CIPS (COVERT IN PLAIN SIGHT) KIT

The CIPS™ (Covert in Plain Sight) Kit is designed to provide plainclothes officers a solution to remain covert when communication via a tactical radio is required. Currently, officers use the popular coiled acoustic tubes which can be concealed but, once noticed, immediately expose the officer. The CIPS Kit allows officers to use a tactical radio while wearing earbuds commonly associated with smartphones or MP3 players, so the officer blends in seamlessly when out in public. The tactical radio is connected to a mini PTT (Push-to-Talk) Sniper Ring, so the officer is able to key the radio and use the microphone in the smartphone headset without any indication to outsiders that a tactical radio is in use.

FEATURES

- Kit comes complete with earbuds with volume control and microphone, radio adapter and micro Push-to-Talk (PTT)
- Cable lengths optimized for threading through suits and plainclothes
- Quick detach system to transition to personal electronics
- Available for Motorola XTS and APX radios; other radios available upon request
- Lightweight (less than 2 oz.)
- Cost-effective compared to in-ear transmitters
- PTT (Push-to-Talk) available in Beige (exclusive to TCI) and Black
