Questions?

- 1. Find an open, flat area in which to work. Carefully remove all components from the box and remove banding with a utility knife. Check the parts list to verify package contents.
- 2. Orient the two side ladder assemblies on the floor as shown, then attach 4 standard connectors to the end ladders using the screws provided. The top & bottom connector should fit flush with the top & bottom of the rack. This will be the back of your rack. (figure 1)
 - * Minimize the risk of splitting your ladders by drilling a 1/16" pilot hole before driving the wood screws. For best results, drive the screw most of the way in with your drill, then finish tightening by hand.

3. Flip rack over and attach a standard connector to the top and bottom of your rack using the screws provided. (figure 2)

Page 3

4. Attach the middle screwless connectors so that the top edge of the connectors fit flush with the ladder support pieces on each vertical ladder. Make sure the rack is flat on the floor while attaching the screwless connectors. (figure 3)

Secure the screwless connectors using a finish nail gun to drive a finish nail through the connector into each vertical ladder. Use wood glue for added support. (figure 4)

If you do not have a finish nail gun, drive one of the provided finish nails into each vertical ladder until it is flush. Then, countersink the nail using a nail setter until the head of the nail is about 1/16" below the surface of the wood. Use wood glue for added support.

5. Fill the nail holes using the wood putty provided. Simply push the putty into each hole using your thumb and wipe excess putty off the surface using a damp cloth.

6. Place a dab of wood glue into each notch in the riser supports. (figure 5)

Place the eight 23 15/16" middle supports into place so that each edge of each middle support is flush with the edge of each riser support. (figure 6)

Page 4

7. Insert the three X assemblies. The fit should be snug, not loose. Carefully work each corner into place until the assembly is seated all the way in. (figure 7)

*DO NOT push on the center of the X

If necessary you may need to lightly tap the 4 corners of the X Assembly with a rubber mallet. (figure 8)

8. If you are planning to use this rack with our Top Cap shelving system, you'll need to remove the top two 9 3/4" riser supports and two 23 15/16" middle supports from the top of your rack so that the shelving can seat properly along the top of the rack. You can re-sturdy the rack by driving screws down into the rack from above the Top Cap shelving system. (figure 9)
