint oil in pet products. See results below.

1. Soothes an achy stomach and helps with digestive issues
2. Cools sore muscles and joints
3. Opens the airways and promotes a healthy respiratory system
4. Reduces or alleviates a cough
5. It can perk up or energize a tired pet
6. Aids in relaxing stressed pets
7. Repels insects on your pet and in the bed or kennel
8. Treats and reduces dandruff
9. Creates a fresh aroma around the kennel
10. Contains anti-inflammatory properties
11. Gives pets a better mental clarity
12. Improves circulation

Lemon Myrtle

Lemon Myrtle is a rainforest tree native to sub-tropical Queensland and northern New South Wales, Australia. Its leaves contain a powerhouse of antioxidants that can be targeted to a wide range of applications.

We use Lemon Myrtle in our My M.A.T.E Protect and Shine Spray due to its amazing benefits offering a unique rainforest scent and is beneficial for skin care, assisting with mature or oily skin and can act as an insect repellent.

The compounds in Lemon Myrtle have antibacterial and antifungal properties which work as an astringent to help tighten skin pores and reduce irritations of skin infections, wounds and rashes.

Incorporated into our My M.A.T.E Pet Protect & Shine Spray, Lemon Myrtle has antifatigue and antioxidant properties that may assist your pet.

The Environment

Our Tea tree extracts are grown in rich alluvial soil, nestled within the confines of this natural habitat which teems with native wildlife. This is what gives our oil and extracts its purity and superior quality, seldom found in other oils. By cultivating, harvesting and distilling our oil directly on the plantation, we have the unique capability to guarantee perfection at every step of the process.

This wonderful natural oil is grown amongst the best that Australian nature has to offer in a clean, green environment. There are no factories, no pollution, no hustle and bustle. Just the sweet smell of the forest and Tea trees.

We keep our carbon footprint minimal and practice sustainable agriculture. We also protect the native animals that inhabit this distinct region, from the resident emus that live amongst the rows and rows of Tea tree to the koalas that keep a watchful eye from the bordering native gum trees.

Directions for use

Spray directly onto your pet's coat. Use a soft brush or cloth to achieve desired shine. For the face and ear areas spray onto your hand or cloth and gently wipe around the area.

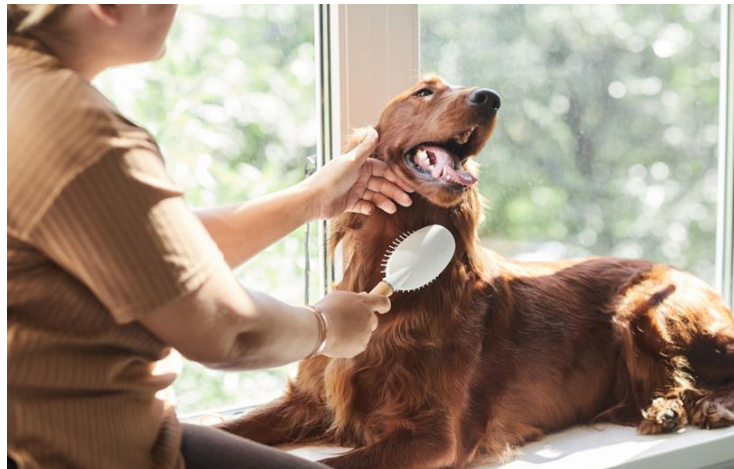

Tip:- For best results, use after washing.

Safety:- Always keep out of reach of children.

Use Only on Animals. Safety:- Always keep out of reach of children.

Animal Use Only. Unsuitable for felines (cats)

For extra health of your pet's skin and coat, use Paradise Nutrients Premium Pet Minerals for your pet's general wellbeing and overall health.
