www.HydeBoats.com

In the 1950's I started to fish the Salt River in Wyoming with my brothers and my father. My father had several bamboo fly rods with automatic reels. Those bamboo rods are how I learned to fish. The rods came with two tips so that if you broke one, you always had a spare. As you might expect from boys, we broke the tip several times so we just kept patching them by moving the tip lower and lower until we were soon fishing with a 6' fly rod instead of an 8' rod.

From that beginning I have had the opportunity to fish most of the rivers from North Alaska to Southern Chile. I have been asked many times which river I prefer and my answer is always the same, "My favorite is the river that I am on at the time." I have found that I really don't have a favorite, I like them all. I have fond memories of so many good experiences on many different rivers.

Fly-fishing has been the method of fishing in the Hyde family for 6 generations. It is still the preferred choice of fishing for most of us. My grandsons have taken up the sport and have become very accomplished with the fly rod and also rowing our drift boats. This is especially nice, so that their grandfather can get a little fishing in with them.

Drift boat manufacturing came naturally to me as I spent many of my early years building airplanes and learning about the dynamics of flight. I have been involved in the great outdoors all of my life and know personally how demanding the rivers of the world can be. My first and foremost goal is to build the strongest, safest, most maneuverable drift boats to ensure the safety of our customers. With my sons and grandsons, we now have three generations in the boat business. The staff at Hyde are committed to making your fly fishing experiences the most enjoyable, and we hope to see you on the great rivers of the world in a Hyde Drift Boat.

Please give us a call and see the difference our employees can make in helping your decision to purchase your next drift boat.

I hope to see you soon on the river.

LaMoyne Hyde

We are proud to introduce the latest models of premium drift boats designed for fishermen by fishermen. This year's line continues the tradition of excellence established by Hyde Drift Boats. The proven leader in innovation, Hyde focuses on delivering drift boats designed to meet the needs of today's anglers. Hyde uses the best design principles used by the pioneers of drift boat building, coupled with the latest technology to produce the ultimate drift boat line available.

Hyde Drift Boats are engineered to deliver unchallenged Performance. With their efficient parallel chine system, Hyde Drift Boats differentiate themselves by actually leveraging the current and creating a partnership between you and the water. Created from the finest materials and backed by our lifetime warranty, when you own a Hyde, Durability is guaranteed and your boat is always there when you need it. Hyde Drift Boats offer unmatched Adjustability by providing removable storage, seats, and leg braces. This allows fishermen to create a floor plan to meet each particular day's needs.

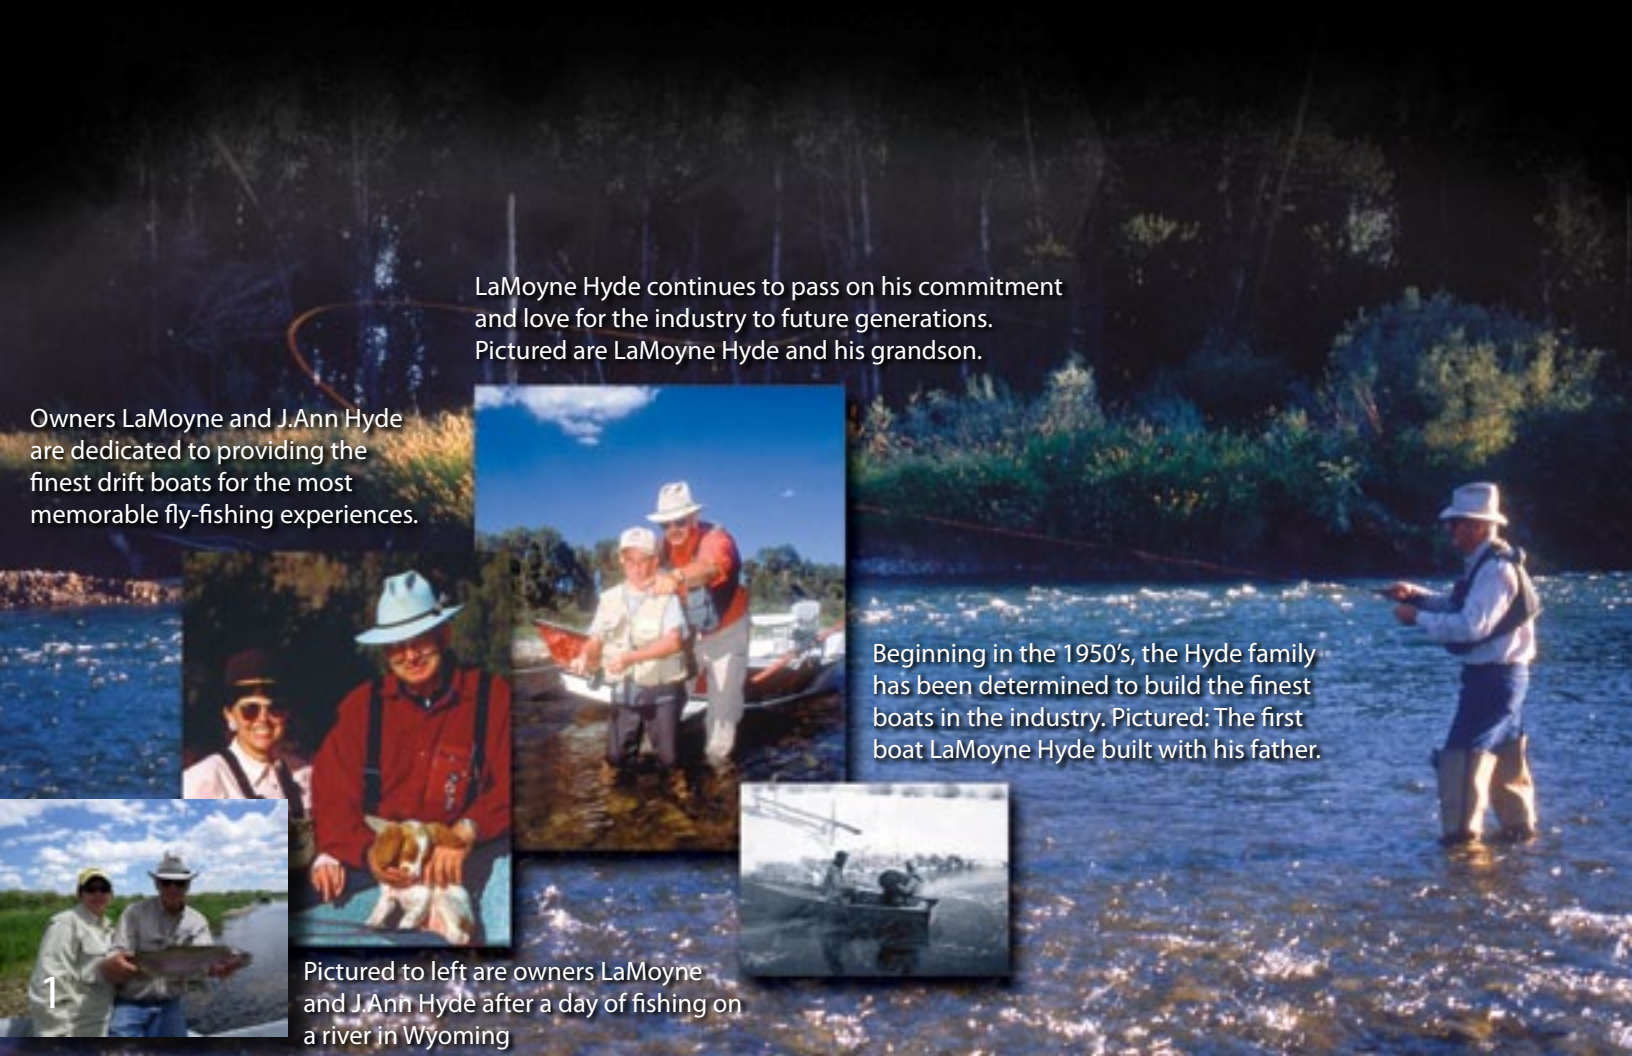

Throughout your day on the river, Comfort is critical and in a Hyde you'll find it. As you glide through the water and easily address the rising fish close to the banks, you'll be glad you did your homework when looking for a drift boat. At Hyde, our boats are designed and engineered to meet your every need, so that you can focus solely on what's really important—those you are with and the memories you are creating.

Having run technical water for many years, LaMoyne Hyde was looking for a great fly fishing boat. Seeing the need for such a boat, and using his relevant experience in manufacturing airplanes, LaMoyne he went to work designing the most hydrodynamic, easy to row drift boat on the market. Over the years boats have been built out of wood, fiberglass, and aluminum material but never in combination of all three. LaMoyne, being skilled in wood, fiberglass, and aluminum and seeing the advantages of fiberglass and alumunim, took the best of both worlds to build a hybrid combination boat.

No other drift boat offers more configurations due to our unique modular design. There are over 1000 accessory, seating and storage configurations available to meet the needs of any angler. Twenty five cubic feet of storage is available in a Hyde Drift Boat, nearly double the industry standard.

We invite you to explore the difference a Hyde can make.

Over 500,000 professional guide miles will be traveled in Hyde Drift Boats this year. We've carefully selected our pro staff advisory team to evaluate our boats each year and rate them on quality, performance, durability and comfort. From this feedback as well as our customers, we make enhancements to meet the needs of anglers throughout the world. (You're welcome to contact one of these professionals by visiting our website HydeOutdoors.com.)

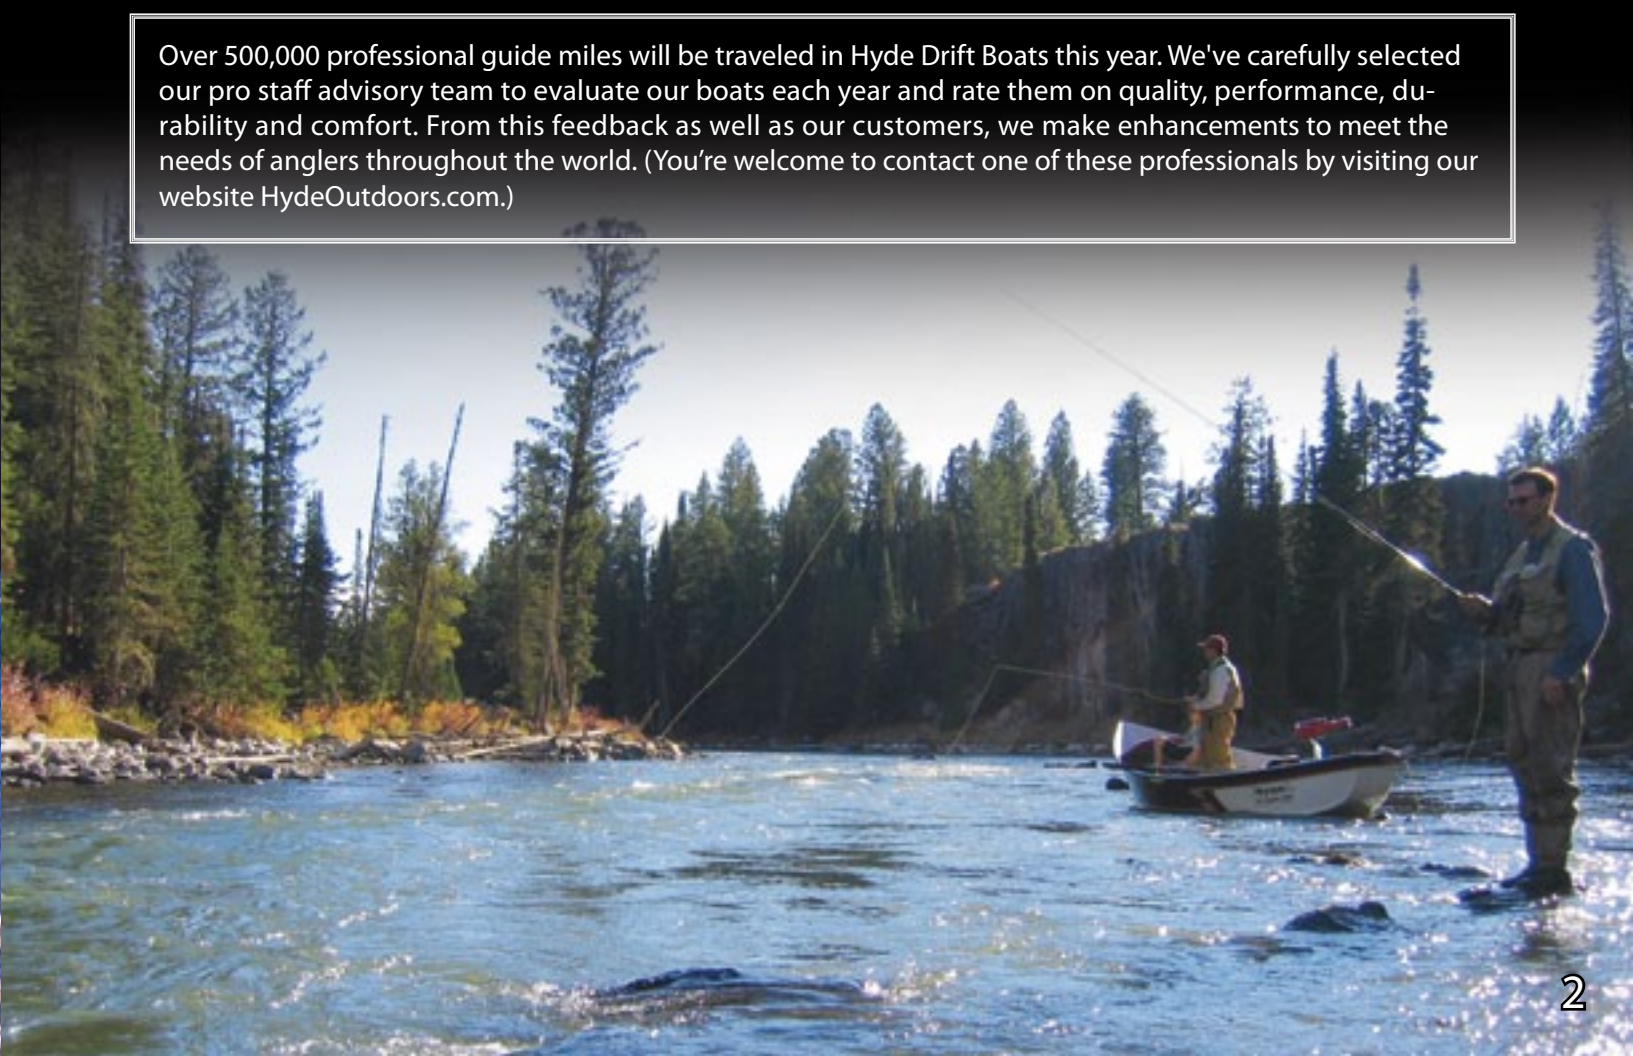

LaMoyne Hyde continues to pass on his commitment and love for the industry to future generations. Pictured are LaMoyne Hyde and his grandson.

Owners LaMoyne and J. Ann Hyde are dedicated to providing the finest drift boats for the most memorable fly-fishing experiences.

Beginning in the 1950's, the Hyde family has been determined to build the finest boats in the industry. Pictured: The first boat LaMoyne Hyde built with his father.

Pictured to left are owners LaMoyne and J. Ann Hyde after a day of fishing on a river in Wyoming

The Limited Edition is the most innovative drift boat design available. This exclusive boat is designed specifically with the angler in mind and is limited in its production. Unlike any other boat available on the market, the LH Limited Edition offers side storage throughout the boat providing a walk through interior. The full walk-through interior, of this unique boat, allows the angler and rower to maneuver throughout the boat without ever stepping over a bench or storage box. From its incorporated fly boxes to the G4 bottom, every detail in this boat has been designed for the fly fisherman. Ideal for the most demanding river conditions, G4 technology has revolutionized the amount of abuse a drift boat can withstand. "Over two years of R & D have gone into this product, we knew how tough it was from the abuse we inflicted upon it before we released it to the public. But nothing could have prepared us for the tremendous response and success stories that we've received on just how durable and slick the G4 really is," says Jim Kunz, CEO - Hyde Drift Boats.

After nearly 10 years of use on Hyde Drift Boats the G4 is still going strong. Featuring the Hyde Lifetime Warranty, with the introduction of the LH Limited Edition Series, Hyde is once again raising the bar in drift boat design.

Standard Features

- Custom Colors (Interior & Exterior)
- Front and Rear Level Floors
- Front Casting Deck
- Bow Shelf
- Foot Brace
- Full Length Rod Storage

Side Height	19.5"

Available in HSC (High Side Combination), LPC (Low Profile Combination), HSA (High Side Aluminum), and LPA (Low Profile Aluminum) Models. You can see more information about Aluminum boats on page 11.

"After twenty years of guiding I have rowed many different types of drift boats. Whether we are filming fishing shows or teaching new guides, my Hyde boat is awesome. It spins on a dime and glides through the afternoon winds with ease. My boat works with me not against me. I can pull the boat into an eddy or transverse through a boulder field. I strongly recommend a Hyde Drift Boat for personal or professional needs..."

Brent Curtice
Colorado

Model shown may not reflect exact configurations.

You've been asking for it and now we've done it. Our newest boat is an 18' high side design built to handle the big waters of the Northwest U.S and Canada while giving you plenty of room for fisherman and gear.

This boat is also available in a high low design that allows easy entry into the boat while the traditional bow allows you to comfortably run large western rivers. This boat also floats much higher and performs amazingly well due to the increased size of the flat footprint on the water.

The new XL Low Profile has been a great hit to the Hyde Boat line-up. With a centerline of 16' this boat has 50% more front and rear level floor space than any other manufacturer, and nearly twice the storage space! Its low sides allow easy entry into the boat and also allow it to maneuver much easier in windy conditions. The increased footprint allows the boat to be stable and run in extremely shallow water while maintaining the performance for which Hyde Boats are known.

As with all Hyde boats, this model is totally modular and can be configured to meet any situation. All Hyde Boats feature a lifetime warranty.

Specifications	
Centerline	16'
Gunwales	17' 6"
Beam	76"
Bottom Width	56.5"
Side Height	23.5"

The Northwest model is designed specifically for the waters of the Northwest. With an eighty-two inch beam and nearly six inch higher sides, this boat can comfortably accommodate multiple anglers and large loads. The increased side height also allows the rower to easily maneuver through big water while staying dry.

The Northwest Edition handled big water with ease during extensive product testing. Our Pro Staff members also agree that this boat performs amazingly well.

Specifications

Handcrafted using the highest quality materials, the Contender series is a quality drift boat for an affordable price. The best value in its class, the all fiberglass design includes recessed rod storage, oars, trailer, casting braces and storage throughout. An unbelievable value.

Specifications	
Centerline	15' 8.5"
Gunwales	17' 3"
Beam	85"
Bottom Width	56"
Side Height	23"

Model shown may not reflect exact configurations. Please refer to chart for standard configurations.

ROCKY MOUNTAIN SKIFF

The Rocky Mountain Skiff is newly designed and ideal in windy conditions, and makes it easy to row to those hard to reach places. Hyde's Skiff is a truly excellent tail water boat. The skiff comfortably accommodates three people while displacing a minimal amount of water. The increased foot print allows the boat to be very stable, and run in extremely shallow water.

As with all Hyde boats, the Hyde Rocky Mountain Skiff is totally modular and can be configured to meet any situation.

Standard Features

- Recessed Rod Holders
- Raised Level Floors
- Front Casting Deck
- Rowers Foot Brace
- Drain Plugs
- Traction Enhanced Floor

Optional Equipment

- Front and Rear Storage Boxes
- Rowers Storage Box
- Leg Braces

- Trailer Anchor Nest
- Trailer Upgrade
- Anchor and Anchor System
- Custom Colors
- Oar Upgrades

Specifications	
Centerline	15' 6"
Gunwales	16"
Beam	70"
Bottom Width	55"
Side Height	18.5"

SPORTSMAN'S DRIFTER

The Sportsman's Drifter is designed to meet the needs of anglers looking for a lightweight and stable solution to get to those hard to reach places. Designed for smaller waters, the Drifter is extremely maneuverable and easy to row. Due to the newly designed fly deck, anglers can fish comfortably while standing in the front leg brace.

Two people can easily load the Sportsman's Drifter into a pickup truck. While extremely lightweight, the Drifter offers many of the advantages of a full size drift boat. It's an ideal boat for hunting and fishing where access is limited. The Drifter is constructed with the same attention to detail for which Hyde is known.

Standard Features

- Front Casting Deck
- Rower Bench
- Drain Plugs
- Hyde Lifetime Warranty

Optional Equipment

- Front Bench with Tempress Seat & Cushion
- Low Back Seat
- Anchor & Rope
- High Back Rowers Seat
- Side Anchor System

The Ultimate Do-All Fishing Machine

You can power it up or down river, drift it, row it, you name it! Customize it the way you want with leg braces, seating, storage compartments, and the size of your motor. The Power Drifter only drafts three inches on plane so you can get into those “tough to fish” areas where other boats can’t go. When there is only a limited time to fish, the Power Drifter also helps you get on and off the river in the time you choose.

Specifications	
Centerline	18’ 1.5”

Excellent Storage Capacity

Virtually any configuration can be made to meet your needs! Like all top of the line Hyde Drift Boats, the Power Drifter is a completely modular boat. Being modular allows you to change your boats configuration around at any time.

Tunnel Hull

With over 150 configurations, Hyde Boats can always be tailored to meet your needs.

The preferred material for many northwest fisherman, Hyde Aluminum Drift Boats offer unmatched adjustability, durability and comfort. With features such as level floors, custom colors, UHMW bottom and a lifetime warranty, Hyde Aluminum Drift Boats are quickly becoming the top choice among guides throughout the northwest. As with all Hyde Drift Boats, our aluminum models are hand-crafted from the finest material providing unparalleled beauty and performance. Hyde Aluminum Drift Boats are tested tough in order to meet the demands of rugged coastal rivers.

Available in Signature Series and Pro Series HSA (High Side Aluminum), and LPA (Low Profile Aluminum) Models.

Wheel Size	13"
Trailer Weight	430 lbs.

We're often asked about color selection. A dark large stripe with a lighter small stripe typically provides the best color combination. When selecting a bow color, we recommend choosing a small stripe that is distinctively different than the bow color in order to achieve a great custom look. Below are just a few examples of the hundreds of color combinations available from by Hyde Drift Boats.

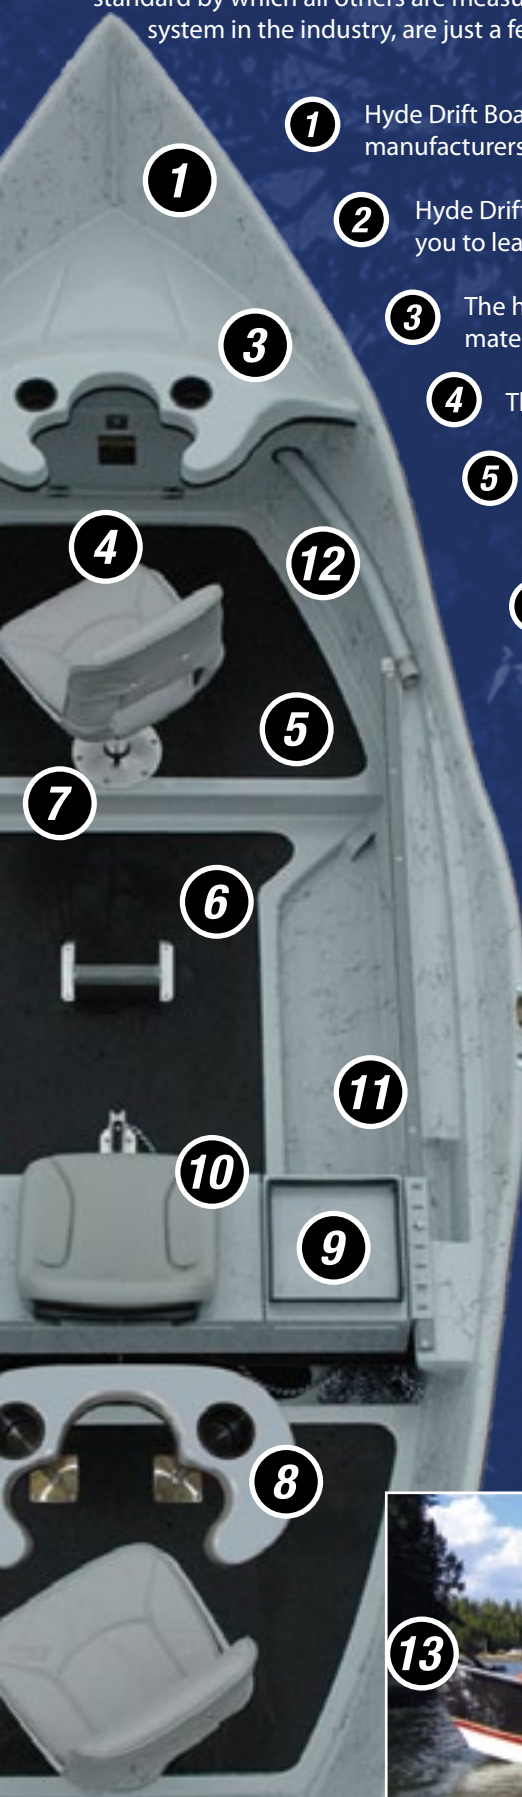

Bow Color
Small Stripe
Large Stripe
Bottom Color

DID YOU KNOW?

Hyde Drift Boats offer unmatched Adjustability and Comfort. The innovative Aluminum Rail System (ARS) has become a standard by which all others are measured. Removable storage boxes and knee braces, along with the most advanced floor system in the industry, are just a few of the distinct advantages offered by Hyde Drift Boats.

- 1 Hyde Drift Boats uses high quality Isophthalic resin rather than inexpensive Ortho resins often used by other manufacturers.
- 2 Hyde Drift Boats uses an NPG additive in our gel coat to protect the hull from ultraviolet damage, allowing you to leave your boat in all elements without fading.
- 3 The hull is manufactured with the highest quality hand laid fiberglass mats and woven materials, providing superior strength and a dramatic weight reduction.
- 4 The interior is carefully designed to provide a snag free surface.
- 5 Hyde Drift Boats incorporate a complete level floor system, which decreases leg fatigue and provides superior comfort. The floors, including the rowing platform, are raised providing a dry platform for all passengers.
- 6 Hyde incorporates aluminum and Nida-Core in their level floors in order to increase longevity and maximize strength.
- 7 Whether pulling plugs on the west coast or casting dry flies on the Henry's Fork, Hyde Drift Boats are totally modular in design. All boats can be easily customized to meet the demands of nearly any fishing conditions. Hyde Drift Boats provide unmatched adjustability and comfort.
- 8 Removable Leg Brace provides comfort and security while casting. As with most Hyde Drift Boat Accessories, the knee brace can be easily removed when increased storage space is necessary.
- 9 Most accessories, including the storage boxes, are handcrafted at the Hyde Drift Boat manufacturing facility - ensuring the highest quality workmanship.
- 10 Storage Boxes are constructed of lightweight marine grade aluminum. Not only does this provide a reduction in weight, it also maximizes strength. Lockable steel latches protect your valuable gear.
- 11 The Aluminum Rail System (ARS) provides a secure connection for the lightweight aluminum storage boxes. With seven positions available, the storage boxes can be easily adjusted to provide equal weight distribution.
- 12 Reverse Recessed Rod Storage provides a convenient way to protect your rods. The removable liners prevent scratches and the reverse design allows easy access for both anglers.

- 13 The flat footprint design and rigid bottom create lift, reduce drag and minimize bottom turbulence. Parallel chines provide the ultimate tracking and maneuverability resulting in the best performing drift boat available.

WHY CHOOSE HYDE?

The production process is controlled from the beginning to the end at Hyde Drift Boats, ensuring the ultimate in design, value and service.

We Research It

Extensive research goes into every boat, trailer and accessory manufactured by Hyde to ensure the highest quality performance and durability. Hyde continues to be the leader in innovation, quality, comfort, performance, design, value and service in the drift boat industry.

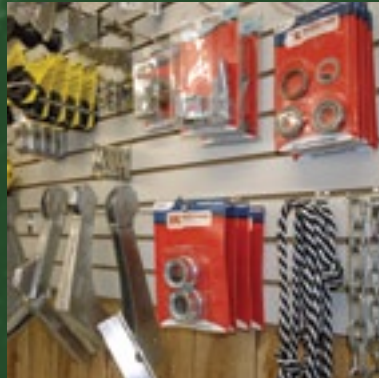

We Test It

At Hyde we have over 200 professional guides who test our products in the field and give us feed back on their performance. Tested in some of the roughest of river situations around the world, our boats are proven tough. Our trailers are also tested on the many highways and back roads of the country to meet the most demanding needs of our customers.

We also have had many engineers at different colleges test the hydrodynamics of our boats, ensuring the greatest performance in areas such as tracking, holding in fast water, and safety in various river conditions. We also test our designs to ensure we deliver the best interior comfort possible.

We Source It

We require our suppliers to provide us with the strongest and most advanced materials, product knowledge, and training available, to ensure the highest possible quality in the manufacture of our drift boats and trailers.

We Produce It

At our state of the art factory, we manufacture our products on-site to ensure only the highest quality. We do not rely on other manufacturer's quality control or lack thereof in our production. We are continually researching new products to add to the quality of our boats and to ensure our customers benefit from the latest in technology; and because we produce it, we can quickly implement these innovations into our latest models.

We Package It and Ship It

We currently have a fleet of trucks that deliver all over the United States and Canada. Our professional drivers ensure that all of our boats, trailers and accessories arrive at their destination in factory new condition.

We Guarantee It

Since we research it, we test it, we source it, we produce it, we package it and we ship it, it is easy for us to offer the best lifetime guarantee in the drift boat business. When you buy from Hyde, you have no other manufacturer to deal with or worry about.

We ship factory direct so our professional staff can answer your questions and help you make decisions regarding your boat purchase.

#1 choice of professional guides that demand performance and quality from their boats.

Idaho Falls, Idaho Location

Our corporate office and manufacturing plant are located in beautiful Idaho Falls, just minutes away from the Snake River.

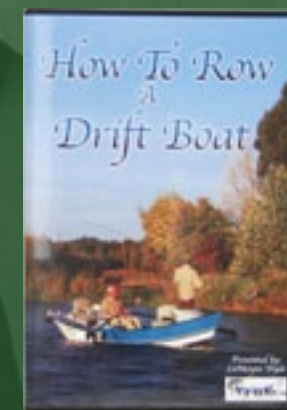

Repairs

At Hyde Manufacturing Facility we can repair all makes and models of drift boats and trailers. We can also customize your drift boat by adding Hyde Boat innovations to them. This could include installing accessories such as motor mounts, trailer anchor nests, and easy pull anchor system, or many other types of upgrades are available.

Picking up Your Boat?

Hyde Drift Boats is located in beautiful Idaho Falls, just minutes away from some of the finest fishing the West has to offer. Our full service fly shop has the largest fly selections in the area and everything you need for your fishing adventure including the world's largest selection of drift boat accessories. We can recommend a float trip, provide you with the hot flies and even arrange a shuttle while you enjoy floating the South Fork, Henry's Fork or any other river.

How to Row a Drift Boat

For those who are new to rowing a drift boat or are looking to broaden their skill set, LaMoyne Hyde has produced an exclusive instructional film titled "How to Row a Drift Boat." This film is over an hour long and filled with hundreds of lessons including various oar strokes, safety tips, dealing with rock beds and much more. It is the most complete instructional rowing video ever produced. Available for purchase online at ShopHyde.com
