

Layered Christmas Tree Groovi Plate

Needle tool pattern

There are many ways to use your Christmas Tree Groovi plate.

One Layer Tree

You can make a single layer card using the pre-cut tree shaped card as a base. Then emboss the tree as it appears on the plate. Choose ordinary parchment paper or one of the many beautiful coloured Groovi parchment papers available. Stick your tree onto the folded card base using tiny dabs of Perga glue hidden behind the white embossed areas. Alternatively you can stick the Perga Crystals on top to hide your dabs of glue. The Perga Crystals are a great alternative to brads.

Six Layer Tree

If you want a more spectacular tree you can emboss it in six layers. These will all fit onto an A4 piece of parchment. I have indicated the layers on the diagram to help you with this. You can picot cut out around the layers or you can use ordinary scissors. You can also use a combination of both, only picot cutting the areas that are visible. Give your tree as many layers as you wish and choose a different topper and decorations for a different look.

Needle Tool Tree

Emboss the tree outline only on the Groovi plate. Remove from the plate and secure face down onto this pattern, lining up the outlines of the tree. Using the needle tools indicated, perforate shallow through the parchment and the pattern. Emboss the shapes within and then perforate deep using a 1-needle tool.
