Everyone at Rad Power Bikes cares about your safety and the safety of those around you. We want you to thoroughly enjoy your amazing ebike safely and reliably for many years to come.

**WARNING:** DO NOT alter or modify anything in your ebike’s electrical system, battery, digital controls, physical components, or drive train. Doing so will void your warranty. Any such modifications may result in damage to your bike, other property, or injury or death to you or others.

**WARNING:** This ebike is not to be operated by anyone under the age of 16. Children under the age of 16 may lack the necessary judgment and skill to safely operate the ebike, potentially resulting in damage to the bike, damage to other property, serious injury, and/or death. Please also check your local laws, which may require a higher age.

Please read, understand, and follow all safety notices, cautions, and warnings in this manual and for any accessories or attachments you add to make your ebike perfect for you.

Stay safe! Ride Rad!

---

**Welcome to the Radventure!**

Thank you for purchasing the RadRunner™ 2 from Rad Power Bikes™!

We take pride in bringing you a quality product that will offer years of enjoyment. Please read and understand this manual fully before assembling and riding your bike; the latest version of your manual is available at [www.radpowerbikes.ca/manual](http://www.radpowerbikes.ca/manual). And be sure to watch the official RadRunner assembly video available at [www.radpowerbikes.ca/assemble](http://www.radpowerbikes.ca/assemble) or at the QR code shown here.

Additional information about your RadRunner can be found in our Help Centre at [www.radpowerbikes.ca/help](http://www.radpowerbikes.ca/help).

Be sure to check all hardware for correct torque (see "Tools and recommended torque values" on page 9) during assembly. Before each ride, follow the recommendations in the "Safety checklists" on page 24. Finally, take care of your new RadRunner by following the guidelines in "Recommended service intervals" on page 26. If you’re not sure you have the skills, experience, and special tools required for assembly and maintenance, get help from a local, certified, and reputable bike mechanic.

**WE ARE HERE TO HELP!** If you have questions after reading this manual and watching the assembly video, please consult the Rad Power Bikes Help Center, contact us by email, and/or give us a call on the phone. Thanks for riding Rad!

**Rad Power Bikes Help Centre:** [www.radpowerbikes.ca/help](http://www.radpowerbikes.ca/help)

**Help request form:** [www.radpowerbikes.com/support](http://www.radpowerbikes.com/support) (typically faster than email)

**E-mail:** can-support@radpowerbikes.com

**Phone:** 1-877-299-9404

Using this manual

This manual contains critical details about how to safely operate and maintain your RadRunner. Read it carefully and familiarize yourself with your ebike before riding it. Pay special attention to the safety messages shown here.

**NOTICE:** A “notice” is important information that can help you avoid bike/property damage or extend the life of parts and the bike.

**CAUTION:** A “caution” statement indicates a hazardous situation that, if not avoided, could result in minor or moderate injury or property damage.

**WARNING:** A “warning” statement indicates a hazardous situation that, if not avoided, could result in death, serious injury, or property damage.

**DANGER:** A “danger” statement indicates a hazardous situation that, if not avoided, has a very high risk of death, serious injury, or property damage.

Riding any bike or other vehicle always involves some risk of serious injury or death. Your safety depends on many factors including your bike knowledge, your bike’s maintenance, foreseeable riding conditions, etc. There are also factors we cannot control or anticipate in every situation or condition while riding. This manual makes no representations about the safe use of bikes under all conditions. If you have any questions you should contact Rad Power Bikes immediately.

Assembly and first adjustment of your bike from Rad Power Bikes requires special tools and skills. We recommend that you have this done by a certified, reputable bike mechanic. Keep this manual and any other documents that came with your RadRunner. All content in this manual is subject to change or withdrawal without notice. Visit [www.radpowerbikes.ca/manual](http://www.radpowerbikes.ca/manual) to view and download the latest version. Rad Power Bikes makes every effort to ensure the accuracy of its documentation and assumes no responsibility or liability if any errors or inaccuracies appear within.

Assembly instructions for the RadRunner

The following steps provide an overview of how to assemble your RadRunner 2 from Rad Power Bikes. They are not a complete or comprehensive manual of all aspects of assembly, maintenance, and repair, which involve specialized tools and skills. We recommend you consult a certified, reputable bike mechanic to assist in the assembly, repair, and maintenance of your RadRunner.

Please note that your RadRunner may include components that look different from those in the illustrations above and elsewhere in this manual. Such changes help ensure uninterrupted shipping. Our engineers rigorously test each component to guarantee quality and compatibility.

**WARNING:** Incorrect assembly, maintenance, or use of your ebike can cause component or performance failure, loss of control, serious injury, or death. Even if you're an experienced bike rider, you must read and understand the entire manual and any documentation provided for subcomponents or accessories before riding. If you are not sure you have the experience, skills, and tools to correctly perform all assembly steps in the manual and the assembly video at [www.radpowerbikes.ca/assemble](http://www.radpowerbikes.ca/assemble), consult a local, certified, reputable bike mechanic.
1. **Unpack the bike.** Open the bike box and, with the help of another person capable of safely lifting a heavy object, remove the ebike from the bike box, placing it upright on the back wheel and front fork protector plate. Carefully remove the packaging material protecting the bike frame and components, and keep the packaging materials in case you want to ship the bike. Otherwise, recycle these materials, especially cardboard and foam, wherever possible. Remove the small box from the bottom of the bike box and carefully set out the contents. **Ensure all of the following pieces are included with the ebike:**

   - Front wheel
   - Headlight
   - Pedals (left and right)
   - Front wheel quick release (in fork protector plate)
   - Assembly toolkit
   - Keys
   - Stem faceplate and mounting hardware
   - Charger
   - Manual(s)

   **If anything is missing, please contact Rad Power Bikes.**

   We also recommend the following (not included) for assembly and maintenance:

   - Flat-side cutters
   - 15 mm pedal wrench
   - Bicycle grease
   - Clean shop towel or paper towel for cleaning excess grease
   - Bike pump with Schrader valve and pressure gauge
   - Torque wrench (3-60 Nm) with Allen bits
   - A strong friend

2. **Install the handlebar** following the steps below. For more information, view the assembly video available at [www.radpowerbikes.ca/assemble](http://www.radpowerbikes.ca/assemble).

   a. **Locate the handlebar stem faceplate and hardware.** Set the bolts and faceplate aside near the handlebar.

   b. **Orient the handlebar properly.** The brake levers should face forwards and the throttle should be on the right side. Trace the brake housing from the left brake lever to the brake caliper and make sure the bundle of cables is not twisted.

   c. **Centre the handlebar on the stem.** Place the handlebar into position on the stem so it’s centred and so that the handlebar is approximately parallel with the front fork when viewed from the side (see illustration).

   d. **Install the stem faceplate.** Place the stem faceplate over the handlebar, and thread in the four bolts by hand. Then use an Allen wrench to tighten the bolts evenly, by moving in an “X” pattern. Ensure the gap between the faceplate and stem is even.

   e. **Torque the bolts evenly** to the value listed in “Tools and recommended torque values” on page 9. If, in the future, you decide to adjust the angle of the handlebar (e.g., to bring it slightly closer to the seat), be sure to follow the same procedures listed here to ensure the handlebar is properly secured.

3. **Install the front wheel onto the front fork** as explained below. For more information, see the assembly video at [www.radpowerbikes.ca/assemble](http://www.radpowerbikes.ca/assemble).
**WARNING:** Do not touch the brake rotor, which has sharp edges and can cause serious injury. Touching the brake rotor or brake pads with bare skin can also transfer natural oils to either component, which can decrease braking performance. When installing the front wheel, ensure that you don’t touch the brake rotor or pads with bare hands. Wear clean gloves if needed.

a. **Locate and remove the quick-release skewer from the front fork protector plate.** Open the lever, remove the thumbnut and cone spring on the opposite side, and remove the skewer. Keep the washer and the other cone spring in place on the lever side.

b. **Lightly grease the quick-release skewer.** Place about half of a pea-size amount of bicycle grease onto the threaded end of the skewer and then wipe it across the rest of the skewer.

c. **Install the skewer through the front wheel hub, starting from the brake-rotor side.** Make sure to not touch the brake rotor. Reinstall the cone spring on the skewer. Ensure both cone springs point inward. Keep the lever open and thread on the thumbnut a couple of turns, leaving enough room for the fork dropouts.

d. **Carefully lift the front of the bike and lower the fork onto the wheel** so that the brake rotor enters the caliper, between the brake pads, and the axle enters the fork dropouts fully. If installing the front wheel is difficult, use a 5 mm Allen wrench to turn the inner pad adjustment dial counterclockwise one or two clicks to increase the space between the brake pads. Try to install the wheel again.

e. **Check that the wheel is fully seated in the dropouts,** that the wheel axle is level and parallel to the ground, and that the wheel is centred.

f. **Hold the quick-release lever in line with the axle and tighten the thumbnut** until the lever can stay parallel to the floor without being held. Use the palm of your hand to close the lever fully, without touching the brake rotor. The quick-release lever secures the front wheel to the bike, so it's important that the thumbnut is tight enough that the closed lever has adequate clamping force to keep the axle and wheel firmly in place. When you close the lever, there should be enough resistance that it leaves an imprint in your hand.

g. **Prop the bike on the kickstand.**

h. **Check the security of the front wheel and quick-release lever.** If it's too easy or too difficult to close, adjust the lever tension by turning the thumbnut one turn, then close the lever. Check the front wheel security on a regular basis: the front wheel should always be fully seated in the dropouts of the front fork, and the quick-release lever should always be properly secured.

4. **Check the security of the rear wheel.** The rear wheel security and hardware torque should also be checked on a regular basis (see “Tools and recommended torque values” on page 9). Either wheel can become loose or unsecured with normal use.

   **WARNING:** An improperly secured front or rear wheel can cause loss of control, accidents, serious injury, or death. Check that both wheels are properly secured during assembly and before each ride.

5. **Perform a handlebar twist test** to ensure the front wheel and handlebar stem are securely connected. Instructions for doing so are in “Handlebar twist test” on page 29.

6. **Install the headlight.**

   a. **Locate the headlight mounting hardware** on the top of the front fork. Remove it and set it aside for the next step.

   b. **Install the headlight bracket.** Pass a washer over the headlight mounting bolt end, pass the bolt through the headlight mounting bracket, and then pass the bolt through the mounting point on the fork. On the other side of the fork, pass another washer over the bolt end, and then thread the locknut on by hand.
7. **Plug in the headlight connector.** Line up the internal notch and pins with the external arrows, and press directly together without twisting.

8. **Adjust the headlight angle slightly downward** so it won’t blind oncoming traffic. Using the tools listed in “Tools and recommended torque values” on page 9, loosen the angle adjustment bolt and locknut, angle the headlight downward, and tighten securely. Do not overtighten.

9. **Install the pedals.**
   a. **Locate the right-side pedal,** which is marked “R,” should have an “R” sticker attached, and has a smooth pedal axle. The right pedal goes on the crank on the drivetrain side of the bike, which has the chain and is the same as a rider’s right side when seated on the bike.
   b. **Place a pea-size or slightly smaller amount of bicycle grease onto the threads of the right pedal.**
   c. **Carefully thread the right pedal onto the right crank by turning clockwise** (toward the front of the bike). Do so slowly and gently by hand. Do not cross thread or damage the threads. See the “Right pedal installation” illustrations.
   d. **Place a pea-size or slightly smaller amount of bicycle grease onto the threads of the left pedal.**
   e. **Carefully thread the left pedal onto the left crank by turning counterclockwise** (toward the front of the bike). The reverse-threaded left pedal is marked with an “L,” should have an “L” sticker attached, and has notches on the pedal axle. Thread slowly and gently by hand without cross-threading or damaging the threads. See the “Left pedal installation” illustrations.
   f. **Tighten each pedal using a pedal wrench** to avoid damage caused by wider wrenches, as shown in the assembly video at www.radpowerbikes.ca/assemble.
   g. **Torque each pedal to 35 Nm.**
   h. **Wipe off any excess bicycle grease.**
10. **Inflate tires.** Check that the tire beads and tires are evenly seated around the rims. Use a pump with a Schrader valve and pressure gauge to inflate each tire to the recommended PSI (pounds per square inch) indicated on the tire sidewall. Do not overinflate or underinflate tires. For more information, see “Tire and wheel care” on page 28.

11. **Check the chain alignment.** Stand at the right side of the bike and grab the right pedal. Rotate the right pedal and crank toward the back of the bike as though pedaling backwards—this will run the chain through the drivetrain without spinning the wheels. Watch the chain and ensure the chain runs through the drivetrain (the rear cog, chain tensioner, and around the front chainring) smoothly. If the chain doesn't run smoothly or something seems misaligned, please contact Rad Power Bikes Product Support.

12. **Check the bashguard position.** The bashguard that helps protect your chain tensioner from impact damage must be positioned so that it does not touch or interfere with the operation of the chain tensioner. If the bashguard is too close to the bike, do the following:
   a. Ensure that the axle nuts are torqued to the value listed in “Tools and recommended torque values” on the next page.
   b. Gently pull the bashguard away from the bike, by hand, so that the chain tensioner can operate correctly.

13. **Finish the assembly.** Complete all steps in “Adjusting for comfort and safety” on the next page, including checking that all hardware has been tightened according to the values in “Tools and recommended torque values” on the next page. Before your first ride, be sure to perform the safety checks in “Maintenance” on page 23 including the handlebar twist test in “Handlebar twist test” on page 29.
Tools and recommended torque values

The tool sizing listed below is a general guide, but it is possible that the head of a particular bolt on your bike may vary, requiring a different tool (e.g., a 4 mm Allen wrench instead of a 5 mm Allen wrench). If so, use whatever tool fits the bolt head. Such differences will not affect the recommended torque for that piece of hardware. If you are installing accessories from Rad Power Bikes, any necessary instructions, important safety information, and torque specifications will come with your accessory and/or be available online at www.radpowerbikes.ca/help.

Adjusting for comfort and safety

The following steps are critical for your comfort and safety, and must be performed before your first bike ride. We recommend that you consult a bike fitting professional such as a certified, reputable bike mechanic who specializes in bike fit.
Adjusting the seat height

An ideal seat height for most riders allows them to be comfortable and get the best pedalling efficiency. When the rider is seated, they should be able to place the ball of their foot on the pedal at its lowest position while their leg is almost fully extended, with the knee slightly bent. The seat should never be so high that the rider must rock side to side or fully straighten their legs while pedalling. And the seat must never be pulled out so far that the minimum insertion point is above the seat tube (see illustration).

Depending on a rider’s preference, ability, and amount of experience with bike and ebike riding, lowering the seat so the rider can put one or both feet on the ground without dismounting from the seat may offer a safer and more comfortable experience while operating the bike.

1. Open the quick-release lever.
2. Slide the seatpost in or out of the seat tube to a height appropriate for your leg length and preference. Do not extend the seatpost beyond the minimum insertion marking etched onto the seatpost (see the “Seatpost out TOO FAR” illustration).
3. Align the quick release clamp opening with the notch in the seat tube, and close the quick-release lever fully. Closing the lever should require enough pressure that it leaves an imprint in your hand. When closed, the seat should not move up, down, left, or right. If needed, adjust the lever tension by turning the adjustment nut opposite the quick-release lever.
4. Try out your seat fit, and repeat steps 1–3 if the seat position needs a bit more adjusting.

DANGER: Overextending the seatpost can cause it to break or fall off your bike, which will put you at very high risk of serious injury or death. Avoid this danger by inserting your seatpost into the seat tube far enough that the minimum insertion point is no longer visible.

Adjusting the handlebar angle

Most riders will feel comfortable with the handlebar angled so that it is roughly parallel with the front fork, as shown in the centre position in the illustration. Once you have adjusted the seat to your leg length and preference, you may decide that you would like the handlebar to be angled slightly closer to the seat. To change the angle, loosen the stem faceplate bolts just enough to allow the handlebar to pivot, and position it as you prefer. Re-tighten the stem faceplate using the method described in the assembly instructions.

Sit on the bike and test the positioning, making sure the handlebar can turn freely without touching your body. Be sure the gap between the faceplate and stem are even and torque all faceplate bolts according to the value listed in “Tools and recommended torque values” on the previous page.
Fine-tune the brake lever positioning

The angle of the brake levers can be adjusted for the most comfortable hand position possible. For most riders, this will allow them to rest two or three fingers comfortably on the brake lever while keeping their wrists in a neutral position. To adjust the angle, follow these steps:

1. **Loosen the brake lever clamp bolt** using the appropriate Allen wrench.
2. **Adjust the angle of the brake lever** so it's comfortable for the rider.
3. **Retighten the brake lever clamp bolt** according to the value listed in “Tools and recommended torque values” on page 9.

**TIP!** Another way to maximize hand comfort while riding is to ensure your handlebar grips are angled so that the wide section of the grip is positioned directly under the outside part of your palm while your wrists are in a neutral position and you have 2-3 fingers resting on the brake levers. This allows you to distribute your weight over a larger portion of your hand. You should be able to reposition the handlebar grips by applying firm pressure and twisting. If they don’t move, you can apply a small amount of rubbing alcohol between the grip and the handlebar as temporary lubrication: carefully insert a screwdriver between the handlebar tubing and the grip, pry the grip away from the handlebar slightly, then use a paper towel or squeeze bottle to apply the alcohol into the gap.

Fine-tune brake lever feel

The “feel” of the brake levers is controlled by the brake cable tension, which determines how far the brake levers need to be squeezed for the brake pads to press against the brake rotor. We recommend that the brake cable tension be such that squeezing the levers halfway between the starting position and the handlebar grip results in a firm lever feel, indicating that the brake pads are pressing against the brake rotor.

If needed, you can make fine adjustments to the brake cable tension by rotating the barrel adjusters at the brake lever housings and/or at the brake calipers.

For more information on brake lever feel and brake cable tension, please see the resources in our Help Centre at www.radpowerbikes.ca/help.

**DANGER:** A brake lever that can touch the handlebar grip when squeezed can result in the brake caliper not pressing the pads into the brake rotor fully or at all, which means that the brake will not function properly or at all. Not being able to brake the bike puts the rider at a high risk of serious injury or death. Always make sure that squeezing the brake lever does not cause it to touch the handlebar grip. Also make sure that a squeeze of the brake lever to halfway between the lever’s neutral position and the handlebar grip results in the brake caliper pressing the brake pads against the brake rotor.

Ensure all hardware is tightened properly

Ensure all hardware is tightened properly according to the values in “Tools and recommended torque values” on page 9. **This is a critical safety step that you must not skip.** If you do not own a torque wrench or you do not have the skills to check the tightness of your hardware, consult a local, certified, reputable bike mechanic for help. You can find more information about bike fit and making adjustments to your bike in our Help Centre at www.radpowerbikes.ca/help.
Battery information

The battery that comes with your RadRunner is a state-of-the-art, lithium-ion battery that's designed to give you years of power with proper care and use. Follow the recommendations here for the best possible performance.

- The battery should be fully recharged after each use. That way, you'll get the maximum range on your next ride and reduce the chance that you'll over-discharge the battery, which can reduce its lifespan. There is no memory effect on this type of battery, so charging after short rides will not cause damage.
- Charging the battery after a ride generally takes 3 to 7 hours (see “Estimated charging time” on page 14). In rare cases, charging may take longer to allow the battery management system to balance the battery, particularly when the bike is new, after long periods of storage, or if the battery has been completely depleted.
- Do NOT operate the bike with the key in the keyport, or injury to your leg or damage to the electrical system can occur.

[DANGER:] Never open the battery housing, which will void the warranty and can result in battery damage. It can also expose you to caustic substances and electrical shock or it could create a fire hazard, which can lead to serious injury or death.

[WARNING:] Using aftermarket battery accessories or products that have not been tested by Rad Power Bikes for safety and compatibility may void your warranty, create an unsafe riding condition, result in bike/property damage, or cause serious injury or death. If you use products not tested and recommended by Rad Power Bikes, you do so at your own risk.

[WARNING:] Never immerse or submerge the battery in water or liquid, including water in the battery mount, which can cause damage, serious injury, or death.

[WARNING:] Using a damaged battery or charger can create additional bike damage or a fire hazard. Stop using your battery and charger and contact Rad Power Bikes immediately if any of the following occur: (1) Your charger's flexible power cord or output cable or any of the electrical cables on your bike is frayed, has broken insulation, or any other signs of damage, (2) Your battery or charger is physically damaged, non-functional, or performing abnormally, (3) Your battery or charger experienced a significant impact from a fall, crash, or shipping damage, with or without obvious signs of damage, or (4) Your charger becomes too hot to touch (it's designed to get warm with normal use), makes an unusual smell, or shows other signs of overheating. Store any damaged battery or charger in a safe location and, as soon as possible, recycle or otherwise dispose of it according to local rules. Contact Rad Power Bikes Product Support if you have any questions or to purchase a compatible replacement battery or charger.

[CAUTION:] To reduce the risk of fire, connect only to a circuit provided with 10 amperes maximum branch circuit overcurrent protection in accordance with the National Electrical Code, ANSI/NFPA 70.

[NOTICE:] Always follow any safety information attached to the battery or charger. A sample label for the battery that shipped with your bike is shown at right, some details and manufacturing location may differ.

[NOTICE:] Failure to follow the battery-charging best practices outlined here and in the following sections could result in unnecessary wear to the charging components, battery, and/or charger, and could lead to an underperforming or non-functional battery. Batteries damaged due to improper care will not be replaced under warranty.
Removing and installing the battery

You can charge your battery either when it's on or off your bike. If you choose to remove it for charging, storage, transportation, security, or some other reason, keep the following best practices in mind to prevent battery damage.

BATTERY REMOVAL

- To remove the battery, turn its key to the off and unlocked position (see “Start-up procedure” on page 17) and remove the key from the keyport. Carefully pull the battery forwards and up until the battery detaches from the battery mount.
- Be careful not to drop or damage the battery when loose from the bike.

**NOTICE:** When the battery is off its mount, protect the battery terminal contacts from damage and be sure not to touch them. If terminals are damaged, please discontinue use and contact Rad Power Bikes Product Support immediately.

BATTERY INSTALLATION/MOUNTING

- To install the battery, make sure the keyport is in the off/unlocked position and the key is removed.
- Do not force the battery into the battery mount; carefully align and slowly slide the battery down until it's in place.
- Ensure the battery is properly secured to the bike before each ride by locking the battery (see “Start-up procedure” on page 17) and then carefully pulling up on it with both hands to test the security of the battery's attachment to its mount.

Before you charge

Before you charge your battery, make sure to first check the battery, charger, and electrical cables for signs of damage. Store and use the charger in a safe place—away from children, direct sunlight, dirt, debris, tripping hazards (including electrical cords), or any materials that could ignite in the unlikely event of a charger or battery malfunction. Position the charger and battery where they're not at risk for falls or other impacts.

**WARNING:** Letting the charger's plug contact metal objects could cause a power discharge (a spark), which could injure you or create a fire hazard.

**WARNING:** Letting a battery charge unattended increases the risk that a charging problem will go undetected and lead to component damage or a fire hazard. Always charge your battery where you can monitor it.

Your battery needs to charge at room temperature or a bit cooler (10°C to 25°C (50°F to 77°F)). It generates heat while charging, but it's designed to air-cool; keep it uncovered and the lights facing upwards on a flat, stable, hard surface.

**NOTICE:** Charging your battery in excessively hot conditions or interfering with its ability to air-cool can damage your battery or charger. Always charge your battery at room temperature: 10°C to 25°C (50°F to 77°F). Charging your battery at low temperatures may slow charging or prevent a full charge. Keep the battery and charger uncovered, make sure the charger is on a hard, flat, stable surface, and use the charger right-side-up (with charging lights facing upwards).

Charging procedure

To charge your battery, mind the advice in “Before you charge” above and then follow these steps.

1. **Ensure the battery power is off.** Align the keyport with the appropriate off position by inserting the key into the keyport and rotating to align the key with one of the battery power “off” icons:
   - The “**Power off, battery locked to frame**” icon (position B in the illustration): Use this position for charging with the battery on the bike.
   - The “**Power off, battery unlocked from frame**” icon (position C in the illustration): Use this position for charging the battery removed from the bike. Align the key with this position, remove the key from the battery, and then remove the battery from the bike.

<table>
<thead>
<tr>
<th>Keyport &amp; key positions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Power on, battery locked to frame</td>
</tr>
<tr>
<td>B</td>
<td>Power off, battery locked to frame</td>
</tr>
<tr>
<td>C</td>
<td>Power off, battery unlocked from frame (for battery installation and removal)</td>
</tr>
</tbody>
</table>
2. **Open the rubber cover on the charging port** on the opposite side of the battery from the key-port (see “Charging port with rubber cover in place”). Note that the key-port does not have a cover.

3. **Plug the charger into the battery’s charging port.** With the battery installed onto or uninstalled from the bike, place the charger on a flat, secure surface with the charging indicator lights facing up, and connect the DC output plug from the charger (round barrel connector) to the charging port on the side of the battery.

4. **Plug the charger into a power outlet.** Connect the charger input plug (100/240-volt plug) to the power outlet. Charging should initiate and will be indicated by both LED charge status lights on the charger turning red. When charging is complete, one indicator light will turn green and the other will remain red.

5. **Unplug the charger from the outlet, then the charging port.** Once fully charged, indicated by one charging indicator light turning green (and one remaining red), unplug the charger from the wall outlet first and then remove the charger output plug from the battery charging port. Be sure to pull gently on the plugs, not on the cables themselves.

**NOTICE:** The charger is designed to stop charging automatically when the battery is full. Nevertheless, leaving your battery charging longer than necessary can cause needless wear. We recommend you remove the charger from the battery within one hour of the green light indicating a complete charge. Store the charger carefully, making sure its plug does not come in contact with liquids, dirt, debris, or metal objects, which can damage the plug and interfere with future operation.

**TIP!** We recommend you follow these steps when plugging in and unplugging your charger.

**To plug in your charger:**
1. Start with the charger unplugged from both the power outlet and battery.
2. Plug the charger into the battery.
3. Plug the charger into the power outlet.

**To unplug your charger:**
1. Start with charger plugged into both the power outlet and battery.
2. Unplug the charger from the power outlet.
3. Unplug the charger from the battery.

**WARNING:** Charging your battery with a charger other than one supplied by Rad Power Bikes and designed for your specific bike serial number can cause damage to your bike’s electrical system or create a fire hazard. Only use a battery charger designed for your bike and supplied by Rad Power Bikes.

### Estimated charging time

The time the charger takes to fully charge the battery depends on distance travelled, riding characteristics, terrain, payload, battery age, and other factors. The table provides a rough estimate of charge time based on common distances travelled in regular operation.

**NOTICE:** The battery may take longer to charge when fully depleted, when very new, and after 3–5 years of regular use. If your battery doesn’t seem to be charging normally, is taking longer to charge than expected, or you’re experiencing substantial reduction in range, discontinue use and contact Rad Power Bikes Product Support.

### Long-term battery storage

If storing your bike from Rad Power Bikes for longer than two weeks at a time, follow the recommendations below to maintain the health and longevity of your battery.
• Power off the battery either locked to the frame or unlocked and removed from the frame for storage (see "Start-up procedure" on page 17 for key-position details).
• Store the battery in a dry, climate controlled, indoor location between 10°C to 25°C (50°F to 77°F).
• We recommend that you store your battery at approximately 40-75% charged. Check the battery's charge level monthly. If necessary, use the charger from Rad Power Bikes to charge the battery to about 40-75% charged.
• Storing your battery for long periods at full charge can cause range decline over time.
• Storing your battery for long periods at very little or no charge can cause permanent range decline or a non-functional battery.

**NOTICE:** Incorrect storage of your battery can result in a damaged or non-functional battery. Follow the above recommendations to reduce such risk.
Operation

**WARNING:** Incorrect assembly, maintenance, or use of your ebike can cause component or performance failure, loss of control, serious injury, or death. Even if you’re an experienced bike rider, you must read and understand the entire manual and any documentation provided for subcomponents or accessories before riding. If you are not sure you have the experience, skills, and tools to correctly perform all assembly steps in the manual and the assembly video at www.radpowerbikes.ca/assemble, consult a local, certified, reputable bike mechanic.

How the electrical system works

Your RadRunner is equipped with two ways for a rider to use power assistance from the motor to propel the bike forwards: a pedal assist system (PAS) and a twist throttle.

**HOW PEDAL ASSIST WORKS**

The rider can engage the pedal assist system (PAS) while pedalling, and it will call up assistance from the motor to help propel the bike forwards.

Pedal assist uses a cadence sensor built into the drivetrain of the bike. The cadence sensor detects when the rider revolves the pedals and signals the electric motor to provide the level of pedal assistance (0-4) that the rider has selected.

**HOW THE THROTTLE WORKS**

The throttle is located on the right side of the handlebar. The rider can use it with a twist of the throttle grip to propel the bike forwards without pedalling.

To engage the throttle while riding, slowly and carefully rotate it toward yourself. The more you twist, the more powerfully the motor will propel the bike forwards. Once you release the throttle or apply the brakes, the throttle will no longer propel the bike forwards. Always keep one hand on the brake lever and be prepared to squeeze the lever to disengage the throttle if needed, or turn off the bike to prevent accidentally engaging the throttle.

Some ebikes from Rad Power Bikes are equipped with an on/off switch for the throttle. These switches can be set to "off" even while the bike electrical system is on in order to prevent use of the throttle.

**NOTICE:** Throttle and motor use may not be allowed in all areas. It is your responsibility to know and follow local ebike regulations, rules, and traffic laws where you ride.

Battery key positions

Familiarize yourself with the keyport and key positions before riding the bike. **Always remove the key before getting on your bike to ride it.**

- Any time the battery is in key position A, (power on, battery locked to the frame) the power button on the LED display will turn the bike on and off, and the battery cannot be removed.
- If the battery is in key position B, (power off, battery locked to the frame) no buttons or controls can be activated, the bike will remain off, and the battery cannot be removed.
- Any time the battery is in key position C, (power off, battery unlocked from the frame) the battery must be removed from the bike before moving or riding the bike. Ensure the key is removed before sliding the battery out of the mount.

**CAUTION:** An unlocked or improperly attached battery can fall off a moving bike, causing damage or injury. Always check that the battery is properly attached and locked to the frame before moving or riding your bike.

<td>Press and release to turn bike on/off.</td>
</tr>
</tbody>
</table>

* For more information on walk mode, please visit our Help Center at [www.radpowerbikes.ca/help](http://www.radpowerbikes.ca/help).

**CAUTION:** Using walk mode inappropriately can cause you to lose control of the bike, causing bike damage or injury. Use walk mode only while dismounted from the bike, with both hands on the handlebar, and with at least one hand on a brake lever so that you can quickly cut off power to the motor if necessary.

Headlight operation

The headlight and taillight on the RadRunner will illuminate when the bike is powered on, as a default safety feature. We recommend riding with the headlight on, even during daylight. The headlight can be turned off for daytime riding by pressing and releasing the headlight button once the bike has been powered on.

The headlight on the RadRunner is designed to help others see the bike, especially in low-light conditions. Depending on rider preference and visual ability, an additional bike light may be necessary to illuminate the path ahead for the rider.

Start-up procedure

After the bike has been properly assembled according to the assembly video, all components are secured correctly, a certified, reputable mechanic has checked the assembly, and you have read this entire manual, turn on the bike and select a pedal assist level following the steps below:
1. **Familiarize yourself with the key positions.** The “Keyport & key positions” illustration shows the keyport in position B, in line with the small circle icon with and “X” through it. In key position B, the battery power is off and battery is locked to the frame.

2. **Check that the battery is locked securely.** Ensure the keyport is aligned with the circle containing an “X,” in the “Power off, battery locked” position (B) as explained above. If needed, insert the key and align with the “Power off, locked” icon (B). Remove the key and carefully use both hands to pull up on the battery to test that the lock is secure.

   **CAUTION:** Getting onto the bike or riding it with the key in the battery can cause injury to your leg and damage to the key or lock mechanism. Always remove the key before riding the bike.

3. **Turn on the bike.** With the battery locked in place, insert the key and turn clockwise to the open circle icon, which is the “Power on, battery locked to frame” position (A), as shown in the image above. Remove the key by pulling directly backwards without twisting so the key position remains in the “Power on, battery locked to frame” position. Locate the LED display (near the left handlebar grip). Hold down the power button for approximately two seconds until power is delivered to the LED display and the headlights turn on.

4. **Try out your bell** if you haven’t already! It’s an important safety tool for alerting others to your presence, especially when passing. The bell is integrated into the left brake lever on your handlebar. To ring it, flick the bell lever; see the illustration “Handlebar features” on the previous page.

5. **Select your desired level of pedal assistance (PAS)** from 0 through 4 using the up and down arrows on the LED display. Level 0 provides no pedal assistance, level 1 provides the lowest amount of pedal assistance, and level 4 provides the highest amount. Start in PAS level 0 or 1 and increase PAS levels one at a time as you get comfortable.

   **WARNING:** Engaging the pedal assist feature, especially at a high setting, will cause acceleration that may be greater than expected, especially for relatively new riders, and that can cause loss of control, serious injury, or death. To minimize risk, start at PAS level 0 or 1.

6. **Begin riding carefully.** With the proper safety gear and rider knowledge, you may now operate your bike from Rad Power Bikes. Begin by pedalling on flat ground, clear of obstacles and people, with the bike at pedal assist level 0 or 1. You may also use the throttle to accelerate and maintain your desired speed.

   **NOTICE:** While you’re getting to know your bike, don’t ride with cargo (see “Carrying cargo or passengers” on page 21 for more information). Review, understand, and follow the safety information in “Ride as safely as possible” on page 31.

7. **Use the throttle** (next to the right handlebar grip) by slowly and carefully rotating it toward the rider. Only use the throttle when you’re seated on the bike and prepared for it to move forwards. Note that the throttle can be engaged any time the bike is powered on unless you have a model that includes a throttle on/off switch, which can use to prevent the throttle from activating motor assistance.

   **WARNING:** Be careful not to accidentally twist the throttle, which can cause sudden acceleration. If you’re not prepared for this acceleration, you can lose control of the bike, which can lead to serious injury or death. To minimize this risk, always keep at least one hand ready to squeeze the brake lever to cut off power to the motor. When you dismount, power off the bike before moving it.
Brake light features and operation

The RadRunner is equipped with a taillight/brake light that is integrated into the electrical system. When you turn on your bike, both the headlight and taillight will illuminate to make you more visible to other vehicles. Any time the bike is powered on, squeezing one or both brake levers on the handlebar will activate the brake light, causing the taillight to illuminate additional areas.

The taillight also has a “flash mode” you can activate. To do so, power on the bike, and then, while dismounted from the bike, press the rubber flash-mode button on the bottom left side of the taillight housing. When in flash mode, the taillight will flash continuously, and squeezing the brake lever(s) will illuminate a brighter, solid brake light. Flash mode will continue if the headlight is turned off. But if you turn the bike off and back on, you’ll need to re-activate flash mode.

**NOTICE:** Flashing lights may not be legal in some areas. It is your responsibility to know and obey all applicable laws where you ride your ebike.

Battery capacity display

The display on the handlebar of your RadRunner features a battery capacity gauge (like a fuel gauge on a car). This gauge calculates the remaining battery charge based on the current battery power output (instantaneous voltage reading), and can fluctuate while riding as power demand and/or output changes.

Once only one bar is illuminated, users should charge the battery as soon as possible. At lower states of charge, the bike may limit power output to make the remaining power last a little bit longer. When the battery is fully depleted, the last bar will begin to flash, alerting the user that they’re about to lose all electrical power. Any time your power is off or depleted, you can still propel your bike by pedalling it.

Driving range

We suggest that you select a lower pedal assistance level when you’re getting to know your RadRunner and travel routes. Once you become familiar with your range requirements and the capabilities of your bike, you can adjust your riding characteristics if you desire.

The table in this section provides range estimates under example conditions to help owners understand the factors that can increase or decrease range. Rad Power Bikes makes no claims about the range that individual users might experience in a particular situation.

<table>

Best practices for extending range and battery life

Follow the best practices listed below to help extend your range and battery life.
Whenever possible, avoid applying full throttle when the bike has slowed to very low speeds, has stalled, or stopped.

Pedal to assist the motor when climbing hills and accelerating from a stop.

Reduce your power consumption whenever possible.

Do not climb hills steeper than 15% in grade.

Avoid sudden starts and stops.

Accelerate slowly.

Parking, storage, and transport

Please follow these tips to ensure your bike is well cared for when you’re not using it.

PARKING AND STORAGE

- Park in accordance with local rules and regulations, especially if you’re in a public place.
- Park indoors whenever possible. If you must park outdoors in rain or wet conditions, do not do so for an extended period of time, and afterward park in a dry location to allow the bike systems to dry out. When any bike is exposed to wet conditions, it will need a more frequent maintenance schedule to prevent rust and corrosion and to ensure all systems work safely. See “Guard against rust, corrosion, and water damage” on page 29 for more information.
- Avoid parking or storing your bike in direct sunlight, which can cause damage to the display.
- Do not park or store your bike in excessive heat, such as inside of a parked car on a hot day. Always store your bike within this temperature range: -20°C to 60°C (-4°F to 140°F).
- Switch the power and any lights off to conserve battery power. Remove the key from the bike and ensure the battery is locked to the frame in the off position or use the key to remove the battery and bring it with you for security.
- Register your bike with BikeIndex, 529 Garage, or a regional bike registry (ask your local bike shop for recommendations) to increase the chance you’ll get your bike back in the unfortunate event it’s stolen.
- Lock up your bike to reduce risk of theft. You can purchase a lock from our website at www.radpowerbikes.ca or consult a local, certified, and reputable bike shop.

TRANSPORTING

- When pushing or carrying the bike, turn off the power to avoid accidental acceleration from the motor, e.g. by mistakenly twisting the throttle. Another option is to keep the bike powered on and use “walk mode”—see “Electrical controls and operation” on page 17 for more information.
- Only use racks (i.e., a bike rack for your car or other vehicle) designed for the size and weight of your ebike. Pay particular attention to whether the rack can accommodate the width of your ebike tires.
- When carrying your ebike on a rack for transport, remove the battery, and place/wrap it securely inside your vehicle, making sure it can’t roll around and that its plugs and contacts are protected. This will reduce the weight of the bike, make lifting and loading it easier, and keeps your battery safer.
- Do not leave a battery in direct sunlight or any location that is or may become excessively hot or cold, like a parked car, for extended periods.
- Before using public transportation (buses, trains, etc.) to transport your ebike, check with the relevant transportation authority for any rules that might pertain to ebikes, including rules governing weight limits, tire widths, lithium-ion batteries, etc.
- Avoid transporting bike(s) from Rad Power Bikes on a vehicle rack during rain, which may cause water damage to the electrical components. See “Guard against rust, corrosion, and water damage” on page 29 for more information.
Carrying cargo or passengers

Carrying cargo or passengers can help you have more fun on your ebike and replace trips you’d otherwise make with a car, which we think is rad. It also involves additional risks, which require special attention and care. You must read and understand this entire chapter and the rest of the manual plus any documentation that comes with any accessories you purchase before you ride your ebike with cargo and/or any passenger.

Rad Power Bikes provides a wide range of accessories to make it easier to carry cargo. Your RadRunner is designed to carry a passenger on its built-in rear rack if you add appropriate accessories. Depending on the weight, age, and other characteristics of the person you wish to carry, you may need an approved child seat or other accessories as explained in “Carrying passengers” on the next page.

For more information on optional accessories for your ebike, please go to www.radpowerbikes.ca.

**NOTICE:** Carrying a passenger, child, or cargo may not be allowed in all areas. It is your responsibility to know and follow all applicable laws where you ride your ebike.

---

### Weight limits

The total maximum weight limit (payload capacity) of your ebike, listed below, includes the weight of the rider as well as clothing, riding gear, cargo, accessories, passengers, etc. See “Carrying passengers” on the next page for more safety information about passengers.

**Total maximum payload of the RadRunner:** 136 kg (300 lb)

**Rear rack maximum payload:** 54 kg (120 lb)

**Kickstand maximum payload:** 45 kg (100 lb)

The maximum payload capacity and other important safety information for specific Rad Power Bikes accessories will come with those products and/or be available online at www.radpowerbikes.ca/help.

**WARNING:** Never exceed the payload limit of any accessory or component of your bike even if you attach it an accessory that carries a higher weight limit. Overloading any component can cause component failure, loss of control, serious injury, or death.

---

### Carrying loads (cargo or passengers) safely

Follow these recommendations to maximize safety when using your RadRunner to carry cargo or passengers.

- Carrying extra weight significantly affects braking, acceleration, turning, balancing, etc. These effects can be increased by challenging riding conditions, such as when roads are wet or slick. Hills that are normally easy to climb or descend without cargo can become challenging or even dangerous once extra weight is loaded onto the bike. Extra weight will increase the time it takes to slow the bike when braking.

- Practise riding with light cargo in a flat, open area that’s free of obstacles before attempting to ride with heavier loads, and/or in wet or hilly conditions.

- With extra weight on your bike, it’s more important than ever to use both front and rear brakes, and always engage the rear brake first to prevent excessive strain on the front wheel and fork and to prevent loss of control. Ensure both front and rear brakes are properly adjusted, maintained, and applied.

- Load cargo as low as possible to keep the bike’s centre of gravity low and improve stability.

- Hold onto the bike when loading and carrying cargo and/or passengers. The kickstand is not designed to be used for loading cargo or passengers. Do not assume the bike is stable and balanced when using the kickstand.

- Ensure cargo loads are properly secured and periodically check that nothing loosens, risks interfering with any moving parts, or risks touching or dragging on the ground.

- When carrying heavy loads or passengers, plan your routes to avoid challenging hills and other hazards.
It is always the rider’s responsibility to ensure cargo or a passenger loaded on the ebike will not interfere with the rider’s ability to safely operate the ebike.

**WARNING:** Failure to ensure that cargo or passengers can’t interfere with the rider’s control of the bike can lead to serious injury or death. The rider is always responsible for securing loads, loose straps, and assessing passenger’s ability to ride safely. Please see “Carrying passengers” below for more information.

**WARNING:** Carrying cargo or passengers significantly affects braking, acceleration, turning, and balancing, which can increase the risk of falls and other accidents, potentially leading to property damage, serious injury, or death. To minimize such risk, practise riding with light cargo in a flat, open area before attempting to carry heavier cargo or passengers, especially on roads or hills and in wet conditions.

**WARNING:** Loading cargo or passengers without holding onto the RadRunner can cause the bike to tip, leading to damage or serious injury. The kickstand is designed to hold up an unoccupied, unloaded bike on a hard, flat, stable surface, not to support the weight of the rider, passengers, or cargo. Always hold onto your RadRunner when loading or unloading cargo or passengers.

**WARNING:** Using the front brake by itself can cause excessive stress on components, damage to the bike and parts, loss of control, injury, or death. Always apply the rear brake before applying the front brake, using both brakes for all operations.

---

**Carrying passengers**

Your RadRunner is designed to carry one rider and one passenger. Potential passengers will require certain accessories in order to ride on the bike. What accessories they need (e.g., an approved child seat, the Passenger Package, etc.) will depend on their size, age, and other characteristics. When carrying passengers on your RadRunner, be sure to follow the recommendations in “Carrying loads (cargo or passengers) safely” on the previous page as well as the recommendations below. Ensure that the rider and any passenger are wearing a properly fitted and approved helmet.

- Always use the Passenger Package and any other passenger accessories required for the age, weight, and ability of the passenger you wish to carry. It is not safe for passengers to ride on the rear rack without appropriate accessories. Please refer to the accessory-specific information at www.radpowerbikes.ca for the passenger accessories available for your RadRunner.

- When carrying a child, you must ensure that child meets the criteria for an approved child safety seat (the Thule Yepp Maxi child seat). Refer to the seat manufacturer’s instructions for more information on rider criteria (www.thule.com). Otherwise, you must have the Passenger Package installed, including the wheel skirts, foot pegs, and the passenger seat.

- To use the Passenger Package, passengers must be large enough to rest their feet on the foot pegs, and they must be able to understand that they cannot stand on the foot pegs, which have a payload capacity of 18 kg (30 lb) per side. Please refer to the safety guidelines online for the passenger accessories available for your RadRunner.

- We strongly recommend using fenders with the Passenger Package. A properly installed rear fender will help keep hands and feet clear of the spinning wheel.

- Do not allow passengers to stand or kneel on the rear rack or any other bike components.

- Passengers should sit directly over or forwards of the rear wheel, and no more than 18 kg (40 lb) should be loaded over the rear 1/3 of the rear rack.

- Do not allow passengers to sit sideways or backwards on the rear rack.

**DANGER:** Using your RadRunner to transport a passenger who is not the appropriate size or age for your child seat, or who does not have the health, motor control, or impulse control to ride safely as a passenger, can lead to serious injury or death of the rider or passenger. Read and understand the specifications of any child seat you purchase and all safety-, cargo-, and passenger-related information in this manual. It is your responsibility to assess the ability of a potential passenger to ride safely. If you’re not certain, consult a physician.

**DANGER:** Leaving a child unattended on a bicycle creates a VERY HIGH RISK of the bike tipping over, causing serious injury or death. Always remove your child from the bike before you look away or walk away from the bike.

**WARNING:** To reduce the risk of injury, always closely supervise children if and when you use your RadRunner near them.
**WARNING:** Serious injury or death can occur if clothing or body parts contact either wheel or other moving parts while the bike is in motion.

### USING A CHILD SEAT FOR SMALL CHILDREN

Your RadRunner is designed to work with the Thule Yepp Maxi child seat, which can attach to the “Yepp window” on your RadRunner’s built-in rear rack.

The Thule Yepp Maxi child seat can be purchased from Rad Power Bikes at [www.radpowerbikes.ca](http://www.radpowerbikes.ca).

For installation instructions, safety notices, age/weight requirements, general information, and tips on safe operation of the Thule Yepp Maxi child seat accessory, visit the manufacturer’s website online at [www.thule.com](http://www.thule.com) or visit the Rad Power Bikes Help Centre at [www.radpowerbikes.ca/help](http://www.radpowerbikes.ca/help).

---

### Carrying pets

Rad Power Bikes understands that you may want to bring your pet along on your bike adventures, and we think that's rad. We urge you to take great care to protect your furry friend and yourself. To check out the pet accessories that we have tested for safety and compatibility with our ebikes, please visit [www.radpowerbikes.ca](http://www.radpowerbikes.ca). We cannot recommend any pet carrier or restraint system that we have not tested for compatibility and safety with your ebike from Rad Power Bikes.

**WARNING:** Transporting a pet using any bike puts you and your pet at risk of injury or death, especially if the pet distracts you, affects your balance, interferes with moving bike parts, etc. It’s impossible to anticipate every situation that can occur while riding with a pet. If you carry a pet on any bike, you assume any and all inherent risks.

### Maintenance

Follow these maintenance guidelines to ensure your RadRunner is safe and fun to ride.

#### Check and service your bike regularly

On any bike, certain parts need to be replaced periodically due to wear, and sometimes parts become damaged for various reasons. Check your bike before each ride by following the directions in “Safety checklists” on the next page. Have your bike regularly serviced by a certified, reputable bike mechanic. See “Recommended service intervals” on page 26 for more information.

Components of any ebike are subject to higher wear compared to the components of bikes without power assistance. This is because ebikes can travel at higher average speeds than regular bicycles and generally weigh more. Higher wear is not a defect in the product and is not subject to warranty. Typical components affected are the tires, brake pads and rotors, suspension forks, spokes, wheels, and the battery.

If you need to replace a part on your bike, visit [www.radpowerbikes.ca](http://www.radpowerbikes.ca). If you want something that isn't listed there, contact Rad Power Bikes Product Support. Be extremely careful about using parts or accessories that Rad Power Bikes has not tested for safety and compatibility with your specific bike model.

**WARNING:** Using aftermarket accessories or components (trailers, stands, vehicle racks, etc.) that have not been tested by Rad Power Bikes for safety and compatibility with your specific bike may void your warranty, create an unsafe riding condition, result in bike/property damage, or cause serious injury or death. If you use replacement parts or accessories not tested and recommended by Rad Power Bikes, you do so at your own risk.
Safety checklists

BEFORE YOUR FIRST RIDE

- Make sure handlebar cables were routed correctly when the handlebar was installed. Turn the handlebar fully to the left and right and make sure this doesn't pull any of the cables or wires taut.
- Make sure your pedals are secure using a pedal wrench. Torque to 35 Nm.
- Check that the cable connectors on the bike are all plugged in securely and that nothing loosened in shipping.
- Check the brake functions per the directions in “Checking brakes & motor cutoff switches” on page 27 but note that brakes can rub a little the first few times you ride. This is okay and normal; any squeak or noise should go away with use.
- Check everything on the “Before every ride” list below.

BEFORE EVERY RIDE

Before every ride or every 40–72 km (25–45 miles), follow the safety checklist in the table below. If you find anything amiss with your bike, don't ride it until you're sure it's fixed. Consult a local, certified, and reputable bike mechanic or explore our Help Centre at www.radpowerbikes.ca/help if you have any questions.

Fasteners

- Ensure all fasteners are correctly tightened according to the specifications in “Tools and recommended torque values” on page 9.
- Check that all quick-release levers, including the quick release on the front wheel and the seatpost, are tight and properly secured. Ensure the front wheel quick-release lever is positioned so that the front fork lower doesn't prevent it from closing fully.
- Check that the fasteners on any accessories you've added are properly tightened according to the manufacturer's instructions.

Brake system

- Check brake pads and ensure the brake pad material isn't thinner than the backing plate it attaches to.
- Ensure brake pads are correctly positioned in relation to the brake rotors.
- Ensure brake cables are lubricated, correctly adjusted, and show no obvious wear.
- Ensure brake levers are properly positioned and tightly secured to the handlebar.
- Ensure the brake lever tension is appropriate.
- Check that the taillight brightens when you squeeze each brake lever.
- Use the techniques in “Checking brakes & motor cutoff switches” on page 27 to test the brake levers, brakes, and motor cutoff switches.

Wheels & tires

- Ensure tires are holding air and inflated to within the PSI limits displayed on the tire sidewalls.
- Ensure tires have good tread, have no bulges or excessive wear, and are free from any other damage.
- Ensure rims run true and have no obvious wobbles, dents, or kinks. See “Tire and wheel care” on page 28.
- Check each wheel spoke. If any are loose or broken, seek help from a certified, reputable mechanic.
- Check the axle nuts on the rear wheel to ensure they are correctly tightened (see “Tools and recommended torque values” on page 9).
- Check the security of the front-wheel quick release and the rear wheel mounting hardware. The wheel security and hardware torque should also be checked on a regular basis (see “Tools and recommended torque values” on page 9). Either wheel can become loose or unsecured with normal use.

WARNING: An improperly secured front or rear wheel can cause loss of control, accidents, serious injury, or death. Check that both wheels are properly secured during assembly and before each ride.

Steering

- Ensure the handlebar and stem are correctly aligned, adjusted, and tightened for proper steering.
- Perform a handlebar twist test to ensure the stem clamp bolts are secure. See “Handlebar twist test” on page 29.
Ensure the handlebar is set correctly in relation to the fork and the direction of travel.
Ensure the handlebar grips are secure and undamaged.

**Bearings**
- Check that headset, wheel, pedal, and bottom-bracket bearings are lubricated, run freely, and display no excess movement, grinding, or rattling.

**Drivetrain: cranks, pedals, chain, chain tensioner**
- Ensure pedals are securely tightened to the cranks. See “Tools and recommended torque values” on page 9.
- Ensure the cranks are not bent and are securely tightened to the bottom bracket. See “Tools and recommended torque values” on page 9.
- Ensure the chain is clean, lubricated, and runs smoothly. Take extra care with chain maintenance if the bike is used in wet, salty, dusty, or otherwise damaging conditions.
- Check that the chain tensioner is aligned and functioning properly.

**Frame, fork, and seat**
- Check that the frame and fork are not bent or broken.
- Check that the seat is adjusted properly, the seatpost quick-release lever is securely tightened, and the seat does not move when the lever is closed. Ensure that the seatpost minimum insertion marking is fully inserted into the frame.

**Motor drive assembly & throttle**
- Ensure the hub motor is spinning smoothly and is in good working order.
- Ensure the power cable running to the hub motor is secured and undamaged.
- Check the axle nuts to ensure they are correctly tightened (see “Tools and recommended torque values” on page 9).
- Ensure the torque washers, torque arm, and torque arm bolt are in place and secured.
- Ensure the throttle and pedal assistance are operating normally.

**Battery**
- Ensure the battery is charged.
- Ensure there is no damage to the battery.
- Lock the battery to frame and check that it is secured. Remove the key before riding.
- Ensure the battery gauge on the LED Display and the charge status indicator on the battery read similarly.

**Cables**
- Look over electrical cable connectors to make sure they are fully seated and free from debris or moisture.
- Check cables and cable housing for obvious signs of damage.
- Ensure cables are secured away from moving parts.
- Ensure headlight, taillight, and brake light are functioning, adjusted properly, and unobstructed.

**Accessories & safety gear**
- Ensure all reflectors are properly fitted and not obscured.
- Ensure all accessories and components installed on the bike are properly secured and functioning according to their manufacturer’s specifications.
- Check all safety gear, clothing, cargo, and accessories for loose or potentially loose straps/elements and secure them.
- Ensure rider and any passengers are wearing a helmet and other required riding safety gear, and inspect these items for signs of damage.
- If your bike has fenders: Ensure they are centred over the wheels, adjusted properly, properly secured (see “Tools and recommended torque values” on page 9), and have no cracks or holes.

**WARNING:** Riding your bike when any component’s useful life is surpassed can cause that component to fail, resulting in loss of control, serious injury, or death. Pay attention to signs of wear such as cracks, scratches, component colour change, and operational changes that could indicate a component needs replacing. Before each ride, check your bike using the “Safety checklists” on the previous page. Perform regular maintenance according to “Recommended service intervals” on the next page. If you're not sure you have the experience, skills, and tools to perform safety checks and regular maintenance, consult a local certified, reputable bike mechanic for help.
AFTER EVERY RIDE

- Store your bike and battery in a dry location and take other sensible precautions as described in “Parking, storage, and transport” on page 20.
- Guard against damage from the elements by following the recommendations in “Guard against rust, corrosion, and water damage” on page 29.
- Charge your battery in a temperature-controlled location and follow the recommendations in “Battery information” on page 12.

Recommended service intervals

Regular maintenance of any bike is key to ensuring the best possible performance and reducing wear and tear on systems. Ideal service intervals vary depending on use conditions. We generally recommend inspections, service, and necessary replacements be performed at the time and distance intervals described below, but you should have your bike serviced more frequently if you ride aggressively, with heavy payloads, or in harsh conditions. Have your bike inspected immediately if you notice problems or your bike has been involved in a fall or other accident.

**WARNING:** Have your bike inspected by a certified, reputable bike mechanic after any fall, crash, or accident, as these can cause damage (visible or internal/not readily apparent), make your bike unsafe, and lead to serious injury or death. Be particularly cautious about using a battery that has experienced a significant impact from a fall or crash; a damaged battery may not show external signs of damage. Using a damaged battery or charger can create additional bike damage or a fire hazard. For more information, see “Battery information” on page 12.

AFTER BREAK-IN PERIOD OF 80–160 KM (50–100 MILES)

**Inspect**
- Check all cables and the chain for stretch.
- Check spoke tension and the trueness of the wheels.
- Check all bolted connections for loosening and ensure they are tightened to recommended torque values (see “Tools and recommended torque values” on page 9).

**Service**
- Have a certified, reputable bike mechanic perform a thorough tune-up.

**WARNING:** Certain components can stretch or loosen during any bike's break-in period, which can lead to component failure and potential injury or death. Be sure to have a certified, reputable bike mechanic perform a thorough tune-up after this break-in period or sooner if you notice any problems or if you ride aggressively, with heavy payloads, or in harsh conditions.

WEEKLY, 160–320 KM (100–200 MILES)

**Inspect**
- Check hardware for proper torque—see “Tools and recommended torque values” on page 9.
- Check drivetrain for proper alignment and function (including chain, freewheel, chainring, and chain tensioner).
- Check wheel trueness and spoke tension, and check for quiet wheel operation (without spoke noise).
- Check frame for any damage.

**Service**
- Clean frame by wiping frame down with damp cloth.
- If needed, adjust the brake tension.
- Clean and grease the chain.

**Replace**
- Replace any components confirmed to be broken or damaged beyond repair by Rad Power Bikes Product Support or a certified, reputable bike mechanic.
MONTHLY, 400–1200 KM (250–750 MILES)

Inspect  
- Check brake pad wear, alignment, and the brake lever tension.  
- Check chain stretch.  
- Check chain alignment and drivetrain functioning.  
- Check brake cables for corrosion and fraying.  
- Check wheel trueness and spoke tension, and check for quiet wheel operation (without spoke noise).

Service  
- Clean and lubricate drivetrain.  
- Check crankset and pedal torque.  
- Clean brake cables.  
- Tension spokes and true wheels if any loose spokes are found.

Replace  
- Replace brake cables if necessary.  
- Replace brake pads if necessary (typically when the pad material is thinner than the backing plate).

EVERY 6 MONTHS, 1200–2000 KM (750–1250 MILES)

Inspect  
- Inspect drivetrain (chain, chainring, freewheel, and chain tensioner).  
- Inspect all cables and housings.

Service  
- Standard tune-up by certified, reputable bike mechanic.  
- Grease bottom bracket.

Replace  
- Replace brake pads.  
- Replace tires if necessary.  
- Replace cables and housings if necessary.

Checking brakes & motor cutoff switches

All vehicles, including your RadRunner, need reliable brakes. Test your brake levers, brakes, and motor cutoff switches for proper functioning before every ride. If anything seems wrong, take your bike to a local, certified, and reputable bike mechanic, refer to our Help Center (www.radpowerbikes.ca/help), or contact Rad Power Bikes Product Support.

**WARNING:** Touching the brake rotor, which has sharp edges and can get very hot while you’re riding, can cause serious injury, slicing damage, or burns. The brake rotor heats up from normal friction when the brake pads press against the brake rotor to slow or stop the bike. Touching the brake rotor with bare skin can also transfer natural oils to the rotor, which can decrease braking performance. **Do not touch the brake rotor, especially when it’s in motion or after you’ve been riding your bike.** Touch the brake rotor only for necessary maintenance when it is cool, not moving, and while you are wearing gloves or using other appropriate protective equipment.

1. **Test the brake levers.**
   a. Fully squeeze each lever, and ensure neither the front nor rear brake lever touches the handlebar grips.
   b. Ensure both brake levers are properly lubricated. If they are, they’ll be reasonably easy to squeeze without feeling as though there’s grit in the mechanism. When you release them, they will immediately go back to their original position.
   c. Make sure each lever is properly oriented and firmly secured to the handlebar.

2. **Test each brake.**
   a. Squeeze the left brake lever to lock the front brake, and then try to push the bike forwards using the handlebar. The front wheel should not spin.
   b. Squeeze the right brake lever to lock the rear brake. Again, push against the handlebar to try moving the bike forwards. The rear wheel should not spin.

3. **Test the motor cutoff switches.** The front and rear brake levers contain motor cutoff switches, which cut off power from the motor whenever the brakes are applied.
a. In a clear, open area, turn on the bike. With appropriate safety gear and clothing, sit on the bike.
b. Squeeze the left brake lever to engage the front brake.
c. Lightly apply the throttle. The bike should not move since the brake is applied.
d. Release the throttle.
e. Release the brake.
f. Test that the throttle now operates with the brake not engaged.
g. Release the throttle.
h. Perform steps “a”–”g” again, this time with the rear brake lever (on the right side of the handlebar).

Tire and wheel care

The tires and inner tubes that came with your ebike are designed for durability and safety for regular cycling activities. Wheels and tires need to be checked before each use to make sure they’re in good condition. Always replace tires and inner tubes that have punctures, cuts, bulges, damage, or excessive wear before you ride.

TIRE INFLATION

Inflate tubes and tires to within the PSI range stamped onto the tire sidewall. For additional information about tire pressure, please consult our Help Center at www.radpowerbikes.ca/help.

**WARNING:** Underinflating your tires can result in loss of control. Overinflating can make tires burst. Either scenario can lead to serious injury or death. Always maintain the correct air pressure of your tires, which is listed on the tire's sidewall, and use a regulated air source with pressure gauge so that you can measure pressure accurately.

WHEEL “TRUENESS”

Your wheels should always spin straight (“true”) and must be repaired or replaced if they wobble side to side or up and down when spinning. To test them, do this:

1. Spin the wheel.
2. Brace a dull pencil against the frame or fork, with the tip just touching the rim.

If the gap between the spinning rim and pencil changes more than 5 mm, your wheels may need truing. If your wheels become untrue or if spokes loosen, which can happen with normal use, we recommend that you have a certified, reputable bike mechanic perform wheel tuning and truing operations. Do not attempt to true wheels or tighten spokes unless you have the highly specialized skills and tools to do so.

TIRE REPLACEMENT

Even tires equipped with built-in flat-preventative tire liners, like those that come with your RadRunner, can and do get flats from punctures, pinches, impacts, and other causes. If you get a flat tire or see evidence of tire wear, you must replace your tire and/or tubes before operating the bike again. Otherwise, you risk bike/property damage, serious injury, or death.

**CAUTION:** Removing a tube from your wheel rim before the air has been released from it can cause the tube to burst, potentially causing serious injury. Always release air pressure before removing your tube.

**WARNING:** Aftermarket tires or inner tubes not provided by Rad Power Bikes may not be compatible with your wheels or the performance requirements of your ebike. Such tires can fail or create unsafe riding conditions, causing serious injury or death. Always use replacement tires and tubes that are sized to be compatible with your bike frame. For safety, and if required by law, ensure replacement tires have sufficient reflective sidewall striping.

For more information on tire or tube replacement, visit www.radpowerbikes.ca/help or contact Rad Power Bikes Product Support.
Handlebar twist test

**WARNING:** An improperly secured wheel and/or handlebar stem can cause loss of control, accidents, serious injury, or death. Check that the front wheel and handlebar stem are properly secured during assembly and before each ride.

1. **Brace the front wheel.** Stand at the front of the bike, facing the handlebar, and brace the front wheel between your feet and lower legs.

2. **Try to twist the handlebar.** Hold both handlebar grips and push forwards with one hand while pulling back with the other. Push and pull at the same time with about 20 lb of force with each hand.

3. **Ensure the handlebar and wheel stay properly aligned.** The handlebar and handlebar stem should be tightly secured, and the handlebar should be perpendicular to the front wheel.

4. **Repeat the twist test pulling/pushing with the opposite hands,** using about 20 lb of force pushing with one hand and 20 lb of force pulling with the other hand.

5. **If needed, align the handlebar and stem and torque the stem clamp bolts evenly.** Instructions for doing so are in “Assembly instructions for the RadRunner” on page 4. Be sure to torque the stem clamp bolts evenly to the specification listed in “Tools and recommended torque values” on page 9. After torquing the stem clamp bolts to the proper specification, perform the twist test again. If the handlebar still moves, contact Rad Power Bikes Product Support.

**WARNING:** If you are not sure you have the experience, skills, and tools to correctly perform all steps to secure and verify the security of the handlebar, front wheel, and handlebar stem you MUST consult a certified, reputable bike mechanic to check your work and/or secure those components to the bike properly.

Guard against rust, corrosion, and water damage

**WARNING:** Damage to your eBike’s electrical system caused in any manner, including water intrusion, can lead to battery failure, electrical system malfunction, or electrical fire and consequent property damage, injury, or death. Follow all recommendations to minimize chance of water damage. If you have any questions, contact Rad Power Bikes Product Support.

Like any vehicle used outdoors, your RadRunner needs care to ensure it isn’t damaged by the elements. Follow these steps for a long, healthy life for your eBike:

- Store under shelter and in an upright position; avoid leaving the bike in the rain or exposed to corrosive substances such as water, salt, or de-icing substances. If exposed to rain, dry your bike afterward, and apply an anti-rust treatment to the chain and other unpainted steel surfaces.

- To clean your eBike, turn the bike and battery off and wipe the frame with a clean, damp cloth. If needed, apply a mild, non-corrosive detergent mixture to the damp cloth and wipe the frame. Dry by wiping with a clean, dry cloth. Never use high-pressure water on your bike. Wipe down your bike frequently and wipe or spray all unpainted mechanical parts with anti-rust treatment.

- If painted metal parts become scratched or chipped, use touch up paint or nail polish to prevent rust.

- Never immerse or submerge the bike or any components in water or liquid, which can damage the electrical system.

- Avoid riding on the beach, in coastal areas with high-salinity fog, or on surfaces treated with salt or de-icing compounds. Doing so exposes your bike to salt or other substances that are very corrosive. Corrosion of electrical components can lead to permanent damage that can cause battery failure, electrical system failure, or electrical fire. Damage from corrosion is not covered under warranty.
# Troubleshooting

<table>

<tr>
<td>Brakes rubbing</td>
<td>Adjust the brakes</td>
</tr>
<tr>
<td>Faulty, damaged, or aged battery</td>
<td>Contact Rad Power Bikes Product Support to replace battery. Disconnect and store damaged battery in a safe location and recycle or dispose of as soon as possible according to local rules.</td>
</tr>
</tbody>
</table>
The battery won't charge:

- Charger not well connected: Adjust the connections
- Charger damaged: Replace the charger
- Battery damaged: Disconnect and store battery in a safe location and recycle or dispose of as soon as possible according to local rules. Contact Rad Power Bikes Product Support to replace battery.
- Wiring damaged: Replace
- Charge fuse issue: Replace the 5A charge fuse

Wheel or motor makes strange noises:

- Loose motor cable connection: Reconnect cable
- Damaged wheel spokes or rim: Repair or replace
- Damaged motor wiring: Replace motor

Error detection

Your RadRunner is equipped with an error detection system integrated into the display and controller (see "Electrical controls and operation" on page 17 for more information). In the rare event of an electrical issue with the bike, you may see a specific combination of lights flash on the Pedal Assistance Level lights on the display. If this happens, we recommend that you cease operation, take a short video of the light(s) flashing if possible, and then go to the Rad Power Bikes online Help Center (www.radpowerbikes.ca/help) for more information.

The following errors are the most common and can aid in troubleshooting.

<table>
<thead>
<tr>
<th>PAS lights flashing</th>
<th>Error type</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Abnormal current</td>
</tr>
<tr>
<td>1</td>
<td>Throttle fault</td>
</tr>
<tr>
<td>0 and 1</td>
<td>Motor phase fault</td>
</tr>
<tr>
<td>2</td>
<td>Motor hall fault</td>
</tr>
<tr>
<td>0 and 2</td>
<td>Brake switch fault (or the brake was applied while turning bike on)</td>
</tr>
<tr>
<td>All lights</td>
<td>Communication fault</td>
</tr>
</tbody>
</table>

Ride as safely as possible

Ride Rad by taking the sensible measures outlined in this section to maximize your safety. Bicycling is an exciting, delightful, and practical way to get around, but like any sport, it involves risk of injury and death. By choosing to ride a bike, you assume responsibility for those risks.

**WARNING:** Incorrect assembly, maintenance, or use of your ebike can cause component or performance failure, loss of control, serious injury, or death. Even if you're an experienced bike rider, you must read and understand the entire manual and any documentation provided for subcomponents or accessories before riding. If you are not sure you have the experience, skills, and tools to correctly perform all assembly steps in the manual and the assembly video at www.radpowerbikes.ca/assemble, consult a local, certified, reputable bike mechanic.
Be thoroughly educated about your bike before riding it

Practise riding your bike, braking, and using the throttle and pedal assist systems in a controlled location before venturing into traffic or other risky conditions.

The electrical system on your ebike (see “Electrical controls and operation” on page 17) offers various levels of power assistance and lighting for different operating conditions and user preferences. Be sure you understand these features before riding. The throttle should provide smooth acceleration when gradually applied. If the pedal assistance, throttle, or lighting is functioning abnormally, intermittently, or not at all, please discontinue using your ebike immediately and contact Rad Power Bikes Product Support for assistance.

Take extreme care getting to know and learning to control the pedal assist and brake systems. Your RadRunner is probably heavier than other bikes you’ve ridden, and it will handle quite differently from lighter bikes, especially when you’re accelerating or decelerating. Learn to maintain a comfortable stopping distance from all other objects, riders, and vehicles at different speeds, conditions, and with varying payloads.

Age and ability requirements

**WARNING:** This ebike is not to be operated by anyone under the age of 16. Children under the age of 16 may lack the necessary judgment and skill to safely operate the ebike, potentially resulting in damage to the bike, damage to other property, serious injury, and/or death. Please also check your local laws, which may require a higher age.

It is your responsibility to know and obey local regulations regarding rider age and other qualifications.

Riders must also have the physical ability, reaction time, and mental capability to understand and obey all local laws governing ebike usage and to manage traffic, variable road conditions, and sudden situations. If you have an impairment or disability (e.g., visual impairment, hearing impairment, physical impairment, cognitive or language impairment, seizure disorder) or any other limitation that could affect your ability to safely operate a vehicle, consult your physician before riding any bike.

**DANGER:** Riding any bike under the influence of alcohol, drugs, or any substance or condition that could impair your motor function, judgment, reaction time, or ability to safely operate a vehicle puts you at VERY HIGH RISK of serious injury or death. Operate bikes and other vehicles only when you’re sober and otherwise physically and mentally prepared to ride safely.

Know and obey all relevant local laws

It is your responsibility to research and understand relevant laws where you ride your bike. Such laws may cover required helmets and safety gear, required lights and reflectors, required hand signals, where you can legally ride a bike (bikes and ebikes may have different restrictions), how fast you can go, what (if any) cargo or passengers you can carry, rider age, and more.

Before using public transportation—buses, trains, etc.—to transport your ebike, check with the relevant transportation authority for any rules governing weight limits, tire widths, lithium-ion batteries, or any other rules that might pertain to ebikes.

When you ride on the road, assume you must, at minimum, follow all of the rules that cars must follow. For additional information regarding traffic and vehicle laws, contact the road traffic authority in your area.

Safety check before each ride

Before each ride, you must check your bike to ensure everything is working properly. Follow the instructions on the “Safety checklists” on page 24 and ground your safety checks in a solid understanding of bike maintenance, which is explained in “Maintenance” on page 23, a section that includes an important chart, “Recommended service intervals” on page 26, which you should follow as well.

If you are ever unsure how to check or maintain your bike or if you find any problems with it, take it to a certified, reputable bike mechanic or contact Rad Power Bikes Product Support.

Ride appropriately for conditions

Always travel at speeds appropriate for local terrain and conditions as well as your experience level. **When in doubt, slow down.**
**WARNING:** Using the front brake by itself can cause excessive stress on components, damage to the bike and parts, loss of control, injury, or death. Always apply the rear brake before applying the front brake, using both brakes for all operations.

Always use a low pedal assist level until you are comfortable with your RadRunner and confident about controlling its power, weight, and responsiveness (e.g., during start-up, turns, and braking) at different speeds, in different conditions, and with whatever payloads you might carry.

**Riding with your headlight on** will make you more visible in any conditions. The headlight will turn on when the bike is powered on. We recommend you keep it on whenever you ride.

**Concentrate on the path ahead.** Avoid potholes, gravel, ice, wet or oily roads, wet leaves, curbs, train tracks, speed bumps, drain gates, thorns, broken glass, and other obstacles, hazards, and puncture-flat risks.

**WARNING:** Crossing train tracks or similar grooved or raised surfaces at a diagonal can make the surface “grab” or deflect your wheel, causing your bike to suddenly get stuck or crash, leading to serious injury or death. Always cross such hazards at a perpendicular angle or, when in doubt, dismount and walk your bike across.

**PATH RIDING**
Be a good citizen of shared-use paths and facilities. Keep your speed reasonable and below path speed limits, pass carefully and kindly. Use your voice and/or bell to signal your presence to others, especially when passing.

**ROAD RIDING**
When riding on streets, obey the same road laws as all other road vehicles as well as local rules governing bike or ebike usage. Sharing the road with other vehicles presents many hazards. Always take these precautions:

- Expect the unexpected such as opening car doors or cars backing out of driveways.
- Be extra careful at intersections and when preparing to pass other vehicles or other cyclists.
- Ride predictably, in a straight line, and with the flow of traffic. **Never ride against traffic.**
- Use correct hand signals to indicate turning, and do so well in advance of turning.
- Ride defensively. To other road users you may be hard to see.
- Increase your visibility by following the tips in "**Low-visibility conditions**" below.

**OFF-ROAD RIDING**
Riding off road requires close attention and specific skills, and it presents variable conditions and hazards. Don't ride off road unless you have the appropriate skills. If you choose to ride off road, wear appropriate safety gear and do not ride alone in remote areas.

**HOT OR COLD CONDITIONS**
Riding, parking, or storing your bike in excessively hot conditions can cause damage to the display and other components. Do not park or store your bike in direct sunlight for extended periods. For more information on safe and recommended temperature ranges for your battery, see "**Battery information** on page 12."  

**LOW-VISIBILITY CONDITIONS**

**WARNING:** Riding at night or in other low-visibility conditions (dawn, dusk, fog, rain, mist, snow, etc.) makes it harder to see and avoid hazards and makes it harder for others to see and avoid you, which increases risk of accidents, serious injury, or death. Wet, slippery surfaces will compound your risk of injury or death. Avoid these conditions whenever possible. If you must ride in these conditions, following the guidelines below can reduce risk.

- Wear reflective and brightly coloured clothing.
- Slow down.
- Use familiar routes with street lighting if possible.
- Ensure tire wall, pedal, and other reflectors are installed and unobstructed.
- Ensure headlight and taillight/brake light are functioning correctly and unobstructed. Use them.
WET CONDITIONS
This electric bike is not meant for use in puddles, heavy rain, or streams. Never immerse or submerge this product in water or liquid as the electrical system may be damaged.

**WARNING:** Riding in wet conditions means slippery hands, feet, and riding surfaces, which greatly increases your risk of accidents, serious injury, or death. Low-visibility conditions (night, dusk, dawn, fog, mist, rain, snow, etc.) will compound your risk of injury or death. If you must ride in wet conditions, following the guidelines below can mitigate risk somewhat.

- Decrease riding speed to help you control the bike in slippery conditions.
- Brake earlier since it will take longer to slow down than in dry conditions.
- Take care to be more visible to others on the road, following the tips in “Low-visibility conditions” on the previous page.
- Remember that road hazards are more difficult to see when wet, so proceed with extra caution.

EXTREME RIDING
There are no appropriate conditions for extreme riding. Although many articles, advertisements, and catalogues depict extreme riding, Rad Power Bikes strongly recommends against such inappropriate and dangerous use of its products.

**DANGER:** Extreme riding puts you at VERY HIGH RISK of serious injury or death. Extreme riding includes but is not limited to jumps, stunts, or any riding that exceeds your capabilities or the strength and integrity limitations of certain bike components and/or otherwise leads to dangerous situations. Never engage in extreme riding or any type of riding that exceeds your capabilities.

Wear a helmet and appropriate safety gear
We strongly advise that you and any passengers you carry wear a properly fitting, certified bicycle safety helmet while riding your bike, which may be required by law in your area.

**Wear appropriate safety gear** including closed-toe shoes. If you are wearing loose pants, secure the bottom using appropriate leg clips or bands to prevent the fabric from flapping and getting caught in the chain or other moving parts. Never use items such as headphones or hoods that can compromise your hearing or field of vision. A local, certified, and reputable bike shop can help advise you on what gear is best for the weather and other riding conditions in your area.

**Maximize your visibility** with bright colours and reflective outerwear or vests. Never compromise your ability to be seen or heard by removing your bike’s reflectors, blocking or removing the headlight or taillight, or removing the bell.

**DANGER:** Riding any bike without a helmet puts you at VERY HIGH RISK of serious head injury or death. Always wear a properly fitted helmet that covers the forehead. Many locations require specific safety devices. It is your responsibility to familiarize yourself and comply with the laws, rules, and regulations where you ride.

Limited warranty and other terms
Your bike’s warranty and other binding legal terms (e.g., terms of purchase, etc.) are subject to change at any time. To view your terms of purchase, go to [www.radpowerbikes.ca/terms](http://www.radpowerbikes.ca/terms). To view the current warranty, please go to [www.radpowerbikes.ca/warranty](http://www.radpowerbikes.ca/warranty).
