

Jigsaw Cut Design Requirements

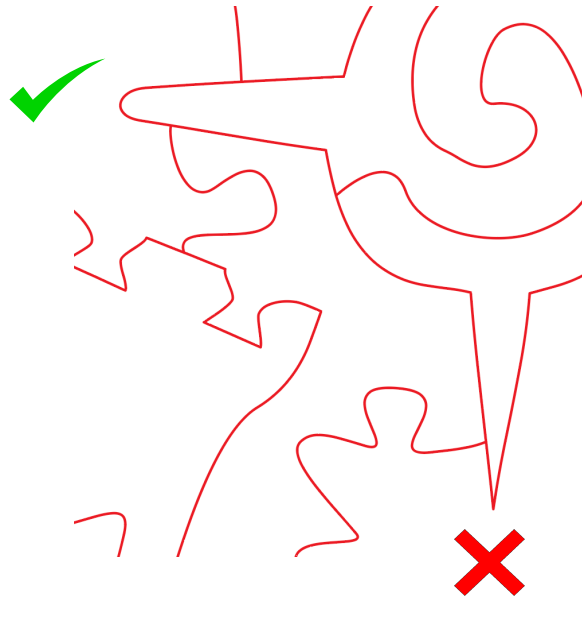

1. Border should be **black**. Cuts should be **red**. Line thickness must be 0.1mm.

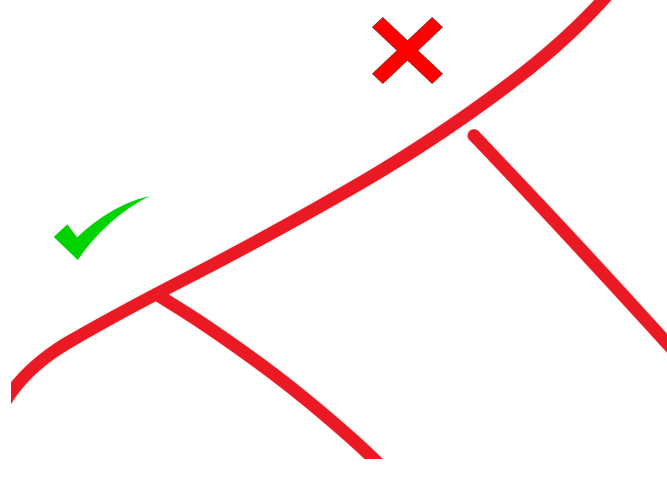

2. All border pieces must lock together. Most internal pieces should also lock together in at least 2 places.

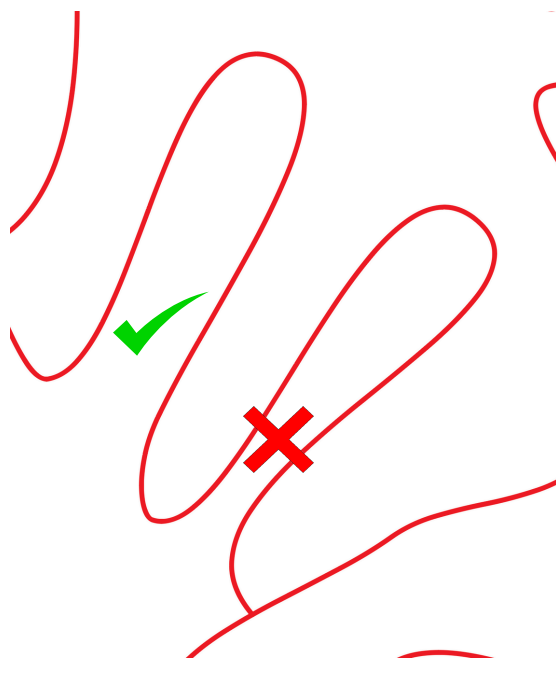

3. No sharp points. They must be rounded to prevent issues when laser cutting.

4. No gaps between line ends. This is to prevent the pieces sticking together on the laser cutter.

5. Avoid thin pieces less than 3mm, to prevent snapping

6. At least 2.5mm bleed should be left around the edges due to slight variances when laser cutting.

7. General Guidance:

- Themed pieces can be made up of multiple parts.
- Themed pieces must match the theme of the artwork
- Themed pieces can be in any orientation.
- The more pieces that lock together, the better.
- Please do not adjust the template sizes.
- Image and Cut should be in separate layers
- All lines should be 0.1mm thick

We will be happy to offer advice at any point during your design process and if required will make minor changes once the design as been submitted.
