# Women in Science

Marie Curie opened the doors to women in the world of science. Her contributions changed the medical community. People started to understand that women had the ability to be doctors, scientists and mathematicians. Although women routinely work in STEM (science, technology, engineering and math) professions, we still are few and far between. So, today, we are going to get curious about other women in science!

With your parents' permission, use the internet or books to research five women who impacted STEM professions.

Write each woman's name and the contributions she made to her profession.

## OBJECTIVE

The student will learn about women in scientific fields.

## COMPETENCY

The student is able to name specific women and describe their contributions to their professions

## MATERIAL

- Books about women in STEM or internet
- Pencil/Pen
- Grace and Grit Women in STEM Page
